Hey Guys,

Why is this thread propigated to 29 different news groups? That is a horrible waste of spectrum.

Please Please dump all of the news groups from your replies except one. alt.ham-radio.digital-voice seems like the right place to me.

Please let this message be the last one to all 29 news groups.

Bill

2553. AMSAT mail forwarding

Newsgroup: rec.radio.amateur.space

Several years ago I signed up somewhere to have AMSAT forward mail addressed to k7rie@amsat.org to my real mailbox. I can no longer remember where I signed up for this service.

Does anyone know how to do this?

I have changed my call (vanity program) and what to have mail sent to the new call forwarded.

Thanks,

Bill

I can pretty much believe that. After reading those it makes me wish
I had a daughter so I could forbid her to marry a lawyer. :)

>>Why is it that when you tell a 'joke' about an Irishman it is called
>>tasteless; when you tell a joke about a black it is called racist, and
>>when you tell a joke about a lawyer it is called funny?

Even though you didn't post this, I missed the original response so here
goes:

The reason it's funny is because by and large most lawyers are lower
than slime.

Tony

I'm trying to find the formula used in calculating the
azimuth and elevation for an antenna given a geostationary
satellite's longitude.

Typically, you must input your own antenna lat/long and
possibly elevation as well.

If you know it, I'd sure like to see it please.

Thankx!

I am not politically minded at all. I hold no views on any party - whatever they call themselves.

I am worried that in this climate of free opinion, that people are trying to censor the right to express them. I don't think it matters if we agree or not - but are we not turning into those we dislike/disagree with by dictating to them our views and not allowing them their right to express theirs?

Just a thought.

Three words:

Don't go there.

Yes, it's over. Way, way over.

If you're serious, please see:

http://pathfinder.com/Netly/daily/960607.html
http://www-leland.stanford.edu/~llurch/neo.htm
http://www.nizkor.org/ftp.cgi?people/k/kleim.milton

talk.politics.natl-socialism was dropped, too, but for rather different
reasons. soc.politics.anti-fascism is going to lose for many of the same
reasons that rec.music.white-power did, but the misc.activism.anti-fa.*
hierarchy, which will be proposed Real Soon Now, is expected to pass
without much controversy.

The ARRL book "The Satellite Experimenter's Handbook" has a graph on page 6-13 that shows how to compute AZ/EL for geosynchronous sats. The book I refer to is 2nd edition, 2nd printing, copyright 1990.

Gee, good for you Jim! How much did he charge you?

Don't you ever wonder about the screwball laws being written everyday
to restrict and regulate our laws? Do you think they're written by
Joe Concerned Citizen?

How about the financial impact lawyers have on our everyday lives?
Every time they win some humongous settlement in some pea brained
case it ends up costing the taxpayers and consumers.

Ever look up justice in the dictionary? How about all those crooks and
murders that get off every year due to some "technicality"? Ever hear
of the case of the divorce where the mom was suicidal and mentally
unable to cope without anti-psychotic medication and the father was
"normal"...mom got custody.

The responses you see here are direct reflections of our own experiences
and disdain for lawyers. When one threatedned to sue me, I posted it
so the world could see what they are really like.

Sorry you don't agree that the world would be a safer and cheaper place
without them.

Hi there,

I had always an idea to make a software program that can generate morse keying
using two keys on the keyboard of a PC, like a bug.

Wonder if there are peoople with a similar idea, or maybe people that have
seen a program that is able to do just that.

A kind of keyer emulator using only two keys (one for DASH and one for DOT)
and iambic operation.

Thanks !!!

Regards

Hello all,
I am thinking of buying some coaxial cable for a line 20 mt. long at
430 Mhz.I have the problem that the cable must go inside a tube to
reach the roof.At a certain point the tube makes an angle that so far
hasn't brought me problems with RG213 cable .I have seen that Marlow
50/20 has the same external dimension of RG213 but I also know that
the bending curve may be different.Is 50/20 really suitable for a line
like that and in case, will its bending curve allow me to fit it
properly into the tube that goes to the roof ?
Thanks in advance

I think we have to worry more about all the space junk floating around in orbit alot more than meteors. But then again it depends how high or low of an orbit P3D will be. It's orbit will be pretty high I understand, I'll have to check on it though..

For my two cents.

In the U.S. I think we need to worry more about congress-critters simply
mandating the FCC auction off the spectrum used for P3D especially the
2.4 GHz bands. Or even worldwide the ITU reallocating spectrum to
something else, more than worrying about collisions with whatever in
space.

I recently saw what was described (here) as the first verified collison
with damage to a satellite. Pretty low odds it seems to me.

There is a lot of stuff up there, but WAY more empty space.

Jim

> The anti-gun control groups have a snappy slogan that basically says,
"guns don't cause crime any more than flys cause garbage". Without
debating the validity of that particular statement, I think that it's
unfair to blame lawyers for the state of our society. I'm not suggesting
that I agree with the strange things that go on in the "legal system"
(anyone collecting oxymorons??).
On the positive side of this topic, you might note that the Feds have now
decreed that aircraft manufacturers will only be liable for 18 years
after their product has been sold instead of eternity. Common sense does
prevail eventually.
Another point to consider is that many of these unbelievable judgements
have been rendered by juries!! Has the point been reached where we can
no longer trust the juries??
Our society has serious problems and sleazy lawyers are a symptom, not
the problem itself.
Honest, hardworking lawyers do exist and are a valuable commodity when
someone decides to rain on your parade. And yes, they're not
necessarily cheap, but most will try to keep costs down when they know
you're not well-off.

2578. NORAD Two-Line Orbital Element Sets (TLE907)

Newsgroup: rec.radio.amateur.space
Date: 1996-12-03 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <57vr41$9g@blackbird.afit.af.mil>
Source record: 20753

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

2579. NORAD Two-Line Orbital Element Set: Space Shuttle (96337.33333333)

Newsgroup: rec.radio.amateur.space
Date: 1996-12-03 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <57vqo0$93@blackbird.afit.af.mil>
Source record: 20754

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

2580. NORAD Two-Line Orbital Element Set Format

Newsgroup: rec.radio.amateur.space
Date: 1996-12-03 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <57vr7n$9s@blackbird.afit.af.mil>
Source record: 20755

As a service to the satellite user community, the following description of the NORAD two-line orbital element set format is uploaded to sci.space.news and rec.radio.amateur.space on a monthly basis. The most current orbital elements from the NORAD two-line element sets are carried on the *NEW* Celestial WWW,

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. In addition, element sets (updated daily) and some documentation and software are also available via anonymous ftp from

archive.afit.af.mil (129.92.1.66)

in the directory pub/space.

==========

Data for each satellite consists of three lines in the following format:

```
AAAAAAAAAAAAAAAAAAAAA
1 NNNNNU NNNNNAAA NNNNN.NNNNNNNN +.NNNNNNNN +NNNNN-N +NNNNN-N N NNNNN
2 NNNNN NNN.NNNN NNN.NNNN NNNNNNN NNN.NNNN NNN.NNNN NN.NNNNNNNNNNNNN
```

Line 0 is a twenty-two-character name (this change is being made to be consistent with the name length in the NORAD SATCAT).

Lines 1 and 2 are the standard Two-Line Orbital Element Set Format identical to that used by NORAD and NASA. The format description is:

```
Line 1
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
10-11 International Designator (Last two digits of launch year)
12-14 International Designator (Launch number of the year)
15-17 International Designator (Piece of launch)
19-20 Epoch Year (Last two digits of year)
21-32 Epoch (Julian Day and fractional portion of the day)
34-43 First Time Derivative of the Mean Motion
or Ballistic Coefficient (Depending on ephemeris type)
45-52 Second Time Derivative of Mean Motion (decimal point assumed;
blank if N/A)
54-61 BSTAR drag term if GP4 general perturbation theory was used.
Otherwise, radiation pressure coefficient. (Decimal point assumed)
63-63 Ephemeris type
65-68 Element number
69-69 Check Sum (Modulo 10)
```

(Letters, blanks, periods, plus signs = 0; minus signs = 1)

Line 2
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
09-16 Inclination [Degrees]
18-25 Right Ascension of the Ascending Node [Degrees]
27-33 Eccentricity (decimal point assumed)
35-42 Argument of Perigee [Degrees]
44-51 Mean Anomaly [Degrees]
53-63 Mean Motion [Revs per day]
64-68 Revolution number at epoch [Revs]
69-69 Check Sum (Modulo 10)

All other columns are blank or fixed.

Example:

NOAA 6
1 11416U 86 50.28438588 0.00000140 67960-4 0 5293
2 11416 98.5105 69.3305 0012788 63.2828 296.9658 14.24899292346978

I don't know the odds of a meteor hitting a satellite, (pretty low I
would guess.) but NORAD has the orbits of EVERYTHING going around the
Earth plotted and documented. This information will be taken into
account when Phase 3-D's orbit is set up.

Let's settle this one for once and for all. The Simtel collection is
available all over the place and should be very well know:

"Simtel.Net : List of authorized FTP mirror sites

Simtel.Net, located at Walnut Creek CDROM, is the origin point of
Keith Petersen's world-wide distribution network for Shareware,
Freeware, and Public Domain programs for MS-DOS, Windows 3.x, and
Windows 95. It has more mirror sites than any other archive on the
Internet. Its web pages are also mirrored on many servers around the
world.

FTP.Simtel.Net is the name of the primary distribution site for these
collections. It is actually several ftp sites arranged in a rotating
pattern of IP addresses to help balance the load and to avoid access
problems due to network outages and simultaneous user limits. At the
present time ftp.ou.edu and oak.oakland.edu are the primary sites. Our
files are located in the /pub/simtelnet directory tree on these hosts.

The following sites are authorized mirrors of Simtel.Net as of the
revision date at the end of this document. This list will be
frequently updated as new sites are added.

so what? let them have their say, along with anyone else who wants to
form a newsgroup. Whatever you (or I) may think of them, they're just as
valid as anything else - just check out some of the crap in alt.*

As long as they keep to themselves, I think they should be left alone. If
they start a crossposting campaign, they'll get stomped on.

Try "http://www.rig.org.uk/index.html"
You may need to leave the "/index.html" off, sometimes when I include
that, it gives me a DNS not found.
Good luck.

I too once needed a lawyer, and he came thru for me. I think the problem
is the
bottom half of the class. This lower 50% has contemp for the law, and
they are
who the lawyer joke are for. Basically, it is the Judges who have my
contemp, but
then they are lawyers also. And if you say, "What about the judge in my
case, where
I won", I will just say, at one point, the Judge fell asleep, and I won
in spite of him, mainly because of the strength of my lawyer.

You are, to some degree, correct.

The proliferation of lawsuits really isn't the fault of the Trial
Lawyers Association. In a sense, they are merely providing a service
to accomodate a demand for legal services in our country.

It is the desire to "get rich quick" (and sueing someone seems to
be a way of doing that with little to no risk if you can get a
lawyer to take your case on a percentage basis, which most will)
that the American people have today [inherently lazy bastards
they are -- the Japanese were right -- they want to lay around
with the good life, no work, have everything paid for them by
someone else -- basically an extension of the welfare-state
mentality that permeates this country today].

>refer to is 2nd edition, 2nd printing, copyright 1990.
>--
>Gotta FLY or gonna Die !
> Ask me about my
> Aeronca Super Chief !

.... if you really want a formula:

If A=latitude of earth station (+ve for north, -ve for south of
equator)
B = longitude east of the earth station minus the longitude east of
the satellite
m = 6.61 (the radius of the geostat. satellites orbit divided by
the equatorial radius of earth.
s = square root of (1-sqr[cos(A)*cos(B)])
where sqr = square of
t = [m*cos(A)*cos(B)]-1

then Elevation angle = inverse tangent[t/(m*s)] degrees

and if you're in the northern hemisphere,
azimuth angle = 180+inverse tangent[tan(B)/sin(A)] degrees

if you're south of the equator, forget the 180 term in the azimuth.

Note that the eqn for elevation gives the geometric value. Taking into account atmospheric refraction, you get:

True elevation = (EL + sqr.root[sqr[EL] + 4.132])/2 degrees

where EL = the geometric elevation found using the first elevation formula above.

Taken from pg.411-412, Satellite to Ground Radiowave Propagation by J. Allnutt.

Hope this helps,

Mitchell.

Jay, this gives me the oportunity to ask a question I've wanted an
answer to for a while. If an NG about racism was defeated, how were the
pedophilia & binaries.teen.sex(or whatever it's called) & like groups
allowed to come into being. My first thought was that they were
originally intended f/discussion, but then became overridden
w/pedophiles. This scenario, though, doesn't explain the binary NGs
that feature child/teen sex.

And an ICE, a good disassembler, a logic analyzer with a *deep* FIFO,
an EPROM burner and a PLA programmer, etc. Just be sure to keep that
soldering *gun* well away from the unit. There's nothing inside that
can tolerate that kind of abuse.

You *can* reverse engineer the unit if it isn't too badly fried,
but it'll be a lot easier to do it now while it is working rather
than waiting for a custom ASIC or EPROM to fail. Of course if AEA
releases source, you won't need any of that, other than the burner
and PLA programmer.

2603. AIRCOM cable inquiry

Newsgroup: rec.radio.amateur.space
Date: 1996-12-04 00:00:00 UTC
From: rmander@wonderland.linux.it
Message-ID: <584o8m$63j@server-b.cs.interbusiness.it>
Source record: 20678

Hello all,
I wonder if anyone out there has used the AIRCOM cable for satellite
purposes.I was told that the condense could be a concern for this
cable since the inside isolator is mostly air.

You're mostly right, Rob .But indeed, I don't want to get out of
amateur radio.I only have to get used to be a satellite amateur radio
not because of the cost of the new setup but just because:
- I live in a condominium and fought *a lot* to put a three elements
beam
- The roof is not so good so I had a very bad time in planning
everything and actually put everything up.

Now, I absolutely can not put up also a satellite system without
removing the existing HF beam because of the limited room up there so
my great fear is to find myself in a nightmare situation in case of a
P3D failure.The accessibility of the roof is bad, a 3el beam is heavy
, I should call some friends of mine to help and more, I must pass
through my neighbor's penthouse to go to the roof ...

With a satellite system it should be easier for me to access antennas,
make modification by myself , etc.

Also let me say that it'll be very unlikely that any government will
take all the HF bands, at least much less likely than a satellite
damage !

2605. Mirage Preamps - WEB Pages ??

Newsgroup: rec.radio.amateur.space
Date: 1996-12-04 00:00:00 UTC
From: Mike Tatum <miket@cybatek.dungeon.com>
Message-ID: <01bbe237$308dd220$ae9482c1@cybatek.dungeon.com>
Source record: 20680

Hi All!

I've had the Mirage Preamps recommended to me for SAT usage as aparently
they have a gain of 25db and only 0.8db noise (??)

Can anyone tell me where I can get more details of these preamps, or even
if there is a WEB page from the manufacturer ???

Also, if you would recommend any other Preamp for the job!!

Thanks ...

Mike de G1SYT ...

I personally think that the best thing we could do was to give congress,
(etc.) 5 years to re-touch all of the laws to make them understandable
by the average product of our school system. It would be their choice as
to modifying the laws or improving the education system! ;o)

If it has been so poorly written that only a lawyer can read it, and two
lawyers come to different opinions of what it means, then it should not
be binding! (Think what that would do the the tax structure).

I don't claim to understand the Usenet all to well. First time I tried
it, I got well over 300+ messages a day. I dropped it quickly.
However, has the addition of new newsgroups always been democratic? Or
was it republic, where anyone with a Usenet server could create a group?
If these alt.binary.craddle_rape newsgroups came around before the
democratic system, then they would have a basis to stay. My question is,
why haven't they been taken down?
I'll admit, this is against my usual stand of "The net is a wilderness,
take as is, or get out" view of the net, but I do believe in limits, and
NGs like aformentioned are beyond them.

Good point however I think they can only track objects starting at a
certain size, I thought I heard softball sized and larger. Anything smaller is
not seen. This is a real problem as evident by the shuttle years ago getting
hit by a paint speck putting a 1/4" gouge in a window. I wonder how many hits
Mir has taken all these years?

2619. SbFFT1.2 SB16 spectrum & filtering - BETTER GRAPHICS SUPPORT

Newsgroup: rec.radio.amateur.space
Date: 1996-12-06 00:00:00 UTC
From: kevinm@eden.com
Message-ID: <588536$1s5$6@boris.eden.com>
Source record: 20694

I have uploaded to Simtel.Net:

http://www.simtel.net/pub/simtelnet/msdos/hamradio/sbfft12.zip
ftp://ftp.simtel.net/pub/simtelnet/msdos/hamradio/sbfft12.zip 1558410 bytes

sbfft12.zip Sound Blaster spectral display & filtering

Features:
* Sound Blaster 16 (or 100% compatible) input and output.
* Band widths of 2K, 4K, 8K or 16K Hz.
* Spectral resolutions of 1 Hz to 16 Hz per pixel.
* Display of power spectral density with any of 4 color maps in either
linear or logarithmic scale.
* Define and use up to six filters simultaneously -- band pass, band
stop, low pass, and high pass. Filters have 25 Hz skirts at 3 to 50
dB points.
* Filters are defined graphically by mouse movement based upon the
displayed spectrum. Once you see a signal, you can quickly define a
pass or stop filter around the signal by clicking and dragging the
mouse.
* Net filter passband is displayed at all times.
* Filters can be selectively enabled and disabled by a single keystroke
or mouse click.

Special requirements: DOS 3.0 or higher, SB16 or 100% compatible, SVGA,
VESA 640x480 & 1024x768, mouse, 486/66 or higher to display spectra,
Pentium 120 or higher to filter.

Changes: Differences from version 1.1:
* Compatible with many more graphics cards.
* Full screen mouse support with faster response at high resolutions.
* Mouse click to enable/disable and delete filters.
* Defaults are assumed for the Blaster environment variable.
* Support for PCX graphics files instead of TIFF.

Freeware. Uploaded by the author.

The ultimate Christmas gift for that special someone. The Star Directory gives you the opportunity to register and name individual stars in someone's honor. A beautiful registration certificate is issued which includes the star location coordinates, and a map is provided.

In addition, The Star Directory will include each registered name in their forthcoming publication, Claiming Your Part of the Universe which will then be copyrighted and filed by The United States Copyright Office. All customers will be individually notified when this has been completed.

This is gift which, like stars themselves, is guaranteed to provide more than a lifetime of enjoyment! The gift may be passed on from generation to generation, further enhancing it's value. You will not find this gift available in retail stores. Besides being a beautiful and innovative gift, it makes a great conversation piece. How many of your friends or loved ones can say an existing, real star has been named in their honor?

For further details and to Order, call:
1-800-479-9476 (If calling within the U.S.A.)
1-310-490-6747 (If calling from outside the U.S.A.)

Thank 's for this real nice programm .. it's what I have dreamt of,
for a long time. .. but I get kicked out everytime I try starting
it. Reason: the prog whants to run in a special graphics mode..

I have the ELSA 1000TrioV installed with 2MB of RAM .. and no special
driver loaded under DOS ... (maybe) a stupid question .. how can I fix
it. What do I have to do to run the prog.

Maybe anybody out there has encountered the same problem ?
My new computer surely is capable of running sbfft (P133 32MB-ram)
It just refuses to do so becouse it does not find the adequat
grahpics mode ..

tnx fer ur knd hlp 73's de Klaus

~~~~~~~~~~~~~~~~~~~~~~~~
Bob, at this length and freq, you probably need to use
a coax that won't go thru the pipe. At least 1/2" Heliax
for 430MHZ and 20m. consider another route.
Ken K5MBV

There is also an idea that messages are best posted to appropriate
newsgroups. The one I am reading this in, for example, is
comp.lang.java.programmer, where it has very little connection to the
topic (theoretically) under discussion. If you could look for a way of
trimming down the list of groups you post to, this might be helpful.

Thanks.

Pardon the parody but...

Aren't you done cluttering the newsgroup yet?
Enough complaints already! Whiizz........

Just because *you* can't figure out an application that uses the
FREEWARE, does not mean it has no use to others interested in weak
signal satellite work.

I think this software is great, and applaude KW5Q for literally giving
us free this excellent package that would otherwise cost thousands of $s
if it were to be purchased from a commercial software house.

Getting ready to download and looking forward using the newest.

Jim

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

Does anyone know of anyone using Video Conferencing on computer/internet in conjunction with amateur redio? I have been in contact with hundreds of people from around the world on Cu-Seeme and have run into only one ham. Is there a freq. HF or VHF where hams may hang out that use both modes..computer and radio. I believe this would be a natural progression from Slow Scan. We now can SEE the people we are in QSO with.

If you are interested in setting up a sched. and have Video COnferencing capabilities or are just interested drop me an e-mail,

73's

AMSAT-Deutschland e.V. (Germany)
Press-Release

Telecommunications Satellite AMSAT-OSCAR 13 Burned Up On Re-Entry

On December 5th, 1996, the international telecommunications satellite AMSAT OSCAR-13 burned up upon re-entering the Earth's atmosphere. AMSAT OSCAR-13 was successfully launched on June 15th, 1988, into a highly elliptical orbit on board the first test flight of the new European ARIANE 4 rocket. Over the years, AMSAT OSCAR-13 has enabled direct radio contacts among the world-wide community of nearly 2 million radio amateurs.

AMSAT OSCAR-13 had been constructed within four years by an international project group under the leadership of Dr. Karl Meinzer of AMSAT-Germany. AMSAT (Amateur Radio Satellite Corporation) is a world-wide alliance of approximately 6000 scientists, engineers, technicians and radio amateurs who voluntarily build and operate scientific and communications satellites.
During its operational period, AMSAT OSCAR-13 was monitored and controlled by a group of ground stations in Germany, the United Kingdom, Australia, New Zealand and the United States of America.

Upon its re-entry, AMSAT OSCAR-13 has had a lifespan of over eight years. Originally the mission had been conceived to last only seven years. Overheating of the satellite due to air friction in the upper atmosphere resulted in the destruction of the solar panels on November 24th and the consequent interruption of all radio links. Prior to this event, the on-board monitoring system had transmitted much data relating to the satellite's behavior in the upper atmosphere to ground stations for evaluation.

The decay of the orbit was caused by the gravitational attraction of the Sun and the Moon. The elliptical orbit was stretched so that the satellite gradually approached the Earth which lies at one of the two focal points of
the ellipse. This phenomenon motivated AMSAT to develop new analytical and computational methods to allow long term predictions for future satellites on similar, highly elliptical orbits.

The orbit of the next satellite, AMSAT Phase 3-D, has been calculated using
these new methods and will therefore be more stable over the long term. AMSAT Phase 3-D is scheduled to be launched into space during the first half of 1997 as apparently the only satellite payload for the second test flight of the new ARIANE 5 launcher.

Radio Meteor Observation Bulletin No. 40 December 1996

1. FORWARD SCATTER METEOR OBSERVATIONS

Observing method: listening

Observer: E.P.Bus
Location: near Salamanca, Spain (5 26' W, 41 12' N)
Frequency: 87.9 MHz
Transmitter Location: Lousa, Portugal, 50 kW, distance 268 km
Antenna: Yagi, 3 elements, Azimuth 242 o (=WSW), elevation 36 o
Receiver: Bearcat UBC 177XLT Scanning Radio, sensitivity: 0.5 microvolt
Observing method: Listening

Leonids 1996

Long duration reflections >1 sec during one hour intervals
starting at 4h UT:

1996 UT
Nov 17 4h 5h 6h 7h 8h

Refl 23 13 16 35 23

The most favourable antenna geometry for detecting Leonids is around
4h 30m UT. Unfavourable antenna geometry between 6h45m and 9h15m UT.
After correction for Observability Function (after Hines) the Leonids
showed the strongest activity since 1993. A small maximum was monitored
around 4h45m UT (Solar Longitude 235.16 degrees) and a high maximum
around 7h25m UT (Solar Longitude 235.29 degrees), shortly after that
the Earth passed the node of the orbit of comet 55P/Tempel-Tuttle
(235.255 degrees). Previous maxima were monitored at Solar Longitudes
235.82 degrees in 1994 and 235.32 degrees in 1995. (All longitudes for
Epoch 2000).

Peter Bus / via Ton Schoenmaker

Observer: Maurice De Meyere
Location: Deurle, Belgium (3 37' E, 51 00' N)
Frequency: 66.51 MHz
Transmitter locations (all stations of more than 10 kW):
66.35 MHz, Klaipeda, Lithuania 12 kW, 05h00-22h00
66.41 Siedlce Poland 39 04h57(Sun05h57)-02h00(Sat03h00)
66.47 Viesintos Lithuania 12 05h00-22h00
66.50 Sofia Bulgaria 10 24hrs
66.56 Poznan Poland 56 04h57(Sun05h57)-02h00(Sat03h00)

66.62 Budapest Hungary 100 24hrs
66.68 Valmiera Latvia 20 06h00-22h00
Antenna: crossed Yagi, 4 elements, astronomical azimuth 270 o (= East),
elevation 27 o
Antenna amplifier: 25 dB max level 90 dBmuV
Receiver: commercial, Progresson 447A, TESLA (Bratislava)
The receiver was calibrated with a Marconi TF2008 signal
generator. Sensitivity: 5 muV (modulation frequency
1000 Hz, frequency sweep 38 kHz) at (S+N)/N = 20 dB

Observing method: automated setup, 150 samples/second, 8 bit resolution.
[Time and details of all individual meteor reflections are stored
on file in the University of Ghent format (Prometeos), and are
available for further analysis. Reduction software for DOS and
Windows available].

November 1996
Leonids

Raw counts of reflections with a duration of at least 0.027 s
during one hour interval starting at UT:

```

Notes:
. local time = UT + 1 hour
* intense Leonid activity during the morning of Nov 17.
The Leonid radiant rises at 22h30m, and sets at 14h UT.
Best forward scatter conditions for this setup between 7h and 8h UT.
Peak activity on Nov 17, 4h UT.

. Radio-amateur comments:
Johan, PE1LAU, Netherlands: "Leonids were very nice this time"
(Nov 17, 7h-11h UT). I heard only few pings (=short reflections), it
were every time bursts from 10 to 80 s at least!
At one moment I thought it was like Es signal".

Lasse, KP02, Finland: "what fun I had on Sunday morning (=Nov 17)...
Great signals between 3h43 UT and 4h05 UT".

Steffen, DD0VF, Dresden: "long burst on Nov 17, 3h 06 UT, 123 seconds...
In the late morning of Nov 17th the longest burst was about 2 minutes
with 4 different stations".

Maurice De Meyere

Observer: Werfried Kuneth
Location: near Villach, Austria (13 37' E, 46 45 ' N)
Antenna: 3 element Yagi
Receiver: AR-8000 at 48.25000 MHz, SSB mode
Narrow passband filter, no preamplifier.
Transmitter: 250 kW TV video carrier in Madrid (Spain),
distance 1550 km, southwest.
Observing method: automatic setup using FFTDSP42t software by AF9Y to
record the audio signal. 20 channels of 2 Hz width are used for
meteor identification.
More details see <http://www.net4you.co.at/user/kuneth/info.html>

This month I will report reflections duration (instead of reflection
time percentage).

Raw counts (minimum reflection duration of 0.5 seconds)

Nov | UT

The Leonids showed up very well on November 17, and best in the 10 seconds
(the longest) counts.

Notes:
. a dot (.) after the number stands for a lower observation period: 20-40 min.
. blank value means either few or no data available, interference,
power failure or transmitter shutdown.
. local time conversion: 1 hours ahead of UT (07h00 UT is 08h00 local)
. lots of thunderstorms on Nov. 15 and 16.

Werfried Kuneth

Observer: Kimio Maegawa
Transmitter: 50 W CW 53.7500 MHz
Transmitter antenna: 2 element Cross Yagi 4dBi, zenith
Transmitting Location: Sabae city (136 11' E, 35 56' N)
Receiver: IC726 500 Hz BW SSB, sensitivity -150 dBm sensit
Receiver antenna: 3el Yagi 7 dBi (70 deg, SE direction) height 10 m
Receiving Location: Ohno city (136 53' E, 36 00' N)
Data processing : Receiver output is fed into DX2-66 MHz PC and analyzed by
AF9Y's FFTDSP42 software.
Then stored every 4.22 min automaticaly with GIF format.
Play back GIF files and count echoes manually by the doppler
shift rejecting tropo signal or airplane echo.

Hourly echo counts
A: all echoes
L1: long echoes (T > 2.5 s)

L2: long echoes (T > 15 s)

Kimio Maegawa

Observer: Ton Schoenmaker
Location: Roden, Netherlands (6 26' E, 53 08' N)
Frequency: 72.11 MHz
Transmitter location:
Wroclaw, Poland, 130 kW, distance 756 km
Antenna: Horizontal Yagi, 5 elements, geographical azimuth
105 degrees (ESE), elevation 15 degrees

Receiver: Homemade convertor 65-67 MHz to 28-30 MHz + Barlow-Wadley
0-30 MHz receiver; total sensitivity 0.3 uV for 20 dB S/N
with a bandwidth of 3 kHz
Observing method: Servogor strip-chart recorder, 120 or 600 mm/h

Leonids (yes!) and Alpha-Monocerotids (no!) in November

The numbers below give the hourly percentage of total meteor reflection
time during a few nights around the Leonids and the Alpha-Monocerotids.
Only reflections longer than 10 seconds were taken into account. A broad
maximum of Leonids was observed between 01h and 09h UT on 17 November 1996,
but also the observability function (Hines, Steyaert) was most favourable
during that period.
During the above-horizon-period of the radiant of the Alpha-Monocerotids
no activity was measured on 20/21 November.

Nov | UT

Dead time (in 0.1 minute) of observation due to persistant meteor echo.
For example, 116 means 11.6 minutes.
All dead times observed zero for 04h - 14h UT.

2. ABOUT THE RMOB

The RMOB is an independent initiative of some workers in the field of radio
meteor scatter observations and data reduction. It started in August 1993
in order to spread rapidly the Perseid results via E-mail. Since then, it
has appeared monthly, and it has gradually been expanded. In regularly
publishing summaries of observations, potential radio observers are kept

up to date of existing installations, possibilities and limitations of radio meteor observations. In the long run, there should be sufficient observing stations to cover the whole globe, allowing to detect stream outbursts which may remain unnoticed visually.

RMOB contains typically: summaries of recent observations, equipment data, first results of stream activity by radio methods, relations between radio and optical meteors, references to other publications in the field of meteor astronomy and radio scatter techniques, announcements of meetings, short questions and answers, non-commercial (second hand) sale of radio equipment, available software.

Contributors are mentioned, and interested persons are asked to contact them directly.

RMOB can be copied freely in unabridged and unmodified form. Extracts should indicate the source (Radio Meteor Obs Bulletin, month and year).

If you want to subscribe (or un-subscribe) to the E-mail distribution list, please send a message to C. Steyaert.
Those not having access to E-mail can obtain a printed copy free of charge from J. Van Wassenhove (current or back-issues).

Hello and thanks for reading this...
I have updated my Amateur Radio Satellite Web Page and would like to get
some more input about
the layout. Let me know what you think...

***EASY MONEY - FAST !!!!!

THIS IS THE FAIREST MOST WAY HONEST WAY I KNOW TO SHARE THE WEALTH !

Would you like to make thousands of dollars, quick, legally, with NO CATCH? then keep reading......please take 5 minutes to read this article it will change your life, just like it did mine.. it's true! you can make up to $50,000 in 4 - 6 weeks, maybe sooner!

I SWEAR I'M NOT LYING TO YOU.AND THIS IS NOT A SCAM! if your interested then keep reading;if your not, i apologize for wasting your time.

this is my second time i am doing this. the first time was 7 weeks ago and i have received $48,000. the first week i received $37 dollars,the second week i received $1,364 dollars and by end of the 3rd week i had received $12,856 dollars and to this date i have received $48,074 and money is still coming in.

when i first saw this article i though it was some kind of scam, but for $5 dollars and 5 stamps i thought i would give it a try.after buying a new car,new computer and putting a down payment on a house i relized this was the best $5 dollars i ever spent!

this process is very simple, and it consists of 3 easy steps:

(this whole process will take only a few hours of your time)

STEP 1: get 5 separate pieces of paper and write the following on each sheet of paper..."PLEASE PUT MY NAME ON YOUR MAILING LIST.YOU ARE NUMBER 4." get 5 $1 dollar bills and place one inside of each paper that you just wrote on,and fold each piece of paper so the bill will not be seen in the envolope (otherwise,nosey people who like to steal envolopes with money in it will get yours). put one paper inside the envolopes and seal it. do the same for all 5. you should now have 5 envolopes sealed,each

with a piece of paper and a $1 bill stuffed inside the paper.make sure those words that were stated above are stated on each paper. what you are doing is creating a service by this, this is PERFECTLY LEGAL. now then, mail the 5 envolopes with the paper and $1 dollar bill in each to the following addresses:

1. Dan Wood

1201 #A Anderson ST

San Clemente, CA 92672

2. S. Stapleton

6329 HWY 135 N.

Lake City, AR 72401

3. C. Crafton

1231 SW 61st Terr. #2

Gainesville, FL 32607

4. Michael Barratt

27 Park Ave

Poughkeepsie,NY 12603

5. Louie Page

2907 W. Gregory

Chicago, IL 60625

STEP 2: now take the first name off the list that you see above, move the other 4 names up (5 becoming 4 , 4 becoming 3 ect.)and put your name as number 5 on the list. you can slightly alter this article if you need to, editing what you need to edit.

STEP 3: post your amended article (with your name at number 5 of the list) to at least 200 newsgroups (i think there are 18,000 of them). all need is say, at least 200. HOW TO DO THIS: IF YOU HAVE NETSCAPE DO EXACTLY THE FOLLOWING:

1) click on any news group like normal,then click on "to news",which is on the far left when your in the newsgroups page. this will bring up a box to type a message in.

2) leave the newsgroup box like it is, change the subject box to something flashy like, "NEED CASH $$$" ,"READ HERE $$$" or "FAST CASH $$$!!.

3) tab once and you should be ready to type. now, retype (only once) this whole article,execpt to insert your name at #5, and remove #1 off the list, plus any other small changes you think you need to make, keep almost all of it the same.

4) when your done typing the whole article, click on file in this box, right above send, not where it says netscape news on the first box. click on "save as" when your under file. save your article as a text file to your c: or a: drive. do not send or post your article until you do this. once save move on to number 5 below.

5) if you still have all of your text, send or post to this newsgroup now by just clicking send, which is right below file, and right above Cc: .

6) here's where your going to post all 200. ok, click on any news group then click on "to news", again in the top left coner. leave the newsgroupss box alone again, put a flashy subject title in the subject box, hit tab once your in the body of the message, then click on "attachments", which is below the subject box. you will get another box to come up. click on "attach file" then find your file below that you have saved; click once on the file,and then click open' now click on ok; if you did this right , you should see your file name in the attachments box, and it will be shaded.

if you use explorer its just as easy.... holding down the left mouse button,highlight the article. then press "ctrl" key and the "c" key at the same time to copy this article. then print this article for your records to have the names of those you will be sending $1 bills to. next go to the news groups and press "post an article", a window will open. next go to the news groups and press "post an article" a window will open. type your headline in the subject area and then

click in the large window below. press "ctrl" and the "v" and the article will be placed in the window. if you want to edit the article do so and then highlight and copy it again.now everytime you post the article in a new newsgroup you only have to repeat "ctrl" and "v" and press post.

7) THATS IT. each time you do this , all you have to do is type in a different newsgroup,so that way, it posts to 200 different newsgroups ..you see? now you just have 199 to go!! (dont worry, each only takes about 30 seconds once you get the hang of it).REMEMBER 200 IS THE MINIMUM.

THE MORE YOU POST THE MORE MONEY YOU WILL RECEIVE !!!

AND THATS IT !!! THATS THE ONLY 3 STEPS THERE IS !!!

you are now in the mail order business and will start receiving your $1 envolopes from various people all over the world within days. hint: you may want to rent a po box eventually because of all the mail you will be receiving. JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT, PLEASE.

LET ME TELL YOU WHY THIS SYSTEM WORKS !!!!

out of every 200 postings, lets say i only receive 5 replies (which is actually very low!) so i made $5 dollars with my name at # 5.

now then,each person that just sent me $1 makes, say only 200 postings now with your name at #4, which is a total of 1000 postings,not including yours too. 50 people send you $1 now; thats $50.00 you just made! now, then your 50 agents post 200 each with your name at #3,or 10,000 postings (50x200). average return is 500 a $1 each is $500.

they make 200 postings, which is 5,000 returns at $1 each, which is $5,000 dollars! and finally, 5000 people make 200 postings which with your name at #1. you now get a return or $50,000 before your name drops off the list. and thats if everyone only makes 200 postings and if only 5 people respond !!!!

no like me when your name drops off the list just find the latest

posting and start over again..YOU WONT BE SORRY !!!!

2641. DX and Satellite Cyberscheds available at http://www.sarrio

Newsgroup: rec.radio.amateur.space
Date: 1996-12-07 00:00:00 UTC

This is a new use of the WWW that can benefit ham radio operators throughout the world.

You can now schedule contacts with hams all over the world simply and easily by using the WWW and e-mail.I have set aside a section of my web site http://www.sarrio.com for hams to post their request for over-the-air schedules. Included in each posting is a place to list the posters specific ham radio contact needs (countries, zones,IOTA, grid squares ect...). The postings will also include an e-mail link that will allow hams that read the posts, to easily request an over-the-air schedule.

How Can Cyberscheds work for me?

Do you need a certain state to complete a WAS award? Are you just a few countries away from a DXCC? Are you a QRP operator looking to make contacts with hams all over the world? Are you a DX station that has grown tired of the stateside pile-ups on 20 meters? Or are you going mobile into a hard to work county?

In all the above examples you could have prearranged cyberscheds with those hams that you want to work. If band conditions are poor just e-mail the hams you could not work and set up a new schedule.

Cyberscheds are a simple way to have the internet work to the benefit of hams all over the world.

All posting will stay on-line for 6 months, or until the posting is asked to be deleted. Below is an example of one cyberpost visit the cyberpost page and view them all. Below is an example of one of the postings:

Station: BV/N0IAT

Name: Joe Fitter
QTH: Taipei, TAIWAN Republic of China
Bands: 40/20/17/15/10
Mode: CW (occasional SSB, but not much)
Comments: Looking for South America, Central America, and Carribean QSO's. I QRV from a
neighbors shack (local law), so operating times are limited to station availability. QSL via my CBA --
I DO NOT accept IRC's or Greenbacks, just please send me your QSL card and a route for returning
the favor.

>
> 73 Fred KB4QZH
> kb4qzh@pipeline.com

Hi Fred,
I have a TrakBox, but do not yet use MicClick, because I've just
finished
work on that box. (and still have some problems with it-> no 1296.300Mhz
or so switching via CAT on my FT736R ! hi).
But _you_ need the discriminator voltage of your radio or modem
to let it happen(CN12 pin 4)(0 Volt to 5 Volt and 2.5 in centered
position) ,and at least for the FT736R are pull-up resistors for the UP
and DOWN-lines required.
If this doesn't help, you know at least, that others are also deep in
Murphy's law results.

Roberto,

I have been using AirComm cables to my antenna pointing system on top of a 40 foot tower for the past 2 years.... I have 4 runs , 2 meter, 70 cm, L Band and S Band... Here in Maryland it is quite hot and humid during part of the year and very cold during other parts.... this year has been the one with the most rain in recorded history for Maryland and also the most snowfall... Although I operate on the digital satellites 24 hours a day (full auto)... I have not had a single problem with the cable and VSWR remains low. I used the Type N connectors that I bought from SSB when I got the cable. They go on very easily. I did put coax seal at all external connections, but I would suggest this regardless of the type of cable used...

Hope this helps,
73

Sad to say, it's been abducted by the aliens in the giant spaceship
accompanying comet Hale-Bopp.

(Just kidding. It's still going around the world, somewhat
pointlessly, with two Russians and an American aboard. Check
ftp://kilroy.jpl.nasa.gov/pub/space/elements/molczan/new_molc.Z
for recent orbital elements if you want to look for yourself.)

BTW, it's Mir, a noun, not MIR, an acronym.

2650. NoNo?:TrakBox, Ft736R and 23cm(P3D)

Newsgroup: rec.radio.amateur.space
Date: 1996-12-08 00:00:00 UTC
From: Guenter.Stautz@t-online.de
Message-ID: <58f4nv$udl@news00.btx.dtag.de>
Source record: 20579

Hi All
after long nights with my TrakBox version 3.3h , I came to the
conclusion, that TrakBox designers had never in mind to let it
work on 23 cm with the Ft736R. ___Am I right ????___
The case: I'm a newcomer in the satellite operators community and
I'm trying to prepare my rig for Phase 3D in spring 1997.
So I tried to program satellites with 23cm RX or TX channels. But this
failed. My FT736R did not switch to 1296. Mhz, neither on RX nor TX.
The Ft736R is ok, because CAT programming directly via PC works.
I analysed the CAT commands from TrakBox to FT736R and found the
following hex command sequences for a 70cm/23cm satellite example:
0,0,0,0,0,
C9,60,0,0,1E, This is a dummy switching to 1296Mhz done in the
0,0,0,0,80, Oct. 18 '92 update for TrakBox version 2.05
0,0,0,0,0,
43,21,0,0,2E, This is the Sat. TX Frequency __is ok__.
0,0,0,0,80,
0,0,0,0,0,
8,0,0,0,27, This is TX Mode
8,0,0,0,17, This is RX Mode
0,0,0,0,80,
0,0,0,0,0,
12,96,34,49,1E, And here is the problem: My assumed RX frequency
0,0,0,0,80, 1296.34491 Mhz is not properly set. It should be:
C9,63,44,91 and not 12,96,....., and the dummy
above should be set to 144Mhz
Any help??
Thanks and sorry for this long message.
73, Guenter, DK7KV

2652. AMSAT-OSCAR 13 Burned Up On Re-Entry

Newsgroup: rec.radio.amateur.space
Date: 1996-12-08 00:00:00 UTC
From: fsperber@aol.com
Message-ID: <19961208064600.BAA04778@ladder01.news.aol.com>
Source record: 20719

AMSAT-Deutschland e.V. (Germany)
Press-Release

Telecommunications Satellite AMSAT-OSCAR 13 Burned Up On Re-Entry

On December 5th, 1996, the international telecommunications satellite AMSAT OSCAR-13 burned up upon re-entering the Earth's atmosphere. AMSAT OSCAR-13 was successfully launched on June 15th, 1988, into a highly elliptical orbit on board the first test flight of the new European ARIANE 4 rocket. Over the years, AMSAT OSCAR-13 has enabled direct radio contacts among the world-wide community of nearly 2 million radio amateurs.

AMSAT OSCAR-13 had been constructed within four years by an international project group under the leadership of Dr. Karl Meinzer of AMSAT-Germany. AMSAT (Amateur Radio Satellite Corporation) is a world-wide alliance of approximately 6000 scientists, engineers, technicians and radio amateurs who voluntarily build and operate scientific and communications satellites.
During its operational period, AMSAT OSCAR-13 was monitored and controlled by a group of ground stations in Germany, the United Kingdom, Australia, New Zealand and the United States of America.

Upon its re-entry, AMSAT OSCAR-13 has had a lifespan of over eight years. Originally the mission had been conceived to last only seven years. Overheating of the satellite due to air friction in the upper atmosphere resulted in the destruction of the solar panels on November 24th and the consequent interruption of all radio links. Prior to this event, the on-board monitoring system had transmitted much data relating to the satellite's behavior in the upper atmosphere to ground stations for evaluation.

The decay of the orbit was caused by the gravitational attraction of the Sun and the Moon. The elliptical orbit was stretched so that the satellite gradually approached the Earth which lies at one of the two focal points of
the ellipse. This phenomenon motivated AMSAT to develop new analytical and computational methods to allow long term predictions for future satellites on similar, highly elliptical orbits.

The orbit of the next satellite, AMSAT Phase 3-D, has been calculated using
these new methods and will therefore be more stable over the long term. AMSAT Phase 3-D is scheduled to be launched into space during the first half of 1997 as apparently the only satellite payload for the second test flight of the new ARIANE 5 launcher.

2653. Satellites for $2000?

Newsgroup: rec.radio.amateur.space
Date: 1996-12-08 00:00:00 UTC
From: cathrynm@aol.com
Message-ID: <19961208095400.EAA07586@ladder01.news.aol.com>
Source record: 20720

For this year, I've allocated about $2000 to spend on ham radio stuff. I think I'd like to get involved with ham satellites in some way, and am wondering if there's any way to get in for the first $2000, and have stuff that'll still be useful for me later if I decide to go for a more complete station later. I can spend more later if I really get into this, but I want to limit the damage for now.

Currently, I have a pretty average ham setup. An old IC730 HF transceiver that still works a PK232 and an old 2 Meter FM radio that I use for packet. I have no tower, but do have a house with a small yard, and can get a tower up if I need to. I own many PC's of various speed, so I don't need to spend any money for more computer stuff -- aside from ham radio stuff.

I'm interested both in packet and voice, I think, and would prefer some kind of setup where I could work both. So, what do you guys think? What's the best way to do this that gives me the most operating time on hamsats per dollar?

reply here or to cathrynm@aol.com

So I gather that censorship of individuals and groups is 'ok' if it suits YOUR
agenda, "Intrepid"? Is that right? You wish to censor these individuals from
the Internet and control their rights to access what is essentially a public
forum????

How very ironic, since one of the cornerstones of the Third Reich & Nazi
Germany was censorship and control of individuals and information.

Where does it end?

Hi,

This is an open letter to my friends and family concerning information necessary for you to know for our immediate future. Feel free to copy it and pass it on if you choose.

It's hard to know where to start, and some of you may choose not to believe the info that follows. It is how-ever going to dominate our existence in the near future, and you will have to come to terms with it one way or another. I believe it's almost impossible you will get the truth about these matters from the powers that be, and in our rip and read corporate media, true investigative journalism is a myth.

Just for the record, in 1970, I observed a UFO on the north coast of Tasmania. It was directly outside the house I was in, and was there for 4-5 minutes. It was about 25 feet from where I was. They do exist, they are not tourists! They have been observed throughout all history.

I have done an immense amount of research into the following info. As far as I am concerned, it's the truth.
The truth will be your best ally.

Everything that has happened this century, (as opposed to the previous 2 and more thousand years) the technology, the wars, the political expansionism of Western control, has been a lead up to what's about to happen shortly.

Hale-Bopp

Currently there is a comet named "Hale-Bopp" out near Jupiter, headed our way. (Not on a collision course) It makes it's closest approach by earth in April of 97. It has a number of characteristics that distinguish it from normal comets. It changes course, emits huge jets of material (250,000 kilometres long!) in symmetrical patterns, that are turned on and off. It emits it's own light source. It was first noticed in 1993.
The earliest an unknown comet has ever been discovered until Hal-Bopp was 7 months before it's closest approach. Hale-Bopp was observed 44 months before. This is actually supposed to be impossible under current comet theory, due to the fact that comets only emit light when they get close and react with our sun.
There is another object that appears from behind Hale-Bopp at certain times. This object is 4 times the size of earth, and emits radio signals

that show intelligent origin. This object has been Photographed a number of times by astronomers. NASA's huge space telescope named "Hubble", stopped releasing photos of Hale-Bopp in October of 1995, over a year ago. All major telescopes have not released detailed photos since May this year. The NASA internet site has only about 5 fuzzy amateur photos since May, yet there is another smaller comet named "Hyatake" which has hundreds of photos available. NASA has acknowledged the strange behaviour of the Comet in it's comet news releases. There have been thousands of people claiming to have contact with UFOs this year. A common theme from these people is that there will be a landing of many craft in the near future, maybe even before Christmas, to make the knowledge of UFO craft and their occupants common knowledge. For many decades, UFOs have been debunked in the mass media. This campaign of debunking has been successfully orchestrated by the most powerful intelligence agencies. Remember, we only took to the skies and invented radar a relatively short time ago.

There are a number of important issues to consider with contact of others in the universe.

We as a race have contemplated if we are the only ones in the galaxy. From the research I've done, the joke seems to be that every star system has life. NASA recently announced a 3 billion year old fossil confirming life on mars. This was followed a week later by a similar announcement in Britain from geologists. What a co-incidence. What they didn't tell you was that they knew this decades ago. Indeed, I myself read all about it at the beginning of the year, and was amazed to see it on the front page news, eight months later. I thought it was old news. You see, it doesn't become our accepted reality until an official agency calls a press conference and tells the press to print it. Then the masses accept it as fact. They recently announced "possible life on Jupiter's moon - Europa". What they have not told you, that they have known for decades is that there is still life on mars, Europa and Venus. In the last 18 months they have started discovering planets orbiting other stars, over a dozen in 18 months, from nil until that time. Astronomers are now saying that most stars, maybe even all stars have planets. It is becoming apparent, universe is teaming with life. Many NASA officials, including astronaughts, have broken their silence about life not of this planet.

So, this begs the question: Are they good guys or bad guys?

I think, like on earth, there are both. Many of the well documented alien contact cases (that won't become fact until NASA or some official agency calls a press conference. Don't hold your breath, it ain't gonna happen!) have described some entities that seem to have a spiritual origin. Off planet beings are aware of each other, and are completely aware of what the soul/spirit is. So not only is the universe filled with life, but it encompasses different forms of life, not just physical/biological. Spiritual beings as well. We have on earth been cut off from the rest of the universe for a long long time. We are about to be reconnected.

So, this begs the question: Who's going to show up first, the good guys or the bad guys?

I think it's anyone's guess. There seems to be some power play taking place between those that want to keep us under control, and those that would tell us the truth about the Universe. I think we'll have to judge the visitors by the lies they tell when they get here.
This is why it is so important to know the truth, and ponder this topic.

In the last couple of years, Hollywood, Television and other media (including the music industry) have pushed the Alien theme hard. Hollywood has had just this year, Independence day, The Arrival, Star Trek First Contact, Mars Attacks (a new one with Jack Nicholson) and a number of others. T.V has X Files, 3rd rock from the sun, Star Trek, Sightings and more. Disneyland has opened an E.T. theme park, claiming openly that contact is imminent. This is actually part of a campaign. Have you noticed how much E.T related stuff has come onto the market? Even magazines are carrying abduction stories without making fun of them.

McDonald Douglas aircraft Corporation are producing anti gravity craft (flying saucers) that can get to the moon in no time flat, they have for many years. They have already had help from off planet intelligence. This is documented by a number of employees, that these guys are helping with technology. Very strange things happen when you mess with powerful fields of gravity. It affects time itself, as well as making things disappear. The power plants that power these craft develop immense levels of energy with no pollution. The craft can exceed the speed of light.

There have been sightings of UFOs around a number of recent airline crashes, including the TWA 800 crash out of New York. It is not out of the question that these particular UFOs are of human origin, and are part of a fear based manipulation for future events. (along with the movie Independence day)

I have lost count of the number of free energy devices that have been invented this century, and subverted by whatever means necessary. Just one avenue of free energy is the fact that there have been a number of cars designed that actually run on water. I have checked this out, it is absolutely true. An device called an electrolysis chamber can split water into hydrogen and oxygen and feed the engine hydrogen fuel instead of petrol, with absolutely no pollution! And a number of people have designed electrolysis units that are efficient enough to run our vehicles. People have been killed to subvert this knowledge. We have become within one human life-time, totally dependent on oil. As such, we have fought wars for it (notably the recent Gulf war, killing hundreds of thousands) , built up huge military industrial complexes to protect our "natural resources", and it in turn, has polluted our earth to the brink of extinction. We are brainwashed through the rip and read mass media into thinking this pollution is because we as a race are too stupid to handle technology. We carry the burden of guilt for attempting to kill ourselves off..

BUT, you and I and the rest of the planet would vote in a second for clean in-exhaustible energy. Are we given the opportunity? The truth is, we have no choice but to use the disgusting technology we have ended up with, The pollution problem is not your fault!! It is the fault of a system that has forced this on you, it is totally out of your control, and against anything

you would vote for.

So who controls it?

There are a number of key players involved in this. Notable ones are the name of Rothschild and Rockefella. Both family Dynasties have been going for nearly three hundred years.

Under their control is:

The world bank,
International Monetary Fund
American Federal reserve
American Council of Foreign relations
Tri-lateral commission
United Nations
All of the American banking System
All of the the former Soviet Union banking System
Most of the banking system of the rest of the world, excluding China.
The military Industrial complex, both American and former Soviet Union
Media conglomerates (including Reuters and AAP)
Hollywood
The major intelligence agencies. CIA/Mossad.
The Oil Industry

The list goes on and on, even Sony and Mitsubishi is owned by Rockefella. Don't believe the myth that Bill Gates is the richest man around. Rothschild is actually a Trillionaire!

These guys are sick of democracy, and have engineered through the United Nations, a plan for a World government. They already are the unseen Government. Part of their agenda is population control. As far out as that seems, these guys funded both sides of the second world war. They backed hitler and made a fortune from both sides. Now they've decided there are too many of us. A number of researchers have found incontrovertible evidence that Aids and Ebola are actually viruses produced in laboratories of the biological warfare industry, owned by the fore-mentioned, and disseminated on purpose!

The plan for world government is well advanced, and close to being implemented. Suffice to say, the pattern of behaviour of these powerful manipulators is usually to create a problem, then step in with the solution. There's much I can say about the details of this plan, but the bottom line is that there will be a huge economic crash. The biggest. They can engineer it. On top of that we have this new contact with other races of the universe. Out of the chaos that ensues, they will offer a solution that will solve our economic/ecological/alien threat problems; (Problems they created!) WORLD GOVERNMENT! with a new global currency. "We must unite against a possible Alien attack", we will be told. A shell shot bewildered desperate population will see sense in this solution, and will accept this noble attempt to rebuild the system. That will be the last you see of freedom.

Recently three huge trading blocks were ratified.
1. NAFTA (North American free trade agreement)
2. The European Economic Union
3. APEC. (Asia Pacific economic union)

The head of the NAFTA block is Bill Clinton. And as you saw in the news recently, The head of the APEC trading block meeting was Bill Clinton. Spot the mistake? Not a word of criticism from our media. Does the Managing Director of General Motors go and conduct the board meetings for Ford? They are competitors. What is Bill doing in APEC!? Our fearless leaders must have negotiated hard for that one!
The United Nations already has the power to overturn Australian court decisions. It also can sign in new agreements (in effect, laws) totally bypassing the Australian parliament. It already has signed in hundreds.

Bill Clinton actually signed over sovereignty of the U.S. military to the United Nations at the beginning of this year (96). A large militia movement in America is continuing to grow. It is estimated to be around a million strong at this time. They are armed and opposed to the "New World Order", as the push for world government is known. They are networked across the United States and have many experienced military personnel amongst their ranks. These guys are armed, organised, experienced and deadly serious! Internment camps have been built by the government right across the U.S. The court case for the suspects in the Oklahoma bombing tragedy, has turned up so much evidence of intelligence agents being involved, even the victims families are getting into the act to find out the truth behind this. There is a concerted effort to discredit the militia to such a degree that it will be a sinch to round them up and intern them without public outcry, when the time comes. Clinton also just signed in a law enabling road blocks to be set up, and cars to be searched for illegal guns. While in Australia and the U.K. guns are being taken out of the community.

The theory of evolution can explain many changes through-out species. The famous example of proof that is offered for Darwinism is that of butterflies of various colours on a tree trunk. The most obvious uncamouflaged ones are the first targets to fall prey to birds, thus resulting in a colour change in a species, a more camouflaged species. Of course, this applies to humans as well. If Hitler had his way, most of us would have blonde hair and blue eyes. BUT, did you realise that there is absolutely no evidence that a bacteria can turn into an elephant! Nor do the fossil records show any proof that man came from apes. There are glaring gaps in the fossil records. Scientists are still looking for these fossils to fill in the gaps, in order to validate the man from apes theory. Of course, this hasn't stopped the education system teaching it as fact this century. They also teach that Christopher Columbus discovered the world was round. Yet I stood next to a globe in Florence, Italy that was made in 1175. I saw evidence in the Cairo museum of Egyptian Global knowledge, thousands of years old. In fact ,nearly every ancient civilisation shows evidence of global knowledge. Chris Columbus was actually thick as a brick, and thousands of years behind the times. To get western culture to believe the world was flat, while at the same time,

ships of all cultures were sailing all over the place, took a totalitarian education process that hid the truth. This is also what has happened re our knowledge of earth and the rest of the universe.

Consider this:

* An iron cup was recovered in an Oklahoma coal mine
* Metal tube recovered from a 65 million year old chalk pit
* A gold chain encased in a lump of Illinois coal
* A grooved metal sphere taken from a pre - Cambrian mineral deposit
* A nail embedded in sandstone in Scotland.

Items of this nature have been discovered and documented. They totally disprove the theory that we came from apes, and that we are the first advanced culture on this planet. Scientists are so tuned into the education paradigm, they think that these anomalies will somehow, one day, as if by magic, fit into the history and evolution theory we have been taught, and continue to teach our young. You cannot put a square peg into a round hole. Our true history has been erased.

There are many secret societies, throughout different continents, that have been traced back thousands of years.. They have brought about changes in governments and in the education system over that time. Freemasonry is a prominent name that comes to mind. This is not to say that all freemasons are part of some world control conspiracy. The freemasonry is full of good people doing good things, who wouldn't hear of such a wild idea. The trouble with secret societies, be it the CIA,Mafia, or freemasonry is; you follow orders and are not told the game plan. Compartmentalisation is what keeps the secrets. You just take a vow of allegiance and do your bit, probably in the belief that where-ever the orders originate, there's some wise sage looking after your interests. Incidentally, the mafia and Italian intelligence agency have a secret society called P2. This organisation was involved in the murder of the good Pope John Paul a few decades back. There is a heirachy to these societies that is trans-continental. Control eminates from a central few. We could call them the Illuminati for want of a better name, but these guys are so devious that like "Prince" the pop star, they have no name. Who are they? Rothschild, and Rockefella! Understand the implications of that; the CIA and Mafia answer to the same command! All those CIA drug scandals of recent years, including Iran Contra scandal. Who runs the drug markets of the world? The CIA/Mafia implications in the JFK assassination - it was both! Now you know who's toes JFK stepped on!
And what about the space shuttle? It exists solely to keep you stupid!

So, In summing up;

* Stock up on non perishable food.
* If any Alien race shows up with Bill Clinton and tries to tell you they just stumbled over us recently, and are here to give us free non-polluting energy to solve our problems, they are lying. (they could have given them to us anytime throughout history)

* You live beyond this lifetime, and these guys can only manipulate you if you are in doubt about this. It's also why an alien race never has and never will wipe us out. It's why they keep you in the dark and tell you nothing. You are controlled through a fear based society, that has always been influenced from beyond our earth. At the moment you are almost too scared to walk down the street, due to the mass media barage of negativity, which in turn causes a decline. This is no accident. It is the influence of intelligences more advanced than us. As much as we'd like to think we were the first ones in the universe to invent TV, if we believe that, it is a supreme act of human stupidity.

Everything that has happened this century, (as opposed to the previous 2 and more thousand years) particularly the technology, has been a lead up to what's about to happen shortly. The negative influences on us know that their control is coming to an end, this is they're last ditch effort before the end of game siren sounds. Due to the biological/spiritual nature of life throughout the universe, any open contact with other races eventually must lead to learning the truth about who you are, where you came from, and where you are going, a nuts and bolts knowledge and conscious connection of your powerful soul - a spiritual awakening.
It is about to happen within our lifetime!
We are going home.
The truth shall set us free.

2661. Re: How Do I Start Out Cheap?

Newsgroup: rec.radio.amateur.space
Date: 1996-12-09 00:00:00 UTC
From: cathryn@junglevision.junglevision.com
Message-ID: <slrn5amsi8.3am.cathryn@junglevision.junglevision.com>

I'm kind of on the same quest. At least to figure out where to spend the
first $2K. Which I don't think is really cheap by most people's standards,
but which is a little bit less than what it takes to walk into HRO and
just do the whole thing brand new. My impression is that the guys who
are pretty serious about this seem to have the 726 or 736 and the KLM/M2
antenna set. Personally, I put a lot of confidence in conventional
wisdom. So, to go this way, the game seems to become, how to scrounge up
this kind of system. (Of course with preaamps, amplifiers and all that.)

Personally, my thinking now on how to do this in gradual, stages
is to do the antenna side first. New. At least deal with
the tracking, feedline and preamp issues. While finding a used 2M SSB radio.
Maybe working RS-10 , Mir or something, and then trying to hear sats on
440 Mhz with converters. (Not sure if 440->28mHZ or 440->144Mhz is better?)

By then, I figure a few months will have passed, I'll be able to hear
what's going on, and either I'll be anxious to be rid of the whole thing
or I'll be lusting after a, probably used, 726/736. By then, I figure we'll
know whether P3d is going to be really cool, etc. Fingers crossed.

2662. NORAD Two-Line Orbital Element Sets (TLE912)

Newsgroup: rec.radio.amateur.space
Date: 1996-12-10 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <58i9dv$l3a@blackbird.afit.af.mil>
Source record: 20588

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

You would need a c band satellite dish and receiver. I would think a 7 foot would be about the minimum to get great video. you might be able to get by with a 6 foot if you live near the center of the U.S.

The satellite is over to the east - 69 degrees west or so.

The good news is that you can scrounge together a system pretty cheaply. Lots of people have old ones they aren't using anymore. You'd need a few bags of cement and a pole, some cable to run into the house. If you only want it for the one channel, this would be really easy and cheap to do.

I think it's going to move to a stronger satellite in the central arc sometime fairly soon. The good news is the signal would be stronger. The bad news is that the new satellite would have others sats nearby, meaning the smaller your dish the greater the crosstalk. If you live on the west coast, it may be kind of low on the horizon in it's present location. Let me know where you live and I'll see if I can give you the particulars. Email me....

2666. RS-10 /RS-15 what are you using?

Newsgroup: rec.radio.amateur.space

Greetings all,
this post is a call for information. I am trying to setup a satellite station for my grandfather, (a 78 YO ham..kb2wfn) and I figured that you all could help me.
What equipment are you all using for up / downlink radios..
, antennas? The operating budget is around $600.00 but if your system cost more than that feel free to tell me about it. I just wanted to get an idea of what everyone was using.

73's Jason N1RWY

UP: Kenwood TR9130 8 watts 5/8 colinear // 3ele beam both @ 15 feet.
DN: Realistic HTX-100 dipole @ 17 feet

I've used a IC251A with 10 watts into a Jpole, and a beat-up Undien 2510
fed with a 100 foot long dipole. No problem working ssb or CW on RS-10,
CW only on RS15.

When I added a Hamtronics downconverter for 70cm, I could work FO-20
quite often as well.

DL1CR de G3RUH 1992 May 11

Kurt, when I wrote my routines for FT736R CAT (published on this BBS) I discovered that Yaesu did a great job and introduced only 2 bugs.

One was that if the radio is in (say) 2m RX /70cm TX, then the CAT cannot change it to 70cm RX /2m TX! This is because you have to make the changes in two stages, e.g. 2/70 -> 2/2 -> 70/2.

Obviously the middle step is inadmissable. If your radio has a third module (e.g.
23cm), then you can go 2/70 -> 23/70 -> 23/2 -> 70/2.

The other bug concerns reading the s-meter and squelch. This sometimes misses the last byte.

So your problem is not a fault of the tracker-box code.

What's the chance of getting DirecTV or USSB to carry NASA Select if we all wrote or called? Anyone have any inside info on these DSS providers?

Hi,
I am interested in getting a new radio for P3D. The 736 seems to be the historical favorite but there are new radios from Kenwood and Icom. Has anyone compared the features or performance? Do the Kenwood or Icom radios have the same special satellite oriented features that the Yaesu 736 has? If you were going to buy one which one would you choose and why?

I am planning to operate on 1.2 GHz in addition to 2 and 440.

I would also be interested to know what you would recommend for 2.3 GHz.

Thanks very much for you advice in advance.

From: kwalker@qb.island.net
Message-ID: <58lbap$f6r@cliff.island.net>
Source record: 20599

I have not followed the development of the packet capable amateur satellites but I believe there are some in operation. As a sometimes off shore sailor and a radio amateur, I am asked by fellow sailors whether they should get a ham licence and how effective it would be. I tell them about 20m ssb, about hf packet and amtor but I also go on about how low earth store and forward packet satellites will be available one day. But maybe they are now?

The ideal packet system for offshore use would allow the offshore sailing ham to prepare a packet message and the software would determine when a bird is overhead and send up the message and pick up any waiting mail. Are these birds ready to do this? Is there software that would do it? Am I right that these can be worked with small omni antennas?

I think they require dual band operation? Which bands? Hopefully they are bands that can be worked with readily available dual band mobile rigs?

I have thought about this from time to time but I am not up to date on what is available. Anyone want to try to update me??

Thanks.

Hi just a quick note-- the Two meter antenna was broken on the first EVA and they did a second EVA today and did a makeshift repair which will work, but the signal will not be as strong or as steady as before.. but it will work for the time being, they will fix the coax and on the next planned EVA make the proper repair.. I have no idea when that will be.. 73 DAVE N1PPP

From: kwalker@qb.island.net (Ken Walker)
Subject: PacSat for Offshore Sailing

I have not followed the development of the packet capable amateur satellites
but I believe there are some in operation. As a sometimes off shore sailor
and a radio amateur, I am asked by fellow sailors whether they should get a
ham licence and how effective it would be. I tell them about 20m ssb, about
hf packet and amtor but I also go on about how low earth store and forward
packet satellites will be available one day. But maybe they are now?

The ideal packet system for offshore use would allow the offshore sailing ham
to prepare a packet message and the software would determine when a bird is
overhead and send up the message and pick up any waiting mail. Are these
birds ready to do this? Is there software that would do it? Am I right that
these can be worked with small omni antennas?

I think they require dual band operation? Which bands? Hopefully they are
bands that can be worked with readily available dual band mobile rigs?

I have thought about this from time to time but I am not up to date on what is
available. Anyone want to try to update me??

Thanks.

Subject: RS-10 /RS-15 what are you using?

Greetings all,
this post is a call for information. I am trying to setup a satellite
station
for my grandfather, (a 78 YO ham..kb2wfn) and I figured that you all could
help me.
What equipment are you all using for up / downlink radios..
, antennas? The operating budget is around $600.00 but if your system cost
more than that feel free to tell me about it. I just wanted to get an idea
of
what everyone was using.

73's Jason N1RWY

UP: Kenwood TR9130 8 watts 5/8 colinear // 3ele beam both @ 15 feet.
DN: Realistic HTX-100 dipole @ 17 feet

I've used a IC251A with 10 watts into a Jpole, and a beat-up Undien 2510
fed with a 100 foot long dipole. No problem working ssb or CW on RS-10,
CW only on RS15.

When I added a Hamtronics downconverter for 70cm, I could work FO-20
quite often as well.

From: (null)

Kurt, when I wrote my routines for FT736R CAT (published on this
BBS) I discovered that Yaesu did a great job and introduced only 2
bugs.

One was that if the radio is in (say ) 2m RX /70cm TX, then the CAT cannot
change it to 70cm RX /2m TX! This is because you have to make the
changes in two stages, e.g. 2/70 -> 2/2 -> 70/2.

Obviously the middle step is inadmissable. If your radio has a third
module (e.g.
23cm), then you can go 2/70 -> 23/70 -> 23/2 -> 70/2.
```

The other bug concerns reading the s-meter and squelch. This
sometimes misses the last byte.

So your problem is not a fault of the tracker-box code.

Perhaps with the formation of a "counter" group, e.g. alt.human.power,
dedicated to promoting human rights, understanding, and cultural
pluralism, and to fighting racism, sexism, ethnic and religious hatreds,
etc.

Fight fire with fire, not censorship.
(and please take this discussion to a more appropriate group -- see
the Followup-to header for a best guess on my part as to what they might be)

To The Group:

I'm in the process of setting up a satelite system. A few local guys are having fun with RS-10. What I would like to do is to set up a nice beginners station. I currently have a IC-275A with a GP-3 for the Up link and two different HF xcvr's to set up the down link. My question is would an HF vertical like the Ringo ranger AR-10 work or maybe an inverted V dipole. I am reading the ARRL satelite handbook but I'd like to hear from some people actually working the birds. Also should I get a pre-amp and if so does anyone have any recommendations ie buy,build?? Thanks for your help.

I am using up to 100w SSB with a J-pole ant for the uplink, & this is plenty for RS-10, but not good enough for RS-15 (steerable beam in progress).

I use a horizontal loop at about 25ft for 10m receive, & this works well for on RS-10, only ok for RS-15 on near-overhead passes. I find vertical antennas too noisy.

RS-10 has a very strong downlink for an amatuer satellite. I put up a Ringo, but can honestly say that it didn't offer any better performance than a simple dipole.

Try orienting the dipole for best north/south reception. Don't worry about a pre-amp. I used a Radio Shack 10m rig to listen to my downlinks.

Methinks a "C" band dish setup is required. I don't think the digital
guys like Dish, USSB, Primestar, etc. are carrying NASA TV. For the
"bird" and transponder, check a copy of Satellite Times.

I believe the local cable company (TCI) here in the Clear Lake area of
Houston (near Johnson Space Center) carries NASA TV (NASA Select is a
non-term....). It's been years since I was a subscriber, but back then,
they were just carrying it during missions. I have heard they are carrying
it 24 hours a day, now. But, I don't know that firsthand. I believe a lot
of people asked the cable company for it and TCI (then Storer Cable)
accomodated.

I suppose the same could happen with the DSS groups. Also, with local
cable companies, if enough of their subscribers request it. Having a few
school administrations backing the request might help, too.

Press for mission and non-mission airing of NASA TV. Might as well go all
the way. Maybe it can be compromised down to mission coverage.

Good luck,

2690. Re: Best Ant for RS-10 Down Link

Newsgroup: rec.radio.amateur.space
Date: 1996-12-12 00:00:00 UTC
From: Erik Skovgaard <Erik_Skovgaard@bc.sympatico.ca>
Message-ID: <01bbe7e6$dc693f80$09d866cf@default>
Source record: 20616

Brad,

I use a sloping dipole on 10 m to receive RS-10. It always has a very
strong signal here. I added a Hamtronics pre-amp recently and it does
boost the signal a few S units and also provides a bit of selectivity to
reject out-of-band signals.

For uplink I have used a 1/4 wave vertical and about 80 Watts. I only
tried CW since the amp was not linear, but I got very good reports.

RS-10 could use some activity, so go ahead. Hope to wrk u there.

Oh! My? $$$$
THIS IS THE FAIREST MOST HONEST WAY I KNOW TO SHARE THE WEALTH! Hello!
(Save this file now...it will save you some time typing later if you
decide to try this)
Would you like to make thousands of dollars, quick, legally, with NO
CATCH? Then keep reading....please take five minutes to read this
article it will change your life, just like it did mine. It's true!
You can make up to or over $50,000 dollars in 4-6 weeks, maybe sooner!
I SWEAR I'M NOT LYING TO YOU, AND THIS IS NOT A SCAM! If you're
intrested, keep reading; if you're not, I apologize for wasting your
time.
Here we go. A little while back, I was browsing through these
newsgroups, just like you are now, and came across an article similar to
this that said you could make thousands of dollars in weeks with only
an initial investment of $5! So, I thought, "Yeah, right, must be a
scam", but I was curious, like most of us , so I kept reading. Anyway,
it
said that you send $1 to each of the 5 names and addresses stated in the
article. You then place your own name and address in the article at
the bottom of the list at #5, and post the article in at least 200
newsgroups (there are thousands). No catch, that was it!
So after thinking it over, talking to a few people first, I tried it.
I figured what have I got to lose except for 5 stamps and $5, right?
Well, guess what...within 7 days, I started getting money in the mail!
I was shocked! I still figured it would end soon, and didn't give it
another thought. But then money kept coming IN, tripling in size and
multiplying by 10-20 times the amount that I got the first week! In my
first week I made about 20 to 30 dollars. But by the end of the second
week, I had made a total of over $1,000!!!! In the third week, I had
over $10,000 dollars, and it's still growing. This is my fourth week
(Oct 11) and I've made about $42,000 TOTAL, and the money is still
coming in.....
Let me tell you how this works and most importantly, WHY it
works...also, make sure you print a copy of the article NOW, so you get
the information off of it, and begin making money.

The process is very simple, and it consists of 3 EASY steps:

STEP 1: Get 5 seperate pieces of paper and write the following on each
sheet of paper..."PLEASE PUT ME ON YOUR MAILING LIST. YOU ARE NUMBER
5." (etc. to number 1) Get five $1 bills and place ONE inside each piece
of paper that
you just wrote on, and fold each piece of paper so the bill will not be
seen in the envelope (otherwise, nosey people who like to steal envelopes
with money in it will get yours). Put one paper inside the envelope

and seal it. Do the same for all 5. You should now have 5 envelopes sealed, EACH have a piece of paper AND a $1 bill stuffed inside of the paper. Make sure those words that were stated above are stated on each paper. What you are doing is creating a service by this, this is PERFECTLY LEGAL. Now then, mail the 5 envelopes with the paper and $1 in each to the following 5 addresses:

1. P.DEBOUZY, 9 rue des Lavandieres, 78530 BUC, FRANCE.
2. J. MAHON, 750 Highland Dr. Apt. #210, Ojai, Calif. 930234.
3. P. Rae, 209 Oak Butte CT., Folsom. California. 95630. USA5.
4. M. Rapp, 801 Mockingbird Ct., Hinesville, GA 31313 USA
5. J. Rhodes, 5011 Stoneview Dr., Charlestown, IN 47111

STEP 2: Now take the #1 name off the list that you see above, move the other 4 names up (5 becoming 4, 4 becoming 3, ect.) and put YOUR NAME as number 5 on the list. You can slightly alter this article if you need to, editing what you need to edit.

STEP 3: Post your amended article (with your name at #5) to at least 200 news groups (I think there are close to 18,000 of them). All you need is say, at least 200. HOW TO DO THIS: If you have Netscape 3.0 do EXACTLY the following:

1) Click on any news group like normal, THEN click on 'TO NEWS', which is on the far left when you're in the newsgroups page. This will bring up a box to type a message in.

2) Leave the newsgroup box like it is, CHANGE the subject box to something flashy, like, "NEED CASH $$$ READ HERE $$$" or "FAST CASH"!!!

3) Tab once and you should be ready to type. Now, retype (only once) THIS whole article WORD FOR WORD, except to insert your name at #5, and to remove #1 off the list, plus any other small changes you think you need to make. Keep almost all of it the SAME!

4) When you're done typing the WHOLE article, click on FILE in THIS BOX, RIGHT ABOUVE SEND, NOT WHERE IT SAYS NETSCAPE NEWS ON THE FIRST BOX. Click on SAVE AS when you're under FILE. Save you artcle as a text file to your C: or A: drive. DO NOT SEND OR POST YOUR ARTICLE UNTIL YOU DO THIS. Once saved, move on to number 5 below.

5) If you still have all of your text, send or post to this newsgroup now by just clicking send, which is right below FILE, and right above Cc: .

6)Here's where you're going to post all 200. OK, click on any news group then click on 'TO NEWS', again in the top left corner. Leave the NEWSGROUPS BOX alone again, put a flashy subject title in the SUBJECT BOX, hit TAB once you're in the body of the message, and then click on ATTACHMENTS, which is below the SUBJECT BOX. You will get another box to come up. Click on ATTACH FILE, then find YOUR file that you saved; click once on the file, and then click OPEN' now click on OK; if you did this right, you should see your file name in the attachments box, and

it will be shaded green.

IF YOU USE IE EXPLORER IT'S JUST AS EASY...HOLDING DOWN THE LEFT MOUSE BUTTON, HIGHLIGHT THIS ARTICLE. THEN PRESS THE "CRTL" KEY AND THE "C" KEY AT THE SAME TIME TO COPY THIS ARTICLE. THEN PRINT THIS ARTICLE FOR YOUR RECORDS TO HAVE THE NAMES OF THOSE YOU WILL BE SENDING $1 BILLS TO. NEXT GO TO THE NEWS GROUPS AND PRESS "POST AN ARTICLE" A WINDOW WILL OPEN. TYPE IN YOUR HEADLINE IN THE SUBJECT AREA AND THEN CLICK IN THE LARGE WINDOW BELOW. PRESS "CRTL" AND THEN "V" AND THE ARTICLE WILL BE PLACED IN THE WINDOW. IF YOU WANT TO EDIT THE ARTICLE, DO SO AND THEN HIGHLIGHT AND COPY IT AGAIN. NOW EVERYTIME YOU POST THE ARTICLE

IN
A NEW NEWSGROUP ALL YOU HAVE TO REPEAT "CTRL" AND "V" AND PRESS POST.

7)That's it. Each time you do this, all you have to do is type in a different newsgroup, so that way, it posts to 200 DIFFERENT newsgroups, you see? Now you just have 199 to go!! (Don't worry, each one takes about 30 seconds, once you get used to it) REMEMBER 200 IS THE MINIMUM. The more you post the more money you will make.

AND THAT'S IT!!! THAT'S THE ONLY 3 STEPS THERE IS!!!

You are now in the mail order business and will start recieving your $1 envelopes from various people all over the world within days. HINT THE MORE NEWSGROUPS YOU POST TO, THE MORE MONEY YOU WILL MAKE. You may want to rent a PO Box eventually because of all the mail. If you wish to stay anonymous, you can come up with a name, such as "manager" or "investor". Just make sure all the addresses are CORRECT, please.

LET ME TELL YOU WHY THIS SYSTEM WORK!!!!

Out of every 200 postings, let's say I ONLY recieve 5 replies, which is actually VERY LOW. So I made 5 dollars with my name at #5. Now then, each person who just sent me $1 makes, say only 200 postings, now with your name at number 4, WHICH IS A TOTAL OF 1000 POSTINGS, not including yours too. 50 people send you $1 now; thats $50 you just made! Now, then your new 50 agents post 200 each with YOUR NAME AT NUMBER 3, OR 10,000 POSTING (50x200). Average return is 500 at $1 each is $500. They make 200 postings, which is 5,000 returns at $1 each, which is $5000 dollars! And finally, 5000 people make 200 postings wach with YOUR NAME AT NUMBER 1. YOU NOW GET A RETURN OF $50,000 BEFORE YOUR NAME DROPS OFF THE LIST. AND THAT'S IF EVERYONE MAKES 200 POSTINGS ONLY, AND IF ONLY 5 PERSONS RESPOND!!!!!
When your name is no longer on the list, you just take the latest posting that is appearing in the newsgroups, and SEND OUT ANOTHER $5 TO THE NAMES ON THE LIST, PUTTING YOUR NAME AT 5 AGAIN. And start posting again. The thing to remember is, do you realize that THOUSANDS OF PEOPLE ALL OVER THE WORLD ARE JOINING THE INTERNET AND READING THESE ARTICLES EVERY DAY, JUST LIKE YOU ARE RIGHT NOW!!! So can afford $5 dollars and see if it really works? I think so.....
People have said, "What if the plan is played out and no one

sends you
the money?" So what! What are the chances of that happening when there are TONS OF NEW HONEST USERS AND NEW HONEST PEOPLE who are joining the Internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with THOUSANDS of those joing the actual Internet. Remember, play FAIRLY and HONESTLY and this WILL WORK, I PROMISE YOU!!! You just have to be honest. Make sure you print this article out RIGHT NOW, also, try to keep a list of everyone that sends you money and always keep an eye on the mnewsgroups to make sure everyone is playing fairly. REMEMBER, HONESTY IS THE BEST POLICY. YOU DON'T NEED TO CHEAT THE BASIC IDEA TO MAKE MONEY!! GOOD LUCK TO ALL AND PLEASE PLAY FAIRLY AND YOU WILL REAP THE HUGE REWARDS FROM THIS, WHICH IS TONS OF EXTRA CASH!!!
**By the way, if you try to decieve people by posting the

messages with
your name on the list and not sending the money to the people already

on
the list, you will not get much. Someone I talKed to knew someone who did that and he only made $150 dollars, and that's AFTER seven or eight weeks! Then he sent the 5 $1 bills, people added him to their lists, and in 4-5 weeks, he had over $10K.
THIS IS THE FAIREST AND MOST HONEST WAY I HAVE EVER SEEN TO SHARE THE WEALTH OF THE WORLD WITHOUT COSTING ANYTHING BUT OUR TIME!!!

2692. Re: FT290/790 9600 Bd mods?

Bob,

this is info about 9600 bps mods for FT290/790 from my acrhive.
I used it some time ago and it run well.
I hope it will be usefull for you.

MODEM @WW de:DL6DBN 23.09.90 07:50 0 1568 Bytes
FT290/790RII mods. PSK/9k6
*** Bulletin-ID: 229008DB0SGL ***

de DL6DBN @ DB0SGL

How to modify YAESU FT-290 RII and FT-790RII
for 1200 BpS PSK and 9600 BpS FSK

As you know, for 1200 BpS PSK/FM a direct injektion of the signal into the FM-varicap is recommended and for 9600 BpS FSK necessary. For 9600 BpS you will need the FM-discriminator output.

Due to SM-Technology the following modifications are not easy to manage.
FT-790RII in ()

The FM-discriminator output is at pin 9 of Q4001 (Q402) MC3357P. Use a shielded cable to connect this pin with your 9k6-modem input. The IF-bandwidth of CF01 (CF01) CFW455F seems to be to small for very good results, so I recommend to exchange it with a CFW455D. With good RF-strength and proper tuning the CFW455F can fit as well.

The more complicate modification is the injection point. Inject your TX-signal below the main unit where R30124, C30120 and C30126 (R30117, C30117 and C30124) come together (all SMD). Is it necessary to say, use a shielded cable? As long as no other AF from the tone unit or the microphon reaches this point you must not cut any connections. But adjust your FM-deviation.

I made this changes in both radio sets and had already good contacts via UoSAT-OSCAR 14. So good luck and success.

Turn that underutilized FT-736 Satellite radio into cold hard cash! I am looking to purchase a good used FT726R
with modules(6M and/or 22Mhz and/or 1.2Ghz). Please reply if you are willing to part with yours.

> in each to the following 5 addresses:
>
>
>1. P.DEBOUZY, 9 rue des Lavandieres, 78530 BUC, FRANCE.
>2. J. MAHON, 750 Highland Dr. Apt. #210, Ojai, Calif. 930234.
>3. P. Rae, 209 Oak Butte CT., Folsom. California. 95630. USA5.
>4. M. Rapp, 801 Mockingbird Ct., Hinesville, GA 31313 USA
>5. J. Rhodes, 5011 Stoneview Dr., Charlestown, IN 47111
>
>STEP 2: Now take the #1 name off the list that you see above, move the
>other 4 names up (5 becoming 4, 4 becoming 3, ect.) and put YOUR NAME
>as number 5 on the list. You can slightly alter this article if you need
>to, editing what you need to edit.
>
> STEP 3: Post your amended article (with your name at #5) to at least
> 200 news groups (I think there are close to 18,000 of them). All you
> need is say, at least 200. HOW TO DO THIS: If you have Netscape 3.0
>do EXACTLY the following:
>
> 1) Click on any news group like normal, THEN click on 'TO NEWS', which
> is on the far left when you're in the newsgroups page. This will bring
> up a box to type a message in.
>
> 2) Leave the newsgroup box like it is, CHANGE the subject box to
> something flashy, like, "NEED CASH $$$ READ HERE $$$" or "FAST CASH"!!!
>
> 3) Tab once and you should be ready to type. Now, retype (only once)
> THIS whole article WORD FOR WORD, except to insert your name at #5, and
> to remove #1 off the list, plus any other small changes you think you
> need to make. Keep almost all of it the SAME!
>
> 4) When you're done typing the WHOLE article, click on FILE in THIS
> BOX, RIGHT ABOUVE SEND, NOT WHERE IT SAYS NETSCAPE NEWS ON THE FIRST
> BOX. Click on SAVE AS when you're under FILE. Save you artcle as a
> text file to your C: or A: drive. DO NOT SEND OR POST YOUR ARTICLE
> UNTIL YOU DO THIS. Once saved, move on to number 5 below.
>
> 5) If you still have all of your text, send or post to this newsgroup
> now by just clicking send, which is right below FILE, and right above
> Cc: .

>
> 6)Here's where you're going to post all 200. OK, click on any news
> group then click on 'TO NEWS', again in the top left corner. Leave the
> NEWSGROUPS BOX alone again, put a flashy subject title in the SUBJECT
> BOX, hit TAB once you're in the body of the message, and then click on
> ATTACHMENTS, which is below the SUBJECT BOX. You will get another box
> to come up. Click on ATTACH FILE, then find YOUR file that you saved;
> click once on the file, and then click OPEN' now click on OK; if you did
> this right, you should see your file name in the attachments box, and
>it will be shaded green.
>

1. I have about 100ft of feedline
2. I know the J-pole is not properly tuned yet (it's igloo-time up here)
3. I am surrounded by apartment buildings
4. In my experience, & in my situation, low power & omni-antennas work only when the satellite is on a near-overhead pass, and the satellite is not busy. I have almost given up working weekends, due to being stomped on.
5. If you want to work passes other than overhead, then because of the path loss, there is no choice but to increase power &/or antenna gain.
6. I was trying to give this guy the confidence that with his TX set-up he darn well ought to be able to make contacts.

Rod, VE3INE

I hope that you know your GOD loves you, no matter what GOD you believe in. Thank your GOD for life and ask your GOD to let you live as your GOD would want you to. When we look closely at GOD we begin to realize that we all believe in the same GOD, we may see GOD in different ways, but GOD will always be GOD. There can only be one GOD, and that one GOD loves us all, and wants nothing but the best for us. If your in doubt, just remember GOD works in mysterious ways, there is a reason for everything...

God thank you.

Someone

2698. Re: PacSat for Offshore Sailing

Ken,

I may not be of much help but I have assisted W4AVO (George) put his station together. He is a live aboard and blue water sailor. Last year he was in the Bahamas and will be there again this year. He has been on UO22 and has used his station very succesfully. AF4N Wes and I have both put in a good bit of time getting his boat ready (all three of us are sailors). George just went off internet and will be on the air for the next six months. Wes and I will be on internet and can offer some suggestions.

The first point is that it is not difficult and even underway the system works just fine. However antenna placement is a problem. George uses one J pole for up link and a small yagi for down link (3 elements). He rotates it 180 degrees during the pass and has no difficulity going from the radio to the cockpit to make the change. Since UO22 is basically automated his computer does all the work.

He uses a 386 that is not fast and is just a work horse.

If I can be of help please contact me.

Subject: Best Ant for RS-10 Down Link

To The Group:
```

I'm in the process of setting up a satelite system. A few local guys are having fun with RS-10. What I would like to do is to set up a nice beginners station. I currently have a IC-275A with a GP-3 for the Up link and two different HF xcvr's to set up the down link. My question is would an HF vertical like the Ringo ranger AR-10 work or maybe an inverted V dipole. I am reading the ARRL satelite handbook but I'd like to hear from some people actually working the birds. Also should I get a pre-amp and if so does anyone have any recommendations ie buy,build?? Thanks for your help.

RS-10 has a very strong downlink for an amatuer satellite. I put up a Ringo, but can honestly say that it didn't offer any better performance than a simple dipole.

Try orienting the dipole for best north/south reception. Don't worry about a pre-amp. I used a Radio Shack 10m rig to listen to my downlinks.

Date: Fri, 06 Dec 1996 16:35:02 GMT
From: wa4twa@versoft.com
Subject: Cu-Seeme Video conferencing

Does anyone know of anyone using Video Conferencing on computer/internet in conjunction with amateur redio? I have been in contact with hundreds of people from around the world on Cu-Seeme and have run into only one ham. Is there a freq. HF or VHF where hams may hang out that use both modes..computer and radio. I believe this would be a natural progression from Slow Scan. We now can SEE the people we are in QSO with.

If you are interested in setting up a sched. and have Video COnferencing capabilities or are just interested drop me an e-mail,

Subject: free money

Oh! My? $$$$
THIS IS THE FAIREST MOST HONEST WAY I KNOW TO SHARE THE WEALTH! Hello!
(Save this file now...it will save you some time typing later if you
decide to try this)
Would you like to make thousands of dollars, quick, legally, with NO
CATCH? Then keep reading....please take five minutes to read this
article it will change your life, just like it did mine. It's true!
You can make up to or over $50,000 dollars in 4-6 weeks, maybe sooner!
I SWEAR I'M NOT LYING TO YOU, AND THIS IS NOT A SCAM! If you're
intrested, keep reading; if you're not, I apologize for wasting your
time.
Here we go. A little while back, I was browsing through these
newsgroups, just like you are now, and came across an article similar to
this that said you could make thousands of dollars in weeks with only
an initial investment of $5! So, I thought, "Yeah, right, must be a
scam", but I was curious, like most of us , so I kept reading. Anyway,
it
said that you send $1 to each of the 5 names and addresses stated in the
article. You then place your own name and address in the article at
the bottom of the list at #5, and post the article in at least 200
newsgroups (there are thousands). No catch, that was it!
So after thinking it over, talking to a few people first, I tried it.
I figured what have I got to lose except for 5 stamps and $5, right?
Well, guess what...within 7 days, I started getting money in the mail!
I was shocked! I still figured it would end soon, and didn't give it
another thought. But then money kept coming IN, tripling in size and
multiplying by 10-20 times the amount that I got the first week! In my
first week I made about 20 to 30 dollars. But by the end of the second
week, I had made a total of over $1,000!!!! In the third week, I had
over $10,000 dollars, and it's still growing. This is my fourth week
(Oct 11) and I've made about $42,000 TOTAL, and the money is still
coming in.....
Let me tell you how this works and most importantly, WHY it
works...also, make sure you print a copy of the article NOW, so you get
the information off of it, and begin making money.

The process is very simple, and it consists of 3 EASY steps:

STEP 1: Get 5 seperate pieces of paper and write the following on each
sheet of paper..."PLEASE PUT ME ON YOUR MAILING LIST. YOU ARE NUMBER
5." (etc. to number 1) Get five $1 bills and place ONE inside each piece
of paper that
you just wrote on, and fold each piece of paper so the bill will not be
seen in the envelope (otherwise, nosey people who like to steal envelopes
with money in it will get yours). Put one paper inside the envelope
and seal it. Do the same for all 5. You should now have 5 envelopes

sealed, EACH have a piece of paper AND a $1 bill stuffed inside of the paper. Make sure those words that were stated above are stated on each paper. What you are doing is creating a service by this, this is PERFECTLY LEGAL. Now then, mail the 5 envelopes with the paper and $1 in each to the following 5 addresses:

1. P.DEBOUZY, 9 rue des Lavandieres, 78530 BUC, FRANCE.
2. J. MAHON, 750 Highland Dr. Apt. #210, Ojai, Calif. 930234.
3. P. Rae, 209 Oak Butte CT., Folsom. California. 95630. USA5.
4. M. Rapp, 801 Mockingbird Ct., Hinesville, GA 31313 USA
5. J. Rhodes, 5011 Stoneview Dr., Charlestown, IN 47111

STEP 2: Now take the #1 name off the list that you see above, move the other 4 names up (5 becoming 4, 4 becoming 3, ect.) and put YOUR NAME as number 5 on the list. You can slightly alter this article if you need to, editing what you need to edit.

STEP 3: Post your amended article (with your name at #5) to at least 200 news groups (I think there are close to 18,000 of them). All you need is say, at least 200. HOW TO DO THIS: If you have Netscape 3.0 do EXACTLY the following:

1) Click on any news group like normal, THEN click on 'TO NEWS', which is on the far left when you're in the newsgroups page. This will bring up a box to type a message in.

2) Leave the newsgroup box like it is, CHANGE the subject box to something flashy, like, "NEED CASH $$$ READ HERE $$$" or "FAST CASH"!!!

3) Tab once and you should be ready to type. Now, retype (only once) THIS whole article WORD FOR WORD, except to insert your name at #5, and to remove #1 off the list, plus any other small changes you think you need to make. Keep almost all of it the SAME!

4) When you're done typing the WHOLE article, click on FILE in THIS BOX, RIGHT ABOUVE SEND, NOT WHERE IT SAYS NETSCAPE NEWS ON THE FIRST BOX. Click on SAVE AS when you're under FILE. Save you artcle as a text file to your C: or A: drive. DO NOT SEND OR POST YOUR ARTICLE UNTIL YOU DO THIS. Once saved, move on to number 5 below.

5) If you still have all of your text, send or post to this newsgroup now by just clicking send, which is right below FILE, and right above Cc: .

6)Here's where you're going to post all 200. OK, click on any news group then click on 'TO NEWS', again in the top left corner. Leave the NEWSGROUPS BOX alone again, put a flashy subject title in the SUBJECT BOX, hit TAB once you're in the body of the message, and then click on ATTACHMENTS, which is below the SUBJECT BOX. You will get another box to come up. Click on ATTACH FILE, then find YOUR file that you saved; click once on the file, and then click OPEN' now click on OK; if you did this right, you should see your file name in the attachments box, and it will be shaded green.

IF YOU USE IE EXPLORER IT'S JUST AS EASY...HOLDING DOWN THE LEFT MOUSE BUTTON, HIGHLIGHT THIS ARTICLE. THEN PRESS THE "CRTL" KEY AND THE "C" KEY AT THE SAME TIME TO COPY THIS ARTICLE. THEN PRINT THIS ARTICLE FOR YOUR RECORDS TO HAVE THE NAMES OF THOSE YOU WILL BE SENDING $1 BILLS TO. NEXT GO TO THE NEWS GROUPS AND PRESS "POST AN ARTICLE" A WINDOW WILL OPEN. TYPE IN YOUR HEADLINE IN THE SUBJECT AREA AND THEN CLICK IN THE LARGE WINDOW BELOW. PRESS "CRTL" AND THEN "V" AND THE ARTICLE WILL BE PLACED IN THE WINDOW. IF YOU WANT TO EDIT THE ARTICLE, DO SO AND THEN HIGHLIGHT AND COPY IT AGAIN. NOW EVERYTIME YOU POST THE ARTICLE

IN
A NEW NEWSGROUP ALL YOU HAVE TO REPEAT "CTRL" AND "V" AND PRESS POST.

7)That's it. Each time you do this, all you have to do is type in a different newsgroup, so that way, it posts to 200 DIFFERENT newsgroups, you see? Now you just have 199 to go!! (Don't worry, each one takes about 30 seconds, once you get used to it) REMEMBER 200 IS THE MINIMUM. The more you post the more money you will make.

AND THAT'S IT!!! THAT'S THE ONLY 3 STEPS THERE IS!!!

You are now in the mail order business and will start recieving your $1 envelopes from various people all over the world within days. HINT THE MORE NEWSGROUPS YOU POST TO, THE MORE MONEY YOU WILL MAKE. You may want to rent a PO Box eventually because of all the mail. If you wish to stay anonymous, you can come up with a name, such as "manager" or "investor". Just make sure all the addresses are CORRECT, please.

LET ME TELL YOU WHY THIS SYSTEM WORK!!!!

Out of every 200 postings, let's say I ONLY recieve 5 replies, which is actually VERY LOW. So I made 5 dollars with my name at #5. Now then, each person who just sent me $1 makes, say only 200 postings, now with your name at number 4, WHICH IS A TOTAL OF 1000 POSTINGS, not including yours too. 50 people send you $1 now; thats $50 you just made! Now, then your new 50 agents post 200 each with YOUR NAME AT NUMBER 3, OR 10,000 POSTING (50x200). Average return is 500 at $1 each is $500. They make 200 postings, which is 5,000 returns at $1 each, which is $5000 dollars! And finally, 5000 people make 200 postings wach with YOUR NAME AT NUMBER 1. YOU NOW GET A RETURN OF $50,000 BEFORE YOUR NAME DROPS OFF THE LIST. AND THAT'S IF EVERYONE MAKES 200 POSTINGS ONLY, AND IF ONLY 5 PERSONS RESPOND!!!!!
When your name is no longer on the list, you just take the latest posting that is appearing in the newsgroups, and SEND OUT ANOTHER $5 TO THE NAMES ON THE LIST, PUTTING YOUR NAME AT 5 AGAIN. And start posting again. The thing to remember is, do you realize that THOUSANDS OF PEOPLE ALL OVER THE WORLD ARE JOINING THE INTERNET AND READING THESE ARTICLES EVERY DAY, JUST LIKE YOU ARE RIGHT NOW!!! So can afford $5 dollars and see if it really works? I think so.....
People have said, "What if the plan is played out and no one
sends you
the money?" So what! What are the chances of that happening when there are TONS OF NEW HONEST USERS AND NEW HONEST PEOPLE who are joining the

Internet and newsgroups everyday and are willing to give it a try?
Estimates are at 20,000 to 50,000 new users, every day, with THOUSANDS
of those joing the actual Internet. Remember, play FAIRLY and HONESTLY
and this WILL WORK, I PROMISE YOU!!! You just have to be honest. Make
sure you print this article out RIGHT NOW, also, try to keep a list of
everyone that sends you money and always keep an eye on the mnewsgroups
to make sure everyone is playing fairly. REMEMBER, HONESTY IS THE BEST
POLICY. YOU DON'T NEED TO CHEAT THE BASIC IDEA TO MAKE MONEY!! GOOD
LUCK TO ALL AND PLEASE PLAY FAIRLY AND YOU WILL REAP THE HUGE REWARDS
FROM THIS, WHICH IS TONS OF EXTRA CASH!!!
**By the way, if you try to decieve people by posting the

messages with
your name on the list and not sending the money to the people already

on
the list, you will not get much. Someone I talKed to knew someone who
did that and he only made $150 dollars, and that's AFTER seven or eight
weeks! Then he sent the 5 $1 bills, people added him to their lists,
and in 4-5 weeks, he had over $10K.
THIS IS THE FAIREST AND MOST HONEST WAY I HAVE EVER SEEN TO SHARE THE
WEALTH OF THE WORLD WITHOUT COSTING ANYTHING BUT OUR TIME!!!

Subject: Looking for equipment selection advice Yaesu vs Icom vs Kenwood for satellite

Hi,
I am interested in getting a new radio for P3D. The 736 seems to be the historical favorite but there are new radios from Kenwood and Icom. Has anyone compared the features or performance? Do the Kenwood or Icom radios have the same special satellite oriented features that the Yaesu 736 has? If you were going to buy one which one would you choose and why?

I am planning to operate on 1.2 GHz in addition to 2 and 440.

I would also be interested to know what you would recommend for 2.3 GHz.

Thanks very much for you advice in advance.

Hi just a quick note-- the Two meter antenna was broken on the first EVA and they did a second EVA today and did a makeshift repair which will work, but the signal will not be as strong or as steady as before.. but it will work for the time being, they will fix the coax and on the next planned EVA make the proper repair.. I have no idea when that will be.. 73 DAVE N1PPP

What's the chance of getting DirecTV or USSB to carry NASA Select if we
all wrote or called? Anyone have any inside info on these DSS providers?

From: kwalker@qb.island.net (Ken Walker)
Subject: PacSat for Offshore Sailing

I have not followed the development of the packet capable amateur satellites
but I believe there are some in operation. As a sometimes off shore sailor
and a radio amateur, I am asked by fellow sailors whether they should get a
ham licence and how effective it would be. I tell them about 20m ssb, about
hf packet and amtor but I also go on about how low earth store and forward
packet satellites will be available one day. But maybe they are now?

The ideal packet system for offshore use would allow the offshore sailing ham
to prepare a packet message and the software would determine when a bird is
overhead and send up the message and pick up any waiting mail. Are these

birds ready to do this? Is there software that would do it? Am I right that these can be worked with small omni antennas?

I think they require dual band operation? Which bands? Hopefully they are bands that can be worked with readily available dual band mobile rigs?

I have thought about this from time to time but I am not up to date on what is available. Anyone want to try to update me??

Thanks.

Subject: RS-10 /RS-15 what are you using?

Greetings all,
this post is a call for information. I am trying to setup a satellite station
for my grandfather, (a 78 YO ham..kb2wfn) and I figured that you all could help me.
What equipment are you all using for up / downlink radios..
, antennas? The operating budget is around $600.00 but if your system cost more than that feel free to tell me about it. I just wanted to get an idea of
what everyone was using.

73's Jason N1RWY

UP: Kenwood TR9130 8 watts 5/8 colinear // 3ele beam both @ 15 feet.

I've used a IC251A with 10 watts into a Jpole, and a beat-up Undien 2510
fed with a 100 foot long dipole. No problem working ssb or CW on RS-10,
CW only on RS15.

When I added a Hamtronics downconverter for 70cm, I could work FO-20
quite often as well.

Kurt, when I wrote my routines for FT736R CAT (published on this
BBS) I discovered that Yaesu did a great job and introduced only 2
bugs.

One was that if the radio is in (say) 2m RX /70cm TX, then the CAT cannot
change it to 70cm RX /2m TX! This is because you have to make the
changes in two stages, e.g. 2/70 -> 2/2 -> 70/2.

Obviously the middle step is inadmissable. If your radio has a third
module (e.g.
23cm), then you can go 2/70 -> 23/70 -> 23/2 -> 70/2.

The other bug concerns reading the s-meter and squelch. This
sometimes misses the last byte.

So your problem is not a fault of the tracker-box code.

Subject: Mir's EVA

from Chris Van deBerg
MIRNEWS 10 DECEMBER 1996 (338)

2d Spacewalk (EVA) 22d Mainexpedition (ME) MIR:

This EVA took place on 9.12.1996 between 1352UTC (opening hatch) and 2028UTC (closing hatch). So a duration of 6 hrs 36 mins. The EVA lasted longer for Korzun wished to accomplish all what had to be done and there also was a problem with something which bungled loose. Before return they restored the connection of the radio-amateurantenne for the 145 mc. Probably this antenne had been disconnected by accident during the 1st EVA. They connected the antenna again and while they were flying over Chile and Brasil they asked John Blaha to listen out on the 145.800 mc to check whether the antenne was working or not. There was no traffic on that frequency in that area and so they had to wait until they came in range of European amateurs. I asked the English radio-amateur Pat Gowen (G3IOR) to give calls on 145.800 mc as soon as MIR would come in range (at abt. 1934UTC). So he did and these signals could be heard by John Blaha while MIR was flying over France. He reported this to the still being on EVA Korzun and Kaleri and congratulated them with their success. Korzun urged John not to transmit, but to listen only. The cosmonauts fully accomplished their tasks: installing the truss construction Rapana at the truss Ferma-3 and the replacement of the Kurs-antenna on the outersurface of the P.Kh.O. (transitionsection). John Blaha who stayed inside the complex took care of the communications and executed commands given to him by TsUP. He gave the cosmonauts all possible moral and technical help. The cosmonauts and Blaha did an excellent job during this EVA, they gave an example of fruitful international cooperation and so they all deserve a loud: 'MOLODTSY' (very well done).
Of course the cosmonauts were very tired after the EVA and back in the airlock they had to do hard labour to put off their spacesuits.
Just before midnight Korzun could be heard in a contact with a Portugese radio-amateur via the repaired antenne for the 145 mc.

Thusfar there are no more EVA's on schedule for this crew.
I hope this fills in the gaps, it was working much better tonight, they must have found something else..

I believe the local cable company (TCI) here in the Clear Lake area of Houston (near Johnson Space Center) carries NASA TV (NASA Select is a non-term....). It's been years since I was a subscriber, but back then, they were just carrying it during missions. I have heard they are carrying it 24 hours a day, now. But, I don't know that firsthand. I believe a lot of people asked the cable company for it and TCI (then Storer Cable) accomodated.

I suppose the same could happen with the DSS groups. Also, with local cable companies, if enough of their subscribers request it. Having a few school administrations backing the request might help, too.

Press for mission and non-mission airing of NASA TV. Might as well go all the way. Maybe it can be compromised down to mission coverage.

Good luck,

Subject: RS-10 /RS-15 what are you using?

I am using up to 100w SSB with a J-pole ant for the uplink, & this is plenty for RS-10, but not good enough for RS-15 (steerable beam in progress).

I use a horizontal loop at about 25ft for 10m receive, & this works well for on RS-10, only ok for RS-15 on near-overhead passes. I find vertical antennas too noisy.

Brad:
I'm using a dipole cut for 10 meters, up only about 15 feet, and it works just fine into a Uniden HR2600. For my uplink, I have a 5/8 wave homebrew groundplane up 30', which I feed with 25 watts from a Yaesu FT-290R Mk II. RS-10 has a very sensitive receiver and an excellent transmitter. Much more than this would be overkill. Hope to work you on the birds someday.

$$$$ $50,000 for the New Year $$$$

Take five minutes to read this and it WILL change your life.

The Internet has grown tremendously. It doubles in size every 4 months. think about it. You see those 'Make.Money.Fast' posts more and more.
That's ... because it WORKS ! So I thought, all those new users might make it work. And I decided to try it out, a few months ago. Besides, whats $5.00, I spend more than that in the morning on my way to work on coffee and cigs for the day. So I sent in my money and posted.Everyone was calling it a scam, but there are SO many new users from AOL, Netcom, etc. they will join in and make it work for you.

Well, two weeks later, I began recieving bucks in the mail! I couldn't believe it! Not just a little, I mean big bucks! At first only a few hundred dollars, then a week later, a couple of thousand, then BOOM.
By the end of the fourth week, I had recieved nearly $47,000.00. It came from all over the world. And every bit of it perfectly legal and on the up and up. I've been able to pay off all my bills and still had enough left over for a nice vacation for me and my family.

Not only does it work for me, it works for other folks as well. Markus Valppu says he made $57,883 in four weeks. Dave Manning claims he made $53,664 in the same amount of time. Dan Shepstone says it was only $17,000 for him. Do I know these folks? No, but when I read how they say they did it, it made sense to me. Enough sense that I'm taking a similar chance with $5 of my own bucks. Not a big chance, I admit--but one with incredible potential, because $5 is all anyone ever invests in this system. Period. That's all Markus, Dave, or Dan invested, yet their $5 netted them tens of thousands of dollars each, in a safe, legal, completely legitimate way. Here's how it works in 3 easy steps:

STEP 1.

Invest your $5 by writing your name and address on five seperate pieces of paper along with the words: "PLEASE ADD ME TO YOUR MAILING LIST." (In this way, you're not just sending a dollar to someone; you're paying for a legitimate service.) Fold a $1 bill inside each paper, and mail them by standard U. S. Mail to the following five addresses:

1-Aaron McDaniel
2014 Powell Dr.
ElCajon, Ca 92020

2-Faroon Khan
12343 77A Avenue
Surrey, BC V3W2W9

3-Hoffman Eric
3150 Riviere-Cachee
Boisbriand, PQ
Canada
J7H 1A3

4-Stuart Koch
Connolly Hall Box C115
501 E. St. Joseph
Rapid City, SD 57701-3995

5-Karen Lundgren
3889 Kencrest Ave.
Halifax, NS
Canada
B3K 3L4

STEP 2.

Now remove the top name from the list, and move the
other names up.This way, #5 becomes #4 and so on.
Put your name in as the fifth one on the list.

STEP 3.

Post the article to at least 250 newsgroups. There are at
least 19000 newsgroups at any given moment in time.
Try posting to as many newsgroups as you can. Remember
the more groups you post to, the more people will see your
article and send you cash!

STEP 4.

You are now in business for yourself, and should start seeing
returns within 7 to 14 days! Remember, the Internet is new
and huge. There is no way you can lose.

Now here is how and why this system works:

Out of every block of 250 posts I made, I got back 5 responses.
Yes, thats right,only 5. You make $5.00 in cash, not checks or
money orders, but real cash with your name at #5.

Each additional person who sent you $1.00 now also makes 250
additional postings with your name at #4, 1000 postings. On
average then, 50 people will send you $1.00 with your name at
#4,....$50.00 in your pocket!

Now these 50 new people will make 250 postings each with your
name at #3 or 10,000 postings. Average return, 500 people= $500.
They make 250 postings each with your name at #2= 100,000
postings=5000 returns at $1.00 each=$5,000.00 in cash!

Finally, 5,000 people make 250 postings each with your name at
#1 and you get a return of $60,000 before your name drops off

the list.And that's only if everyone down the line makes only 250 postings each! Your total income for this one cycle is $55,000.

From time to time when you see your name is no longer on the list, you take the latest posting you can find and start all over again.

The end result depends on you. You must follow through and repost this article everywhere you can think of. The more postings you make, the more cash ends up in your mailbox. It's too easy and too cheap to pass up!!!

So thats it. Pretty simple sounding stuff, huh? But believe me, it works. There are millions of people surfing the net every day, all day, all over the world. And 100,000 new people get on the net every day. You know that, you've seen the stories in the paper. So, my friend, read and follow the simple instructions and play fair. Thats the key, and thats all there is to it. Print this out right now so you can refer back to this article easily. Try to keep an eye on all the postings you made to make sure everyone is playing fairly. You know where your name should be.

If you're really not sure or still think this can't be for real, then don't do it. But please print this article and pass it along to someone you know who really needs the bucks, and see what happens.

REMEMBER....HONESTY IS THE BEST POLICY.YOU DON'T
NEED TO CHEAT THE BASIC IDEA TO MAKE THE BUCKS!
GOOD LUCK TO ALL, AND PLEASE PLAY FAIR AND YOU WILL
WIN AND MAKE SOME REAL INSTANT FREE CASH!

*** By the way, if you try to deceive people by posting the messages with your name in the list and not sending the bucks to the people already included, you will not get much. I know someone who did this and only got about $150 (and that's after two months). Then he sent the 5 bills, people added him to their lists, and in 4-5 weeks he had over $10,000!

TRY IT AND YOU'LL BE HAPPY!!! :o) !!!!!!!!!!

From: ashleyb@ohsu.edu
Subject: Best Ant for RS-10 Down Link

To The Group:

I'm in the process of setting up a satelite system. A few local guys
are having fun with RS-10. What I would like to do is to set up a nice
beginners station. I currently have a IC-275A with a GP-3 for the Up link
and two different HF xcvr's to set up the down link. My question is would
an HF vertical like the Ringo ranger AR-10 work or maybe an inverted V
dipole. I am reading the ARRL satelite handbook but I'd like to hear from
some people actually working the birds. Also should I get a pre-amp and if
so does anyone have any recommendations ie buy,build?? Thanks for your
help.

RS-10 has a very strong downlink for an amatuer satellite. I put up a Ringo, but can honestly say that it didn't offer any better performance than a simple dipole.

Try orienting the dipole for best north/south reception. Don't worry about a pre-amp. I used a Radio Shack 10m rig to listen to my downlinks.

Subject: free money

Oh! My? $$$$
THIS IS THE FAIREST MOST HONEST WAY I KNOW TO SHARE THE WEALTH! Hello! (Save this file now...it will save you some time typing later if you decide to try this)
Would you like to make thousands of dollars, quick, legally, with NO CATCH? Then keep reading....please take five minutes to read this article it will change your life, just like it did mine. It's true!

You can make up to or over $50,000 dollars in 4-6 weeks, maybe sooner! I SWEAR I'M NOT LYING TO YOU, AND THIS IS NOT A SCAM! If you're intrested, keep reading; if you're not, I apologize for wasting your time.
Here we go. A little while back, I was browsing through these newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars in weeks with only an initial investment of $5! So, I thought, "Yeah, right, must be a scam", but I was curious, like most of us , so I kept reading. Anyway, it
said that you send $1 to each of the 5 names and addresses stated in the article. You then place your own name and address in the article at the bottom of the list at #5, and post the article in at least 200 newsgroups (there are thousands). No catch, that was it!
So after thinking it over, talking to a few people first, I tried it. I figured what have I got to lose except for 5 stamps and $5, right? Well, guess what...within 7 days, I started getting money in the mail! I was shocked! I still figured it would end soon, and didn't give it another thought. But then money kept coming IN, tripling in size and multiplying by 10-20 times the amount that I got the first week! In my first week I made about 20 to 30 dollars. But by the end of the second week, I had made a total of over $1,000!!!! In the third week, I had over $10,000 dollars, and it's still growing. This is my fourth week (Oct 11) and I've made about $42,000 TOTAL, and the money is still coming in.....
Let me tell you how this works and most importantly, WHY it works...also, make sure you print a copy of the article NOW, so you get the information off of it, and begin making money.

The process is very simple, and it consists of 3 EASY steps:

STEP 1: Get 5 seperate pieces of paper and write the following on each sheet of paper..."PLEASE PUT ME ON YOUR MAILING LIST. YOU ARE NUMBER 5." (etc. to number 1) Get five $1 bills and place ONE inside each piece of paper that
you just wrote on, and fold each piece of paper so the bill will not be seen in the envelope (otherwise, nosey people who like to steal envelopes with money in it will get yours). Put one paper inside the envelope and seal it. Do the same for all 5. You should now have 5 envelopes sealed, EACH have a piece of paper AND a $1 bill stuffed inside of the paper. Make sure those words that were stated above are stated on each paper. What you are doing is creating a service by this, this is PERFECTLY LEGAL. Now then, mail the 5 envelopes with the paper and $1 in each to the following 5 addresses:

1. P.DEBOUZY, 9 rue des Lavandieres, 78530 BUC, FRANCE.
2. J. MAHON, 750 Highland Dr. Apt. #210, Ojai, Calif. 930234.
3. P. Rae, 209 Oak Butte CT., Folsom. California. 95630. USA5.
4. M. Rapp, 801 Mockingbird Ct., Hinesville, GA 31313 USA
5. J. Rhodes, 5011 Stoneview Dr., Charlestown, IN 47111

STEP 2: Now take the #1 name off the list that you see above, move the other 4 names up (5 becoming 4, 4 becoming 3, ect.) and put YOUR NAME as number 5 on the list. You can slightly alter this article if you need to, editing what you need to edit.

STEP 3: Post your amended article (with your name at #5) to at least 200 news groups (I think there are close to 18,000 of them). All you need is say, at least 200. HOW TO DO THIS: If you have Netscape 3.0 do EXACTLY the following:

1) Click on any news group like normal, THEN click on 'TO NEWS', which is on the far left when you're in the newsgroups page. This will bring up a box to type a message in.

2) Leave the newsgroup box like it is, CHANGE the subject box to something flashy, like, "NEED CASH $$$ READ HERE $$$" or "FAST CASH"!!!

3) Tab once and you should be ready to type. Now, retype (only once) THIS whole article WORD FOR WORD, except to insert your name at #5, and to remove #1 off the list, plus any other small changes you think you need to make. Keep almost all of it the SAME!

4) When you're done typing the WHOLE article, click on FILE in THIS BOX, RIGHT ABOUVE SEND, NOT WHERE IT SAYS NETSCAPE NEWS ON THE FIRST BOX. Click on SAVE AS when you're under FILE. Save you artcle as a text file to your C: or A: drive. DO NOT SEND OR POST YOUR ARTICLE UNTIL YOU DO THIS. Once saved, move on to number 5 below.

5) If you still have all of your text, send or post to this newsgroup now by just clicking send, which is right below FILE, and right above Cc: .

6)Here's where you're going to post all 200. OK, click on any news group then click on 'TO NEWS', again in the top left corner. Leave the NEWSGROUPS BOX alone again, put a flashy subject title in the SUBJECT BOX, hit TAB once you're in the body of the message, and then click on ATTACHMENTS, which is below the SUBJECT BOX. You will get another box to come up. Click on ATTACH FILE, then find YOUR file that you saved; click once on the file, and then click OPEN' now click on OK; if you did this right, you should see your file name in the attachments box, and it will be shaded green.

IF YOU USE IE EXPLORER IT'S JUST AS EASY...HOLDING DOWN THE LEFT MOUSE BUTTON, HIGHLIGHT THIS ARTICLE. THEN PRESS THE "CRTL" KEY AND THE "C" KEY AT THE SAME TIME TO COPY THIS ARTICLE. THEN PRINT THIS ARTICLE FOR YOUR RECORDS TO HAVE THE NAMES OF THOSE YOU WILL BE SENDING $1 BILLS TO. NEXT GO TO THE NEWS GROUPS AND PRESS "POST AN ARTICLE" A WINDOW WILL OPEN. TYPE IN YOUR HEADLINE IN THE SUBJECT AREA AND THEN CLICK IN THE LARGE WINDOW BELOW. PRESS "CRTL" AND THEN "V" AND THE ARTICLE WILL BE PLACED IN THE WINDOW. IF YOU WANT TO EDIT THE ARTICLE, DO SO AND THEN HIGHLIGHT AND COPY IT AGAIN. NOW EVERYTIME YOU POST THE ARTICLE

IN
A NEW NEWSGROUP ALL YOU HAVE TO REPEAT "CTRL" AND "V" AND PRESS POST.

7)That's it. Each time you do this, all you have to do is type in a different newsgroup, so that way, it posts to 200 DIFFERENT newsgroups, you see? Now you just have 199 to go!! (Don't worry, each one takes about 30 seconds, once you get used to it) REMEMBER 200 IS THE MINIMUM. The more you post the more money you will make.

AND THAT'S IT!!! THAT'S THE ONLY 3 STEPS THERE IS!!!

You are now in the mail order business and will start recieving your $1 envelopes from various people all over the world within days. HINT THE MORE NEWSGROUPS YOU POST TO, THE MORE MONEY YOU WILL MAKE. You may want to rent a PO Box eventually because of all the mail. If you wish to stay anonymous, you can come up with a name, such as "manager" or "investor". Just make sure all the addresses are CORRECT, please.

LET ME TELL YOU WHY THIS SYSTEM WORK!!!!

Out of every 200 postings, let's say I ONLY recieve 5 replies, which is actually VERY LOW. So I made 5 dollars with my name at #5. Now then, each person who just sent me $1 makes, say only 200 postings, now with your name at number 4, WHICH IS A TOTAL OF 1000 POSTINGS, not including yours too. 50 people send you $1 now; thats $50 you just made! Now, then your new 50 agents post 200 each with YOUR NAME AT NUMBER 3, OR 10,000 POSTING (50x200). Average return is 500 at $1 each is $500. They make 200 postings, which is 5,000 returns at $1 each, which is $5000 dollars! And finally, 5000 people make 200 postings wach with YOUR NAME AT NUMBER 1. YOU NOW GET A RETURN OF $50,000 BEFORE YOUR NAME DROPS OFF THE LIST. AND THAT'S IF EVERYONE MAKES 200 POSTINGS ONLY, AND IF ONLY 5 PERSONS RESPOND!!!!!
When your name is no longer on the list, you just take the latest posting that is appearing in the newsgroups, and SEND OUT ANOTHER $5 TO THE NAMES ON THE LIST, PUTTING YOUR NAME AT 5 AGAIN. And start posting again. The thing to remember is, do you realize that THOUSANDS OF PEOPLE ALL OVER THE WORLD ARE JOINING THE INTERNET AND READING THESE ARTICLES EVERY DAY, JUST LIKE YOU ARE RIGHT NOW!!! So can afford $5 dollars and see if it really works? I think so.....
People have said, "What if the plan is played out and no one sends you
the money?" So what! What are the chances of that happening when there are TONS OF NEW HONEST USERS AND NEW HONEST PEOPLE who are joining the Internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with THOUSANDS of those joing the actual Internet. Remember, play FAIRLY and HONESTLY and this WILL WORK, I PROMISE YOU!!! You just have to be honest. Make sure you print this article out RIGHT NOW, also, try to keep a list of everyone that sends you money and always keep an eye on the mnewsgroups to make sure everyone is playing fairly. REMEMBER, HONESTY IS THE BEST POLICY. YOU DON'T NEED TO CHEAT THE BASIC IDEA TO MAKE MONEY!! GOOD LUCK TO ALL AND PLEASE PLAY FAIRLY AND YOU WILL REAP THE HUGE REWARDS FROM THIS, WHICH IS TONS OF EXTRA CASH!!!
**By the way, if you try to decieve people by posting the

messages with
your name on the list and not sending the money to the people already

on
the list, you will not get much. Someone I talKed to knew someone who
did that and he only made $150 dollars, and that's AFTER seven or eight
weeks! Then he sent the 5 $1 bills, people added him to their lists,
and in 4-5 weeks, he had over $10K.
THIS IS THE FAIREST AND MOST HONEST WAY I HAVE EVER SEEN TO SHARE THE
WEALTH OF THE WORLD WITHOUT COSTING ANYTHING BUT OUR TIME!!!

satellite

Hi,
I am interested in getting a new radio for P3D. The 736 seems to be the
historical favorite but there are new radios from Kenwood and Icom. Has
anyone compared the features or performance? Do the Kenwood or Icom
radios have the same special satellite oriented features that the Yaesu
736 has? If you were going to buy one which one would you choose and
why?

I am planning to operate on 1.2 GHz in addition to 2 and 440.

I would also be interested to know what you would recommend for 2.3 GHz.

Thanks very much for you advice in advance.

Hi just a quick note-- the Two meter antenna was broken on the first
EVA and they did a second EVA today and did a makeshift repair which
will work, but the signal will not be as strong or as steady as
before.. but it will work for the time being, they will fix the coax
and on the next planned EVA make the proper repair.. I have no idea
when that will be.. 73 DAVE N1PPP

What's the chance of getting DirecTV or USSB to carry NASA Select if we
all wrote or called? Anyone have any inside info on these DSS providers?

From: kwalker@qb.island.net (Ken Walker)
Subject: PacSat for Offshore Sailing

I have not followed the development of the packet capable amateur satellites but I believe there are some in operation. As a sometimes off shore sailor and a radio amateur, I am asked by fellow sailors whether they should get a ham licence and how effective it would be. I tell them about 20m ssb, about hf packet and amtor but I also go on about how low earth store and forward packet satellites will be available one day. But maybe they are now?

The ideal packet system for offshore use would allow the offshore sailing ham to prepare a packet message and the software would determine when a bird is overhead and send up the message and pick up any waiting mail. Are these birds ready to do this? Is there software that would do it? Am I right that these can be worked with small omni antennas?

I think they require dual band operation? Which bands? Hopefully they are bands that can be worked with readily available dual band mobile rigs?

I have thought about this from time to time but I am not up to date on what is available. Anyone want to try to update me??

Thanks.

Subject: RS-10 /RS-15 what are you using?

Greetings all,
this post is a call for information. I am trying to setup a satellite
station
for my grandfather, (a 78 YO ham..kb2wfn) and I figured that you all could
help me.
What equipment are you all using for up / downlink radios..
, antennas? The operating budget is around $600.00 but if your system cost
more than that feel free to tell me about it. I just wanted to get an idea
of
what everyone was using.

I've used a IC251A with 10 watts into a Jpole, and a beat-up Undien 2510
fed with a 100 foot long dipole. No problem working ssb or CW on RS-10,
CW only on RS15.

When I added a Hamtronics downconverter for 70cm, I could work FO-20
quite often as well.

Kurt, when I wrote my routines for FT736R CAT (published on this
BBS) I discovered that Yaesu did a great job and introduced only 2
bugs.

One was that if the radio is in (say) 2m RX /70cm TX, then the CAT cannot
change it to 70cm RX /2m TX! This is because you have to make the
changes in two stages, e.g. 2/70 -> 2/2 -> 70/2.

Obviously the middle step is inadmissable. If your radio has a third
module (e.g.
23cm), then you can go 2/70 -> 23/70 -> 23/2 -> 70/2.

The other bug concerns reading the s-meter and squelch. This
sometimes misses the last byte.

So your problem is not a fault of the tracker-box code.

Subject: Mir's EVA

from Chris Van deBerg
MIRNEWS 10 DECEMBER 1996 (338)

2d Spacewalk (EVA) 22d Mainexpedition (ME) MIR:

This EVA took place on 9.12.1996 between 1352UTC (opening
hatch) and 2028UTC (closing hatch). So a duration of 6
hrs 36 mins. The EVA lasted longer for Korzun wished to
accomplish all what had to be done and there also was a
problem with something which bungled loose. Before
return they restored the connection of the radio-
amateurantenne for the 145 mc. Probably this antenne had
been disconnected by accident during the 1st EVA. They

connected the antenna again and while they were flying
over Chile and Brasil they asked John Blaha to listen
out on the 145.800 mc to check whether the antenne was
working or not. There was no traffic on that frequency
in that area and so they had to wait until they came in
range of European amateurs. I asked the English radio-
amateur Pat Gowen (G3IOR) to give calls on 145.800 mc as
soon as MIR would come in range (at abt. 1934UTC). So he
did and these signals could be heard by John Blaha while
MIR was flying over France. He reported this to the
still being on EVA Korzun and Kaleri and congratulated
them with their success. Korzun urged John not to
transmit, but to listen only. The cosmonauts fully
accomplished their tasks: installing the truss
construction Rapana at the truss Ferma-3 and the
replacement of the Kurs-antenna on the outersurface of
the P.Kh.O. (transitionsection). John Blaha who stayed
inside the complex took care of the communications and
executed commands given to him by TsUP. He gave the
cosmonauts all possible moral and technical help. The
cosmonauts and Blaha did an excellent job during this
EVA, they gave an example of fruitful international
cooperation and so they all deserve a loud: 'MOLODTSY'
(very well done).
Of course the cosmonauts were very tired after the EVA
and back in the airlock they had to do hard labour to
put off their spacesuits.
Just before midnight Korzun could be heard in a contact
with a Portugese radio-amateur via the repaired antenne
for the 145 mc.

Thusfar there are no more EVA's on schedule for this
crew.
I hope this fills in the gaps, it was working much better tonight,
they must have found something else..

I believe the local cable company (TCI) here in the Clear Lake area of
Houston (near Johnson Space Center) carries NASA TV (NASA Select is a
non-term....). It's been years since I was a subscriber, but back then,
they were just carrying it during missions. I have heard they are carrying
it 24 hours a day, now. But, I don't know that firsthand. I believe a lot
of people asked the cable company for it and TCI (then Storer Cable)
accomodated.

I suppose the same could happen with the DSS groups. Also, with local cable companies, if enough of their subscribers request it. Having a few school administrations backing the request might help, too.

Press for mission and non-mission airing of NASA TV. Might as well go all the way. Maybe it can be compromised down to mission coverage.

Good luck,

Subject: RS-10 /RS-15 what are you using?

I am using up to 100w SSB with a J-pole ant for the uplink, & this is plenty for RS-10, but not good enough for RS-15 (steerable beam in progress).

I use a horizontal loop at about 25ft for 10m receive, & this works well for on RS-10, only ok for RS-15 on near-overhead passes. I find vertical antennas too noisy.

Methinks a "C" band dish setup is required. I don't think the digital
guys like Dish, USSB, Primestar, etc. are carrying NASA TV. For the
"bird" and transponder, check a copy of Satellite Times.

Subject: PacSat for Offshore Sailing

Ken,

I may not be of much help but I have assisted W4AVO (George) put his
station together. He is a live aboard and blue water sailor. Last year
he was in the Bahamas and will be there again this year. He has been on
UO22 and has used his station very succesfully. AF4N Wes and I have both
put in a good bit of time getting his boat ready (all three of us are
sailors). George just went off internet and will be on the air for the
next six months. Wes and I will be on internet and can offer some
suggestions.

The first point is that it is not difficult and even underway the system
works just fine. However antenna placement is a problem. George uses one
J pole for up link and a small yagi for down link (3 elements). He
rotates it 180 degrees during the pass and has no difficulity going from
the radio to the cockpit to make the change. Since UO22 is basically
automated his computer does all the work.

He uses a 386 that is not fast and is just a work horse.

If I can be of help please contact me.

1. I have about 100ft of feedline
2. I know the J-pole is not properly tuned yet (it's igloo-time up here)
3. I am surrounded by apartment buildings
4. In my experience, & in my situation, low power & omni-antennas work only when the satellite is on a near-overhead pass, and the satellite is not busy. I have almost given up working weekends, due to being stomped on.
5. If you want to work passes other than overhead, then because of the path loss, there is no choice but to increase power &/or antenna gain.
6. I was trying to give this guy the confidence that with his TX set-up he darn well ought to be able to make contacts.

>Thanks in advance for any help.

You would need a c band satellite dish and receiver. I would think a 7 foot would be about the minimum to get great video. you might be able to get by with a 6 foot if you live near the center of the U.S.

The satellite is over to the east - 69 degrees west or so.

The good news is that you can scrounge together a system pretty cheaply. Lots of people have old ones they aren't using anymore. You'd need a few bags of cement and a pole, some cable to run into the house. If you only want it for the one channel, this would be really easy and cheap to do.

I think it's going to move to a stronger satellite in the central arc sometime
fairly soon. The good news is the signal would be stronger. The bad news is that the new satellite would have others sats nearby, meaning the smaller your
dish the greater the crosstalk. If you live on the west coast, it may be kind of low on the horizon in it's present location. Let me know where you live and
I'll see if I can give you the particulars. Email me....

From: Guenter.Stautz@t-online.de (gs)
Subject: NoNo?:TrakBox, Ft736R and 23cm(P3D)

Hi All
after long nights with my TrakBox version 3.3h , I came to the conclusion, that TrakBox designers had never in mind to let it work on 23 cm with the Ft736R. ___Am I right ????___
The case: I'm a newcomer in the satellite operators community and I'm trying to prepare my rig for Phase 3D in spring 1997.
So I tried to program satellites with 23cm RX or TX channels. But this failed. My FT736R did not switch to 1296. Mhz, neither on RX nor TX.
The Ft736R is ok, because CAT programming directly via PC works.
I analysed the CAT commands from TrakBox to FT736R and found the following hex command sequences for a 70cm/23cm satellite example:
0,0,0,0,0,
C9,60,0,0,1E, This is a dummy switching to 1296Mhz done in the
0,0,0,0,80, Oct. 18 '92 update for TrakBox version 2.05
0,0,0,0,0,
43,21,0,0,2E, This is the Sat. TX Frequency __is ok__.
0,0,0,0,80,
0,0,0,0,0,
8,0,0,0,27, This is TX Mode
8,0,0,0,17, This is RX Mode
0,0,0,0,80,
0,0,0,0,0,

12,96,34,49,1E, And here is the problem: My assumed RX frequency
0,0,0,0,80, 1296.34491 Mhz is not properly set. It should be:
C9,63,44,91 and not 12,96,....., and the dummy
above should be set to 144Mhz
Any help??
Thanks and sorry for this long message.

From: "Erik Skovgaard" <Erik_Skovgaard@bc.sympatico.ca>
Subject: Best Ant for RS-10 Down Link

Brad,

I use a sloping dipole on 10 m to receive RS-10. It always has a very
strong signal here. I added a Hamtronics pre-amp recently and it does
boost the signal a few S units and also provides a bit of selectivity to

reject out-of-band signals.

For uplink I have used a 1/4 wave vertical and about 80 Watts. I only
tried CW since the amp was not linear, but I got very good reports.

RS-10 could use some activity, so go ahead. Hope to wrk u there.

Subject: FT290/790 9600 Bd mods?

Bob,

this is info about 9600 bps mods for FT290/790 from my acrhive.
I used it some time ago and it run well.
I hope it will be usefull for you.

MODEM @WW de:DL6DBN 23.09.90 07:50 0 1568 Bytes
FT290/790RII mods. PSK/9k6
*** Bulletin-ID: 229008DB0SGL ***

900922/0911z DK0MWX, 900922/0714z DB0SGL
de DL6DBN @ DB0SGL

How to modify YAESU FT-290 RII and FT-790RII
for 1200 BpS PSK and 9600 BpS FSK

As you know, for 1200 BpS PSK/FM a direct injektion of the signal into the FM-varicap is recommended and for 9600 BpS FSK necessary. For 9600 BpS you will need the FM-discriminator output.

Due to SM-Technology the following modifications are not easy to manage.
FT-790RII in ()

The FM-discriminator output is at pin 9 of Q4001 (Q402) MC3357P. Use a shielded cable to connect this pin with your 9k6-modem input. The IF-bandwidth of CF01 (CF01) CFW455F seems to be to small for very good results, so I recommend to exchange it with a CFW455D. With good RF-strength and proper tuning the CFW455F can fit as well.

The more complicate modification is the injection point. Inject your TX-signal below the main unit where R30124, C30120 and C30126 (R30117, C30117 and C30124) come together (all SMD). Is it necessary to say, use a shielded cable? As long as no other AF from the tone unit or the microphon reaches this point you must not cut any connections. But adjust your FM-deviation.

I made this changes in both radio sets and had already good contacts via UoSAT-OSCAR 14. So good luck and success.

From: r.PHelan@www.mac.ul.IE (Robbie Phelan)
Subject: Ham-Space Digest V96 #421

--=====================_850390197==_
Content-Type: text/plain; charset="us-ascii"

I attach a Bmp format drawing of Crossed Dipoles for 10Mtrs which is the
ideal antenna for receiving the RS sats ...
I hope you receive it ok!

Regards Robbie EI8ESB

From: dbarillo@texas.net (Dave)
Subject: need info- 10 meter rec for mode A

Im looking for an inexpensive reciever (or tranciever) for 10 M SSB
to use on mode A-- thinking of the Uniden HR 2510 or the radio shack
HTX 100 does anyone have experiences/strong opinions on the pros and
cons of these radios, or other suggestions for a easy way to recieve

10 m SSB? Thanks Dave

From: rkling@umich.edu (Rob Kling)
Subject: WTB FT 736

Turn that underutilized FT-736 Satellite radio into cold hard cash! I am looking to purchase a good used FT726R
with modules(6M and/or 22Mhz and/or 1.2Ghz). Please reply if you are willing to part with yours.

Rob Kling(N8YBV)

From: "Roger E. Koss" <kossr@edl1.ksc.nasa.gov>
Subject: Best Ant for RS-10 Down Link

Brad:
I'm using a dipole cut for 10 meters, up only about 15 feet, and it
works just fine into a Uniden HR2600. For my uplink, I have a 5/8 wave
homebrew groundplane up 30', which I feed with 25 watts from a Yaesu
FT-290R Mk II. RS-10 has a very sensitive receiver and an excellent
transmitter. Much more than this would be overkill. Hope to work you on
the birds someday.

73 de Roger, KD4ITU

From: ashleyb@ohsu.edu
Subject: Best Ant for RS-10 Down Link

To The Group:

I'm in the process of setting up a satelite system. A few local guys
are having fun with RS-10. What I would like to do is to set up a nice
beginners station. I currently have a IC-275A with a GP-3 for the Up link
and two different HF xcvr's to set up the down link. My question is would
an HF vertical like the Ringo ranger AR-10 work or maybe an inverted V
dipole. I am reading the ARRL satelite handbook but I'd like to hear from
some people actually working the birds. Also should I get a pre-amp and if
so does anyone have any recommendations ie buy,build?? Thanks for your
help.

RS-10 has a very strong downlink for an amatuer satellite. I put up a Ringo, but can honestly say that it didn't offer any better performance than a simple dipole.

Try orienting the dipole for best north/south reception. Don't worry about a pre-amp. I used a Radio Shack 10m rig to listen to my downlinks.

From: wa4twa@versoft.com
Subject: Cu-Seeme Video conferencing

Does anyone know of anyone using Video Conferencing on computer/internet in conjunction with amateur redio? I have been in contact with hundreds of people from around the world on Cu-Seeme and have run into only one ham. Is there a freq. HF or VHF where hams may hang out that use both modes..computer and radio. I believe this would be a natural progression from Slow Scan. We now can SEE the people we are in QSO with.

If you are interested in setting up a sched. and have Video COnferencing capabilities or are just interested drop me an e-mail,

Subject: free money

Oh! My? $$$$
THIS IS THE FAIREST MOST HONEST WAY I KNOW TO SHARE THE WEALTH! Hello! (Save this file now...it will save you some time typing later if you decide to try this)
Would you like to make thousands of dollars, quick, legally, with NO CATCH? Then keep reading....please take five minutes to read this article it will change your life, just like it did mine. It's true!

You can make up to or over $50,000 dollars in 4-6 weeks, maybe sooner! I SWEAR I'M NOT LYING TO YOU, AND THIS IS NOT A SCAM! If you're intrested, keep reading; if you're not, I apologize for wasting your time.
Here we go. A little while back, I was browsing through these newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars in weeks with only an initial investment of $5! So, I thought, "Yeah, right, must be a scam", but I was curious, like most of us , so I kept reading. Anyway, it
said that you send $1 to each of the 5 names and addresses stated in the article. You then place your own name and address in the article at the bottom of the list at #5, and post the article in at least 200 newsgroups (there are thousands). No catch, that was it!
So after thinking it over, talking to a few people first, I tried it. I figured what have I got to lose except for 5 stamps and $5, right? Well, guess what...within 7 days, I started getting money in the mail! I was shocked! I still figured it would end soon, and didn't give it another thought. But then money kept coming IN, tripling in size and multiplying by 10-20 times the amount that I got the first week! In my first week I made about 20 to 30 dollars. But by the end of the second week, I had made a total of over $1,000!!!! In the third week, I had over $10,000 dollars, and it's still growing. This is my fourth week (Oct 11) and I've made about $42,000 TOTAL, and the money is still coming in.....
Let me tell you how this works and most importantly, WHY it works...also, make sure you print a copy of the article NOW, so you get the information off of it, and begin making money.

The process is very simple, and it consists of 3 EASY steps:

STEP 1: Get 5 seperate pieces of paper and write the following on each sheet of paper..."PLEASE PUT ME ON YOUR MAILING LIST. YOU ARE NUMBER 5." (etc. to number 1) Get five $1 bills and place ONE inside each piece of paper that
you just wrote on, and fold each piece of paper so the bill will not be seen in the envelope (otherwise, nosey people who like to steal envelopes with money in it will get yours). Put one paper inside the envelope and seal it. Do the same for all 5. You should now have 5 envelopes sealed, EACH have a piece of paper AND a $1 bill stuffed inside of the paper. Make sure those words that were stated above are stated on each paper. What you are doing is creating a service by this, this is PERFECTLY LEGAL. Now then, mail the 5 envelopes with the paper and $1 in each to the following 5 addresses:

1. P.DEBOUZY, 9 rue des Lavandieres, 78530 BUC, FRANCE.
2. J. MAHON, 750 Highland Dr. Apt. #210, Ojai, Calif. 930234.
3. P. Rae, 209 Oak Butte CT., Folsom. California. 95630. USA5.
4. M. Rapp, 801 Mockingbird Ct., Hinesville, GA 31313 USA
5. J. Rhodes, 5011 Stoneview Dr., Charlestown, IN 47111

STEP 2: Now take the #1 name off the list that you see above, move the other 4 names up (5 becoming 4, 4 becoming 3, ect.) and put YOUR NAME as number 5 on the list. You can slightly alter this article if you need to, editing what you need to edit.

STEP 3: Post your amended article (with your name at #5) to at least 200 news groups (I think there are close to 18,000 of them). All you need is say, at least 200. HOW TO DO THIS: If you have Netscape 3.0 do EXACTLY the following:

1) Click on any news group like normal, THEN click on 'TO NEWS', which is on the far left when you're in the newsgroups page. This will bring up a box to type a message in.

2) Leave the newsgroup box like it is, CHANGE the subject box to something flashy, like, "NEED CASH $$$ READ HERE $$$" or "FAST CASH"!!!

3) Tab once and you should be ready to type. Now, retype (only once) THIS whole article WORD FOR WORD, except to insert your name at #5, and to remove #1 off the list, plus any other small changes you think you need to make. Keep almost all of it the SAME!

4) When you're done typing the WHOLE article, click on FILE in THIS BOX, RIGHT ABOUVE SEND, NOT WHERE IT SAYS NETSCAPE NEWS ON THE FIRST BOX. Click on SAVE AS when you're under FILE. Save you artcle as a text file to your C: or A: drive. DO NOT SEND OR POST YOUR ARTICLE UNTIL YOU DO THIS. Once saved, move on to number 5 below.

5) If you still have all of your text, send or post to this newsgroup now by just clicking send, which is right below FILE, and right above Cc: .

6)Here's where you're going to post all 200. OK, click on any news group then click on 'TO NEWS', again in the top left corner. Leave the NEWSGROUPS BOX alone again, put a flashy subject title in the SUBJECT BOX, hit TAB once you're in the body of the message, and then click on ATTACHMENTS, which is below the SUBJECT BOX. You will get another box to come up. Click on ATTACH FILE, then find YOUR file that you saved; click once on the file, and then click OPEN' now click on OK; if you did this right, you should see your file name in the attachments box, and it will be shaded green.

IF YOU USE IE EXPLORER IT'S JUST AS EASY...HOLDING DOWN THE LEFT MOUSE BUTTON, HIGHLIGHT THIS ARTICLE. THEN PRESS THE "CRTL" KEY AND THE "C" KEY AT THE SAME TIME TO COPY THIS ARTICLE. THEN PRINT THIS ARTICLE FOR YOUR RECORDS TO HAVE THE NAMES OF THOSE YOU WILL BE SENDING $1 BILLS TO. NEXT GO TO THE NEWS GROUPS AND PRESS "POST AN ARTICLE" A WINDOW WILL OPEN. TYPE IN YOUR HEADLINE IN THE SUBJECT AREA AND THEN CLICK IN THE LARGE WINDOW BELOW. PRESS "CRTL" AND THEN "V" AND THE ARTICLE WILL BE PLACED IN THE WINDOW. IF YOU WANT TO EDIT THE ARTICLE, DO SO AND THEN HIGHLIGHT AND COPY IT AGAIN. NOW EVERYTIME YOU POST THE ARTICLE

IN
A NEW NEWSGROUP ALL YOU HAVE TO REPEAT "CTRL" AND "V" AND PRESS POST.

7)That's it. Each time you do this, all you have to do is type in a different newsgroup, so that way, it posts to 200 DIFFERENT newsgroups, you see? Now you just have 199 to go!! (Don't worry, each one takes about 30 seconds, once you get used to it) REMEMBER 200 IS THE MINIMUM. The more you post the more money you will make.

AND THAT'S IT!!! THAT'S THE ONLY 3 STEPS THERE IS!!!

You are now in the mail order business and will start recieving your $1 envelopes from various people all over the world within days. HINT THE MORE NEWSGROUPS YOU POST TO, THE MORE MONEY YOU WILL MAKE. You may want to rent a PO Box eventually because of all the mail. If you wish to stay anonymous, you can come up with a name, such as "manager" or "investor". Just make sure all the addresses are CORRECT, please.

LET ME TELL YOU WHY THIS SYSTEM WORK!!!!

Out of every 200 postings, let's say I ONLY recieve 5 replies, which is actually VERY LOW. So I made 5 dollars with my name at #5. Now then, each person who just sent me $1 makes, say only 200 postings, now with your name at number 4, WHICH IS A TOTAL OF 1000 POSTINGS, not including yours too. 50 people send you $1 now; thats $50 you just made! Now, then your new 50 agents post 200 each with YOUR NAME AT NUMBER 3, OR 10,000 POSTING (50x200). Average return is 500 at $1 each is $500. They make 200 postings, which is 5,000 returns at $1 each, which is $5000 dollars! And finally, 5000 people make 200 postings wach with YOUR NAME AT NUMBER 1. YOU NOW GET A RETURN OF $50,000 BEFORE YOUR NAME DROPS OFF THE LIST. AND THAT'S IF EVERYONE MAKES 200 POSTINGS ONLY, AND IF ONLY 5 PERSONS RESPOND!!!!!
When your name is no longer on the list, you just take the latest posting that is appearing in the newsgroups, and SEND OUT ANOTHER $5 TO THE NAMES ON THE LIST, PUTTING YOUR NAME AT 5 AGAIN. And start posting again. The thing to remember is, do you realize that THOUSANDS OF PEOPLE ALL OVER THE WORLD ARE JOINING THE INTERNET AND READING THESE ARTICLES EVERY DAY, JUST LIKE YOU ARE RIGHT NOW!!! So can afford $5 dollars and see if it really works? I think so.....
People have said, "What if the plan is played out and no one sends you
the money?" So what! What are the chances of that happening when there are TONS OF NEW HONEST USERS AND NEW HONEST PEOPLE who are joining the Internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with THOUSANDS of those joing the actual Internet. Remember, play FAIRLY and HONESTLY and this WILL WORK, I PROMISE YOU!!! You just have to be honest. Make sure you print this article out RIGHT NOW, also, try to keep a list of everyone that sends you money and always keep an eye on the mnewsgroups to make sure everyone is playing fairly. REMEMBER, HONESTY IS THE BEST POLICY. YOU DON'T NEED TO CHEAT THE BASIC IDEA TO MAKE MONEY!! GOOD LUCK TO ALL AND PLEASE PLAY FAIRLY AND YOU WILL REAP THE HUGE REWARDS FROM THIS, WHICH IS TONS OF EXTRA CASH!!!
**By the way, if you try to decieve people by posting the

messages with
your name on the list and not sending the money to the people already

on
the list, you will not get much. Someone I talKed to knew someone who
did that and he only made $150 dollars, and that's AFTER seven or eight
weeks! Then he sent the 5 $1 bills, people added him to their lists,
and in 4-5 weeks, he had over $10K.
THIS IS THE FAIREST AND MOST HONEST WAY I HAVE EVER SEEN TO SHARE THE
WEALTH OF THE WORLD WITHOUT COSTING ANYTHING BUT OUR TIME!!!

Hi,
I am interested in getting a new radio for P3D. The 736 seems to be the
historical favorite but there are new radios from Kenwood and Icom. Has
anyone compared the features or performance? Do the Kenwood or Icom
radios have the same special satellite oriented features that the Yaesu
736 has? If you were going to buy one which one would you choose and
why?

I am planning to operate on 1.2 GHz in addition to 2 and 440.

I would also be interested to know what you would recommend for 2.3 GHz.

Thanks very much for you advice in advance.

Hi just a quick note-- the Two meter antenna was broken on the first
EVA and they did a second EVA today and did a makeshift repair which
will work, but the signal will not be as strong or as steady as
before.. but it will work for the time being, they will fix the coax
and on the next planned EVA make the proper repair.. I have no idea
when that will be.. 73 DAVE N1PPP

From: kwalker@qb.island.net (Ken Walker)
Subject: PacSat for Offshore Sailing

I have not followed the development of the packet capable amateur satellites
but I believe there are some in operation. As a sometimes off shore sailor
and a radio amateur, I am asked by fellow sailors whether they should get a
ham licence and how effective it would be. I tell them about 20m ssb, about
hf packet and amtor but I also go on about how low earth store and forward
packet satellites will be available one day. But maybe they are now?

The ideal packet system for offshore use would allow the offshore sailing ham
to prepare a packet message and the software would determine when a bird is
overhead and send up the message and pick up any waiting mail. Are these
birds ready to do this? Is there software that would do it? Am I right that
these can be worked with small omni antennas?

I think they require dual band operation? Which bands? Hopefully they are
bands that can be worked with readily available dual band mobile rigs?

I have thought about this from time to time but I am not up to date on what is
available. Anyone want to try to update me??

Thanks.

I've used a IC251A with 10 watts into a Jpole, and a beat-up Undien 2510
fed with a 100 foot long dipole. No problem working ssb or CW on RS-10,
CW only on RS15.

When I added a Hamtronics downconverter for 70cm, I could work FO-20
quite often as well.

Kurt, when I wrote my routines for FT736R CAT (published on this
BBS) I discovered that Yaesu did a great job and introduced only 2
bugs.

One was that if the radio is in (say) 2m RX /70cm TX, then the CAT cannot
change it to 70cm RX /2m TX! This is because you have to make the
changes in two stages, e.g. 2/70 -> 2/2 -> 70/2.

Obviously the middle step is inadmissable. If your radio has a third
module (e.g.
23cm), then you can go 2/70 -> 23/70 -> 23/2 -> 70/2.

The other bug concerns reading the s-meter and squelch. This
sometimes misses the last byte.

So your problem is not a fault of the tracker-box code.

Subject: Mir's EVA

from Chris Van deBerg
MIRNEWS 10 DECEMBER 1996 (338)

2d Spacewalk (EVA) 22d Mainexpedition (ME) MIR:

This EVA took place on 9.12.1996 between 1352UTC (opening
hatch) and 2028UTC (closing hatch). So a duration of 6
hrs 36 mins. The EVA lasted longer for Korzun wished to
accomplish all what had to be done and there also was a
problem with something which bungled loose. Before
return they restored the connection of the radio-
amateurantenne for the 145 mc. Probably this antenne had
been disconnected by accident during the 1st EVA. They

connected the antenna again and while they were flying
over Chile and Brasil they asked John Blaha to listen
out on the 145.800 mc to check whether the antenne was
working or not. There was no traffic on that frequency
in that area and so they had to wait until they came in
range of European amateurs. I asked the English radio-
amateur Pat Gowen (G3IOR) to give calls on 145.800 mc as
soon as MIR would come in range (at abt. 1934UTC). So he
did and these signals could be heard by John Blaha while
MIR was flying over France. He reported this to the
still being on EVA Korzun and Kaleri and congratulated
them with their success. Korzun urged John not to
transmit, but to listen only. The cosmonauts fully
accomplished their tasks: installing the truss
construction Rapana at the truss Ferma-3 and the
replacement of the Kurs-antenna on the outersurface of
the P.Kh.O. (transitionsection). John Blaha who stayed
inside the complex took care of the communications and
executed commands given to him by TsUP. He gave the
cosmonauts all possible moral and technical help. The
cosmonauts and Blaha did an excellent job during this
EVA, they gave an example of fruitful international
cooperation and so they all deserve a loud: 'MOLODTSY'
(very well done).
Of course the cosmonauts were very tired after the EVA
and back in the airlock they had to do hard labour to
put off their spacesuits.
Just before midnight Korzun could be heard in a contact
with a Portugese radio-amateur via the repaired antenne
for the 145 mc.

Thusfar there are no more EVA's on schedule for this
crew.
I hope this fills in the gaps, it was working much better tonight,
they must have found something else..

I believe the local cable company (TCI) here in the Clear Lake area of
Houston (near Johnson Space Center) carries NASA TV (NASA Select is a
non-term....). It's been years since I was a subscriber, but back then,
they were just carrying it during missions. I have heard they are carrying
it 24 hours a day, now. But, I don't know that firsthand. I believe a lot
of people asked the cable company for it and TCI (then Storer Cable)
accomodated.

I suppose the same could happen with the DSS groups. Also, with local cable companies, if enough of their subscribers request it. Having a few school administrations backing the request might help, too.

Press for mission and non-mission airing of NASA TV. Might as well go all the way. Maybe it can be compromised down to mission coverage.

Good luck,

From: Rod Adkins <rod@mail.border.com>
Subject: RS-10 /RS-15 what are you using?

I am using up to 100w SSB with a J-pole ant for the uplink, & this is plenty for RS-10, but not good enough for RS-15 (steerable beam in progress).

I use a horizontal loop at about 25ft for 10m receive, & this works well for on RS-10, only ok for RS-15 on near-overhead passes. I find vertical antennas too noisy.

Methinks a "C" band dish setup is required. I don't think the digital
guys like Dish, USSB, Primestar, etc. are carrying NASA TV. For the
"bird" and transponder, check a copy of Satellite Times.

From: Herb Perkins <wa2jrv@amsat.org>
Subject: PacSat for Offshore Sailing

Ken,

I may not be of much help but I have assisted W4AVO (George) put his
station together. He is a live aboard and blue water sailor. Last year
he was in the Bahamas and will be there again this year. He has been on
UO22 and has used his station very succesfully. AF4N Wes and I have both
put in a good bit of time getting his boat ready (all three of us are
sailors). George just went off internet and will be on the air for the
next six months. Wes and I will be on internet and can offer some
suggestions.

The first point is that it is not difficult and even underway the system
works just fine. However antenna placement is a problem. George uses one
J pole for up link and a small yagi for down link (3 elements). He
rotates it 180 degrees during the pass and has no difficulity going from
the radio to the cockpit to make the change. Since UO22 is basically
automated his computer does all the work.

He uses a 386 that is not fast and is just a work horse.

If I can be of help please contact me.

1. I have about 100ft of feedline
2. I know the J-pole is not properly tuned yet (it's igloo-time up here)
3. I am surrounded by apartment buildings
4. In my experience, & in my situation, low power & omni-antennas work only when the satellite is on a near-overhead pass, and the satellite is not busy. I have almost given up working weekends, due to being stomped on.
5. If you want to work passes other than overhead, then because of the path loss, there is no choice but to increase power &/or antenna gain.
6. I was trying to give this guy the confidence that with his TX set-up he darn well ought to be able to make contacts.

You would need a c band satellite dish and receiver. I would think a 7 foot
would be about the minimum to get great video. you might be able to get by
with a 6 foot if you live near the center of the U.S.

The satellite is over to the east - 69 degrees west or so.

The good news is that you can scrounge together a system pretty cheaply. Lots
of people have old ones they aren't using anymore. You'd need a few bags of
cement and a pole, some cable to run into the house. If you only want it for
the one channel, this would be really easy and cheap to do.

I think it's going to move to a stronger satellite in the central arc
sometime
fairly soon. The good news is the signal would be stronger. The bad news is

that the new satellite would have others sats nearby, meaning the smaller
your
dish the greater the crosstalk. If you live on the west coast, it may be kind
of low on the horizon in it's present location. Let me know where you live
and
I'll see if I can give you the particulars. Email me....

Subject: NoNo?:TrakBox, Ft736R and 23cm(P3D)

Hi All
after long nights with my TrakBox version 3.3h , I came to the
conclusion, that TrakBox designers had never in mind to let it
work on 23 cm with the Ft736R. ___Am I right ????___
The case: I'm a newcomer in the satellite operators community and
I'm trying to prepare my rig for Phase 3D in spring 1997.
So I tried to program satellites with 23cm RX or TX channels. But this
failed. My FT736R did not switch to 1296. Mhz, neither on RX nor TX.
The Ft736R is ok, because CAT programming directly via PC works.
I analysed the CAT commands from TrakBox to FT736R and found the
following hex command sequences for a 70cm/23cm satellite example:
0,0,0,0,0,
C9,60,0,0,1E, This is a dummy switching to 1296Mhz done in the
0,0,0,0,80, Oct. 18 '92 update for TrakBox version 2.05
0,0,0,0,0,
43,21,0,0,2E, This is the Sat. TX Frequency __is ok__.
0,0,0,0,80,
0,0,0,0,0,
8,0,0,0,27, This is TX Mode
8,0,0,0,17, This is RX Mode
0,0,0,0,80,
0,0,0,0,0,
12,96,34,49,1E, And here is the problem: My assumed RX frequency
0,0,0,0,80, 1296.34491 Mhz is not properly set. It should be:
C9,63,44,91 and not 12,96,....., and the dummy
above should be set to 144Mhz
Any help??
Thanks and sorry for this long message.
73, Guenter, DK7KV

Subject: Best Ant for RS-10 Down Link

Brad,

I use a sloping dipole on 10 m to receive RS-10. It always has a very
strong signal here. I added a Hamtronics pre-amp recently and it does
boost the signal a few S units and also provides a bit of selectivity to
reject out-of-band signals.

For uplink I have used a 1/4 wave vertical and about 80 Watts. I only
tried CW since the amp was not linear, but I got very good reports.

RS-10 could use some activity, so go ahead. Hope to wrk u there.

From: karen@ra3apw.ampr.demos.su (Karen Tadewosyan)
Subject: FT290/790 9600 Bd mods?

Bob,

this is info about 9600 bps mods for FT290/790 from my acrhive.
I used it some time ago and it run well.
I hope it will be usefull for you.

MODEM @WW de:DL6DBN 23.09.90 07:50 0 1568 Bytes
FT290/790RII mods. PSK/9k6
*** Bulletin-ID: 229008DB0SGL ***

900922/0911z DK0MWX, 900922/0714z DB0SGL
de DL6DBN @ DB0SGL

How to modify YAESU FT-290 RII and FT-790RII
for 1200 BpS PSK and 9600 BpS FSK

As you know, for 1200 BpS PSK/FM a direct injektion of the signal into the
FM-varicap is recommended and for 9600 BpS FSK necessary. For 9600 BpS you
will need the FM-discriminator output.

Due to SM-Technology the following modifications are not easy to manage.
FT-790RII in ()

The FM-discriminator output is at pin 9 of Q4001 (Q402) MC3357P. Use a
shielded cable to connect this pin with your 9k6-modem input. The IF-
bandwidth of CF01 (CF01) CFW455F seems to be to small for very good
results, so I recommend to exchange it with a CFW455D. With good RF-
strength and proper tuning the CFW455F can fit as well.

The more complicate modification is the injection point. Inject your TX-
signal below the main unit where R30124, C30120 and C30126 (R30117, C30117

and C30124) come together (all SMD). Is it necessary to say, use a shielded cable? As long as no other AF from the tone unit or the microphon reaches this point you must not cut any connections. But adjust your FM-deviation.

I made this changes in both radio sets and had already good contacts via UoSAT-OSCAR 14. So good luck and success.

From: "Roger E. Koss" <kossr@edl1.ksc.nasa.gov>
Subject: Best Ant for RS-10 Down Link

Brad:
I'm using a dipole cut for 10 meters, up only about 15 feet, and it
works just fine into a Uniden HR2600. For my uplink, I have a 5/8 wave
homebrew groundplane up 30', which I feed with 25 watts from a Yaesu
FT-290R Mk II. RS-10 has a very sensitive receiver and an excellent
transmitter. Much more than this would be overkill. Hope to work you on
the birds someday.

From: ashleyb@ohsu.edu
Subject: Best Ant for RS-10 Down Link

To The Group:

I'm in the process of setting up a satelite system. A few local guys
are having fun with RS-10. What I would like to do is to set up a nice
beginners station. I currently have a IC-275A with a GP-3 for the Up link
and two different HF xcvr's to set up the down link. My question is would
an HF vertical like the Ringo ranger AR-10 work or maybe an inverted V
dipole. I am reading the ARRL satelite handbook but I'd like to hear from
some people actually working the birds. Also should I get a pre-amp and if
so does anyone have any recommendations ie buy,build?? Thanks for your
help.

RS-10 has a very strong downlink for an amatuer satellite. I put up a
Ringo, but can honestly say that it didn't offer any better performance
than a simple dipole.

Try orienting the dipole for best north/south reception. Don't worry about a pre-amp. I used a Radio Shack 10m rig to listen to my downlinks.

From: wa4twa@versoft.com
Subject: Cu-Seeme Video conferencing

Does anyone know of anyone using Video Conferencing on computer/internet in conjunction with amateur redio? I have been in contact with hundreds of people from around the world on Cu-Seeme and have run into only one ham. Is there a freq. HF or VHF where hams may hang out that use both modes..computer and radio. I believe this would be a natural progression from Slow Scan. We now can SEE the people we are in QSO with.

If you are interested in setting up a sched. and have Video COnferencing capabilities or are just interested drop me an e-mail,

73's
Charlie

Subject: free money

Oh! My? $$$$
THIS IS THE FAIREST MOST HONEST WAY I KNOW TO SHARE THE WEALTH! Hello! (Save this file now...it will save you some time typing later if you decide to try this)
Would you like to make thousands of dollars, quick, legally, with NO CATCH? Then keep reading....please take five minutes to read this article it will change your life, just like it did mine. It's true! You can make up to or over $50,000 dollars in 4-6 weeks, maybe sooner! I SWEAR I'M NOT LYING TO YOU, AND THIS IS NOT A SCAM! If you're intrested, keep reading; if you're not, I apologize for wasting your time.
Here we go. A little while back, I was browsing through these newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars in weeks with only an initial investment of $5! So, I thought, "Yeah, right, must be a scam", but I was curious, like most of us , so I kept reading. Anyway, it
said that you send $1 to each of the 5 names and addresses stated in the article. You then place your own name and address in the article at the bottom of the list at #5, and post the article in at least 200

newsgroups (there are thousands). No catch, that was it!
So after thinking it over, talking to a few people first, I tried it.
I figured what have I got to lose except for 5 stamps and $5, right?
Well, guess what...within 7 days, I started getting money in the mail!
I was shocked! I still figured it would end soon, and didn't give it
another thought. But then money kept coming IN, tripling in size and
multiplying by 10-20 times the amount that I got the first week! In my
first week I made about 20 to 30 dollars. But by the end of the second
week, I had made a total of over $1,000!!!! In the third week, I had
over $10,000 dollars, and it's still growing. This is my fourth week
(Oct 11) and I've made about $42,000 TOTAL, and the money is still
coming in.....
Let me tell you how this works and most importantly, WHY it
works...also, make sure you print a copy of the article NOW, so you get
the information off of it, and begin making money.

The process is very simple, and it consists of 3 EASY steps:

STEP 1: Get 5 seperate pieces of paper and write the following on each
sheet of paper..."PLEASE PUT ME ON YOUR MAILING LIST. YOU ARE NUMBER
5." (etc. to number 1) Get five $1 bills and place ONE inside each piece
of paper that
you just wrote on, and fold each piece of paper so the bill will not be
seen in the envelope (otherwise, nosey people who like to steal envelopes
with money in it will get yours). Put one paper inside the envelope
and seal it. Do the same for all 5. You should now have 5 envelopes
sealed, EACH have a piece of paper AND a $1 bill stuffed inside of the
paper. Make sure those words that were stated above are stated on each
paper. What you are doing is creating a service by this, this is
PERFECTLY LEGAL. Now then, mail the 5 envelopes with the paper and $1
in each to the following 5 addresses:

1. P.DEBOUZY, 9 rue des Lavandieres, 78530 BUC, FRANCE.
2. J. MAHON, 750 Highland Dr. Apt. #210, Ojai, Calif. 930234.
3. P. Rae, 209 Oak Butte CT., Folsom. California. 95630. USA5.
4. M. Rapp, 801 Mockingbird Ct., Hinesville, GA 31313 USA
5. J. Rhodes, 5011 Stoneview Dr., Charlestown, IN 47111

STEP 2: Now take the #1 name off the list that you see above, move the
other 4 names up (5 becoming 4, 4 becoming 3, ect.) and put YOUR NAME
as number 5 on the list. You can slightly alter this article if you need
to, editing what you need to edit.

STEP 3: Post your amended article (with your name at #5) to at least
200 news groups (I think there are close to 18,000 of them). All you
need is say, at least 200. HOW TO DO THIS: If you have Netscape 3.0
do EXACTLY the following:

1) Click on any news group like normal, THEN click on 'TO NEWS', which
is on the far left when you're in the newsgroups page. This will bring
up a box to type a message in.

2) Leave the newsgroup box like it is, CHANGE the subject box to something flashy, like, "NEED CASH $$$ READ HERE $$$" or "FAST CASH"!!!

3) Tab once and you should be ready to type. Now, retype (only once) THIS whole article WORD FOR WORD, except to insert your name at #5, and to remove #1 off the list, plus any other small changes you think you need to make. Keep almost all of it the SAME!

4) When you're done typing the WHOLE article, click on FILE in THIS BOX, RIGHT ABOUVE SEND, NOT WHERE IT SAYS NETSCAPE NEWS ON THE FIRST BOX. Click on SAVE AS when you're under FILE. Save you artcle as a text file to your C: or A: drive. DO NOT SEND OR POST YOUR ARTICLE UNTIL YOU DO THIS. Once saved, move on to number 5 below.

5) If you still have all of your text, send or post to this newsgroup now by just clicking send, which is right below FILE, and right above Cc: .

6)Here's where you're going to post all 200. OK, click on any news group then click on 'TO NEWS', again in the top left corner. Leave the NEWSGROUPS BOX alone again, put a flashy subject title in the SUBJECT BOX, hit TAB once you're in the body of the message, and then click on ATTACHMENTS, which is below the SUBJECT BOX. You will get another box to come up. Click on ATTACH FILE, then find YOUR file that you saved; click once on the file, and then click OPEN' now click on OK; if you did this right, you should see your file name in the attachments box, and it will be shaded green.

IF YOU USE IE EXPLORER IT'S JUST AS EASY...HOLDING DOWN THE LEFT MOUSE BUTTON, HIGHLIGHT THIS ARTICLE. THEN PRESS THE "CRTL" KEY AND THE "C" KEY AT THE SAME TIME TO COPY THIS ARTICLE. THEN PRINT THIS ARTICLE FOR YOUR RECORDS TO HAVE THE NAMES OF THOSE YOU WILL BE SENDING $1 BILLS TO. NEXT GO TO THE NEWS GROUPS AND PRESS "POST AN ARTICLE" A WINDOW WILL OPEN. TYPE IN YOUR HEADLINE IN THE SUBJECT AREA AND THEN CLICK IN THE LARGE WINDOW BELOW. PRESS "CRTL" AND THEN "V" AND THE ARTICLE WILL BE PLACED IN THE WINDOW. IF YOU WANT TO EDIT THE ARTICLE, DO SO AND THEN HIGHLIGHT AND COPY IT AGAIN. NOW EVERYTIME YOU POST THE ARTICLE

IN
A NEW NEWSGROUP ALL YOU HAVE TO REPEAT "CTRL" AND "V" AND PRESS POST.

7)That's it. Each time you do this, all you have to do is type in a different newsgroup, so that way, it posts to 200 DIFFERENT newsgroups, you see? Now you just have 199 to go!! (Don't worry, each one takes about 30 seconds, once you get used to it) REMEMBER 200 IS THE MINIMUM. The more you post the more money you will make.

AND THAT'S IT!!! THAT'S THE ONLY 3 STEPS THERE IS!!!

You are now in the mail order business and will start recieving your $1 envelopes from various people all over the world within days. HINT THE MORE NEWSGROUPS YOU POST TO, THE MORE MONEY YOU WILL MAKE. You may want to rent a PO Box eventually because of all the mail. If you wish to stay anonymous, you can come up with a name, such as "manager" or

"investor". Just make sure all the addresses are CORRECT, please.

LET ME TELL YOU WHY THIS SYSTEM WORK!!!!

Out of every 200 postings, let's say I ONLY recieve 5 replies, which is actually VERY LOW. So I made 5 dollars with my name at #5. Now then, each person who just sent me $1 makes, say only 200 postings, now with your name at number 4, WHICH IS A TOTAL OF 1000 POSTINGS, not including yours too. 50 people send you $1 now; thats $50 you just made! Now, then your new 50 agents post 200 each with YOUR NAME AT NUMBER 3, OR 10,000 POSTING (50x200). Average return is 500 at $1 each is $500. They make 200 postings, which is 5,000 returns at $1 each, which is $5000 dollars! And finally, 5000 people make 200 postings wach with YOUR NAME AT NUMBER 1. YOU NOW GET A RETURN OF $50,000 BEFORE YOUR NAME DROPS OFF THE LIST. AND THAT'S IF EVERYONE MAKES 200 POSTINGS ONLY, AND IF ONLY 5 PERSONS RESPOND!!!!!
When your name is no longer on the list, you just take the latest posting that is appearing in the newsgroups, and SEND OUT ANOTHER $5 TO THE NAMES ON THE LIST, PUTTING YOUR NAME AT 5 AGAIN. And start posting again. The thing to remember is, do you realize that THOUSANDS OF PEOPLE ALL OVER THE WORLD ARE JOINING THE INTERNET AND READING THESE ARTICLES EVERY DAY, JUST LIKE YOU ARE RIGHT NOW!!! So can afford $5 dollars and see if it really works? I think so.....
People have said, "What if the plan is played out and no one
sends you
the money?" So what! What are the chances of that happening when there are TONS OF NEW HONEST USERS AND NEW HONEST PEOPLE who are joining the Internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with THOUSANDS of those joing the actual Internet. Remember, play FAIRLY and HONESTLY and this WILL WORK, I PROMISE YOU!!! You just have to be honest. Make sure you print this article out RIGHT NOW, also, try to keep a list of everyone that sends you money and always keep an eye on the mnewsgroups to make sure everyone is playing fairly. REMEMBER, HONESTY IS THE BEST POLICY. YOU DON'T NEED TO CHEAT THE BASIC IDEA TO MAKE MONEY!! GOOD LUCK TO ALL AND PLEASE PLAY FAIRLY AND YOU WILL REAP THE HUGE REWARDS FROM THIS, WHICH IS TONS OF EXTRA CASH!!!
**By the way, if you try to decieve people by posting the

messages with
your name on the list and not sending the money to the people already

on
the list, you will not get much. Someone I talKed to knew someone who did that and he only made $150 dollars, and that's AFTER seven or eight weeks! Then he sent the 5 $1 bills, people added him to their lists, and in 4-5 weeks, he had over $10K.
THIS IS THE FAIREST AND MOST HONEST WAY I HAVE EVER SEEN TO SHARE THE WEALTH OF THE WORLD WITHOUT COSTING ANYTHING BUT OUR TIME!!!

Hi,
I am interested in getting a new radio for P3D. The 736 seems to be the
historical favorite but there are new radios from Kenwood and Icom. Has
anyone compared the features or performance? Do the Kenwood or Icom
radios have the same special satellite oriented features that the Yaesu
736 has? If you were going to buy one which one would you choose and
why?

I am planning to operate on 1.2 GHz in addition to 2 and 440.

I would also be interested to know what you would recommend for 2.3 GHz.

Thanks very much for you advice in advance.

Subject: Mir back on packet

Hi just a quick note-- the Two meter antenna was broken on the first
EVA and they did a second EVA today and did a makeshift repair which
will work, but the signal will not be as strong or as steady as
before.. but it will work for the time being, they will fix the coax
and on the next planned EVA make the proper repair.. I have no idea
when that will be.. 73 DAVE N1PPP

Can anyone give me the low down on what is required in order to receive
live NASA TV. I don't know much about this, but would like to learn. I
would like to be able to receive NASA live TV during the shuttle
flights. What would I need in order to do this?

I receive live NASA video and have rebroadcast the audio in the past.
All that is required is a BUD (Big Ugly Dish) for C-band tvro, and point
it at satellite S-2, transponder 09.

What's the chance of getting DirecTV or USSB to carry NASA Select if we all wrote or called? Anyone have any inside info on these DSS providers?

From: kwalker@qb.island.net (Ken Walker)
Subject: PacSat for Offshore Sailing

I have not followed the development of the packet capable amateur satellites
but I believe there are some in operation. As a sometimes off shore sailor
and a radio amateur, I am asked by fellow sailors whether they should get a
ham licence and how effective it would be. I tell them about 20m ssb, about
hf packet and amtor but I also go on about how low earth store and forward
packet satellites will be available one day. But maybe they are now?

The ideal packet system for offshore use would allow the offshore sailing ham
to prepare a packet message and the software would determine when a bird is
overhead and send up the message and pick up any waiting mail. Are these
birds ready to do this? Is there software that would do it? Am I right that
these can be worked with small omni antennas?

I think they require dual band operation? Which bands? Hopefully they are
bands that can be worked with readily available dual band mobile rigs?

I have thought about this from time to time but I am not up to date on what is
available. Anyone want to try to update me??

Thanks.

I've used a IC251A with 10 watts into a Jpole, and a beat-up Undien 2510
fed with a 100 foot long dipole. No problem working ssb or CW on RS-10,
CW only on RS15.

When I added a Hamtronics downconverter for 70cm, I could work FO-20
quite often as well.

```

Kurt, when I wrote my routines for FT736R CAT (published on this
BBS) I discovered that Yaesu did a great job and introduced only 2
bugs.

One was that if the radio is in (say) 2m RX /70cm TX, then the CAT cannot
change it to 70cm RX /2m TX! This is because you have to make the
changes in two stages, e.g. 2/70 -> 2/2 -> 70/2.

Obviously the middle step is inadmissable. If your radio has a third
module (e.g.
23cm), then you can go 2/70 -> 23/70 -> 23/2 -> 70/2.

The other bug concerns reading the s-meter and squelch. This
sometimes misses the last byte.

So your problem is not a fault of the tracker-box code.

From: dhend@cyberportal.net (Dave Hendrick)
Subject: Mir's EVA

from Chris Van deBerg
MIRNEWS 10 DECEMBER 1996 (338)

2d Spacewalk (EVA) 22d Mainexpedition (ME) MIR:

This EVA took place on 9.12.1996 between 1352UTC (opening
hatch) and 2028UTC (closing hatch). So a duration of 6
hrs 36 mins. The EVA lasted longer for Korzun wished to
accomplish all what had to be done and there also was a
problem with something which bungled loose. Before
return they restored the connection of the radio-
amateurantenne for the 145 mc. Probably this antenne had
been disconnected by accident during the 1st EVA. They
connected the antenna again and while they were flying
over Chile and Brasil they asked John Blaha to listen
out on the 145.800 mc to check whether the antenne was
working or not. There was no traffic on that frequency
in that area and so they had to wait until they came in
range of European amateurs. I asked the English radio-
amateur Pat Gowen (G3IOR) to give calls on 145.800 mc as
soon as MIR would come in range (at abt. 1934UTC). So he
did and these signals could be heard by John Blaha while
MIR was flying over France. He reported this to the

still being on EVA Korzun and Kaleri and congratulated
them with their success. Korzun urged John not to
transmit, but to listen only. The cosmonauts fully
accomplished their tasks: installing the truss
construction Rapana at the truss Ferma-3 and the
replacement of the Kurs-antenna on the outersurface of
the P.Kh.O. (transitionsection). John Blaha who stayed
inside the complex took care of the communications and
executed commands given to him by TsUP. He gave the
cosmonauts all possible moral and technical help. The
cosmonauts and Blaha did an excellent job during this
EVA, they gave an example of fruitful international
cooperation and so they all deserve a loud: 'MOLODTSY'
(very well done).
Of course the cosmonauts were very tired after the EVA
and back in the airlock they had to do hard labour to
put off their spacesuits.
Just before midnight Korzun could be heard in a contact
with a Portugese radio-amateur via the repaired antenne
for the 145 mc.

Thusfar there are no more EVA's on schedule for this
crew.
I hope this fills in the gaps, it was working much better tonight,
they must have found something else..

I believe the local cable company (TCI) here in the Clear Lake area of
Houston (near Johnson Space Center) carries NASA TV (NASA Select is a
non-term....). It's been years since I was a subscriber, but back then,
they were just carrying it during missions. I have heard they are carrying
it 24 hours a day, now. But, I don't know that firsthand. I believe a lot
of people asked the cable company for it and TCI (then Storer Cable)
accomodated.

I suppose the same could happen with the DSS groups. Also, with local
cable companies, if enough of their subscribers request it. Having a few
school administrations backing the request might help, too.

Press for mission and non-mission airing of NASA TV. Might as well go all
the way. Maybe it can be compromised down to mission coverage.

Good luck,

From: Rod Adkins <rod@mail.border.com>
Subject: RS-10 /RS-15 what are you using?

I am using up to 100w SSB with a J-pole ant for the uplink, & this is
plenty for RS-10, but not good enough for RS-15 (steerable beam in
progress).

I use a horizontal loop at about 25ft for 10m receive, & this works well
for on RS-10, only ok for RS-15 on near-overhead passes. I find vertical
antennas too noisy.

Methinks a "C" band dish setup is required. I don't think the digital guys like Dish, USSB, Primestar, etc. are carrying NASA TV. For the "bird" and transponder, check a copy of Satellite Times.

Subject: PacSat for Offshore Sailing

Ken,

I may not be of much help but I have assisted W4AVO (George) put his station together. He is a live aboard and blue water sailor. Last year he was in the Bahamas and will be there again this year. He has been on UO22 and has used his station very succesfully. AF4N Wes and I have both put in a good bit of time getting his boat ready (all three of us are sailors). George just went off internet and will be on the air for the next six months. Wes and I will be on internet and can offer some suggestions.

The first point is that it is not difficult and even underway the system works just fine. However antenna placement is a problem. George uses one J pole for up link and a small yagi for down link (3 elements). He rotates it 180 degrees during the pass and has no difficulity going from the radio to the cockpit to make the change. Since UO22 is basically automated his computer does all the work.

He uses a 386 that is not fast and is just a work horse.

If I can be of help please contact me.

1. I have about 100ft of feedline
2. I know the J-pole is not properly tuned yet (it's igloo-time up here)
3. I am surrounded by apartment buildings
4. In my experience, & in my situation, low power & omni-antennas work only when the satellite is on a near-overhead pass, and the satellite is not busy. I have almost given up working weekends, due to being stomped on.
5. If you want to work passes other than overhead, then because of the path loss, there is no choice but to increase power &/or antenna gain.
6. I was trying to give this guy the confidence that with his TX set-up he darn well ought to be able to make contacts.

Subject: Best Ant for RS-10 Down Link

Brad:
I'm using a dipole cut for 10 meters, up only about 15 feet, and it
works just fine into a Uniden HR2600. For my uplink, I have a 5/8 wave
homebrew groundplane up 30', which I feed with 25 watts from a Yaesu
FT-290R Mk II. RS-10 has a very sensitive receiver and an excellent
transmitter. Much more than this would be overkill. Hope to work you on
the birds someday.

From: ashleyb@ohsu.edu
Subject: Best Ant for RS-10 Down Link

To The Group:

I'm in the process of setting up a satelite system. A few local guys are having fun with RS-10. What I would like to do is to set up a nice beginners station. I currently have a IC-275A with a GP-3 for the Up link and two different HF xcvr's to set up the down link. My question is would an HF vertical like the Ringo ranger AR-10 work or maybe an inverted V dipole. I am reading the ARRL satelite handbook but I'd like to hear from some people actually working the birds. Also should I get a pre-amp and if so does anyone have any recommendations ie buy,build?? Thanks for your help.

RS-10 has a very strong downlink for an amatuer satellite. I put up a Ringo, but can honestly say that it didn't offer any better performance than a simple dipole.

Try orienting the dipole for best north/south reception. Don't worry about a pre-amp. I used a Radio Shack 10m rig to listen to my downlinks.

Subject: free money

Oh! My? $$$$
THIS IS THE FAIREST MOST HONEST WAY I KNOW TO SHARE THE WEALTH! Hello!
(Save this file now...it will save you some time typing later if you
decide to try this)
Would you like to make thousands of dollars, quick, legally, with NO
CATCH? Then keep reading....please take five minutes to read this
article it will change your life, just like it did mine. It's true!
You can make up to or over $50,000 dollars in 4-6 weeks, maybe sooner!
I SWEAR I'M NOT LYING TO YOU, AND THIS IS NOT A SCAM! If you're
intrested, keep reading; if you're not, I apologize for wasting your
time.
Here we go. A little while back, I was browsing through these
newsgroups, just like you are now, and came across an article similar to
this that said you could make thousands of dollars in weeks with only
an initial investment of $5! So, I thought, "Yeah, right, must be a
scam", but I was curious, like most of us , so I kept reading. Anyway,
it
said that you send $1 to each of the 5 names and addresses stated in the
article. You then place your own name and address in the article at
the bottom of the list at #5, and post the article in at least 200
newsgroups (there are thousands). No catch, that was it!
So after thinking it over, talking to a few people first, I tried it.
I figured what have I got to lose except for 5 stamps and $5, right?
Well, guess what...within 7 days, I started getting money in the mail!
I was shocked! I still figured it would end soon, and didn't give it
another thought. But then money kept coming IN, tripling in size and
multiplying by 10-20 times the amount that I got the first week! In my
first week I made about 20 to 30 dollars. But by the end of the second
week, I had made a total of over $1,000!!!! In the third week, I had
over $10,000 dollars, and it's still growing. This is my fourth week
(Oct 11) and I've made about $42,000 TOTAL, and the money is still
coming in.....
Let me tell you how this works and most importantly, WHY it
works...also, make sure you print a copy of the article NOW, so you get
the information off of it, and begin making money.

The process is very simple, and it consists of 3 EASY steps:

STEP 1: Get 5 seperate pieces of paper and write the following on each sheet of paper..."PLEASE PUT ME ON YOUR MAILING LIST. YOU ARE NUMBER 5." (etc. to number 1) Get five $1 bills and place ONE inside each piece of paper that
you just wrote on, and fold each piece of paper so the bill will not be seen in the envelope (otherwise, nosey people who like to steal envelopes with money in it will get yours). Put one paper inside the envelope and seal it. Do the same for all 5. You should now have 5 envelopes sealed, EACH have a piece of paper AND a $1 bill stuffed inside of the paper. Make sure those words that were stated above are stated on each paper. What you are doing is creating a service by this, this is PERFECTLY LEGAL. Now then, mail the 5 envelopes with the paper and $1 in each to the following 5 addresses:

1. P.DEBOUZY, 9 rue des Lavandieres, 78530 BUC, FRANCE.
2. J. MAHON, 750 Highland Dr. Apt. #210, Ojai, Calif. 930234.
3. P. Rae, 209 Oak Butte CT., Folsom. California. 95630. USA5.
4. M. Rapp, 801 Mockingbird Ct., Hinesville, GA 31313 USA
5. J. Rhodes, 5011 Stoneview Dr., Charlestown, IN 47111

STEP 2: Now take the #1 name off the list that you see above, move the other 4 names up (5 becoming 4, 4 becoming 3, ect.) and put YOUR NAME as number 5 on the list. You can slightly alter this article if you need to, editing what you need to edit.

STEP 3: Post your amended article (with your name at #5) to at least 200 news groups (I think there are close to 18,000 of them). All you need is say, at least 200. HOW TO DO THIS: If you have Netscape 3.0 do EXACTLY the following:

1) Click on any news group like normal, THEN click on 'TO NEWS', which is on the far left when you're in the newsgroups page. This will bring up a box to type a message in.

2) Leave the newsgroup box like it is, CHANGE the subject box to something flashy, like, "NEED CASH $$$ READ HERE $$$" or "FAST CASH"!!!

3) Tab once and you should be ready to type. Now, retype (only once) THIS whole article WORD FOR WORD, except to insert your name at #5, and to remove #1 off the list, plus any other small changes you think you need to make. Keep almost all of it the SAME!

4) When you're done typing the WHOLE article, click on FILE in THIS BOX, RIGHT ABOUVE SEND, NOT WHERE IT SAYS NETSCAPE NEWS ON THE FIRST BOX. Click on SAVE AS when you're under FILE. Save you artcle as a text file to your C: or A: drive. DO NOT SEND OR POST YOUR ARTICLE UNTIL YOU DO THIS. Once saved, move on to number 5 below.

5) If you still have all of your text, send or post to this newsgroup now by just clicking send, which is right below FILE, and right above Cc: .

6)Here's where you're going to post all 200. OK, click on any news group then click on 'TO NEWS', again in the top left corner. Leave the NEWSGROUPS BOX alone again, put a flashy subject title in the SUBJECT BOX, hit TAB once you're in the body of the message, and then click on ATTACHMENTS, which is below the SUBJECT BOX. You will get another box to come up. Click on ATTACH FILE, then find YOUR file that you saved; click once on the file, and then click OPEN' now click on OK; if you did this right, you should see your file name in the attachments box, and it will be shaded green.

IF YOU USE IE EXPLORER IT'S JUST AS EASY...HOLDING DOWN THE LEFT MOUSE BUTTON, HIGHLIGHT THIS ARTICLE. THEN PRESS THE "CRTL" KEY AND THE "C" KEY AT THE SAME TIME TO COPY THIS ARTICLE. THEN PRINT THIS ARTICLE FOR YOUR RECORDS TO HAVE THE NAMES OF THOSE YOU WILL BE SENDING $1 BILLS TO. NEXT GO TO THE NEWS GROUPS AND PRESS "POST AN ARTICLE" A WINDOW WILL OPEN. TYPE IN YOUR HEADLINE IN THE SUBJECT AREA AND THEN CLICK IN THE LARGE WINDOW BELOW. PRESS "CRTL" AND THEN "V" AND THE ARTICLE WILL BE PLACED IN THE WINDOW. IF YOU WANT TO EDIT THE ARTICLE, DO SO AND THEN HIGHLIGHT AND COPY IT AGAIN. NOW EVERYTIME YOU POST THE ARTICLE

IN
A NEW NEWSGROUP ALL YOU HAVE TO REPEAT "CTRL" AND "V" AND PRESS POST.

7)That's it. Each time you do this, all you have to do is type in a different newsgroup, so that way, it posts to 200 DIFFERENT newsgroups, you see? Now you just have 199 to go!! (Don't worry, each one takes about 30 seconds, once you get used to it) REMEMBER 200 IS THE MINIMUM. The more you post the more money you will make.

AND THAT'S IT!!! THAT'S THE ONLY 3 STEPS THERE IS!!!

You are now in the mail order business and will start recieving your $1 envelopes from various people all over the world within days. HINT THE MORE NEWSGROUPS YOU POST TO, THE MORE MONEY YOU WILL MAKE. You may want to rent a PO Box eventually because of all the mail. If you wish to stay anonymous, you can come up with a name, such as "manager" or "investor". Just make sure all the addresses are CORRECT, please.

LET ME TELL YOU WHY THIS SYSTEM WORK!!!!

Out of every 200 postings, let's say I ONLY recieve 5 replies, which is actually VERY LOW. So I made 5 dollars with my name at #5. Now then, each person who just sent me $1 makes, say only 200 postings, now with your name at number 4, WHICH IS A TOTAL OF 1000 POSTINGS, not including yours too. 50 people send you $1 now; thats $50 you just made! Now, then your new 50 agents post 200 each with YOUR NAME AT NUMBER 3, OR 10,000 POSTING (50x200). Average return is 500 at $1 each is $500. They make 200 postings, which is 5,000 returns at $1 each, which is $5000 dollars! And finally, 5000 people make 200 postings wach with YOUR NAME AT NUMBER 1. YOU NOW GET A RETURN OF $50,000 BEFORE YOUR NAME DROPS OFF THE LIST. AND THAT'S IF EVERYONE MAKES 200 POSTINGS ONLY, AND IF ONLY 5 PERSONS RESPOND!!!!!
When your name is no longer on the list, you just take the latest

posting that is appearing in the newsgroups, and SEND OUT ANOTHER $5 TO THE NAMES ON THE LIST, PUTTING YOUR NAME AT 5 AGAIN. And start posting again. The thing to remember is, do you realize that THOUSANDS OF PEOPLE ALL OVER THE WORLD ARE JOINING THE INTERNET AND READING THESE ARTICLES EVERY DAY, JUST LIKE YOU ARE RIGHT NOW!!! So can afford $5 dollars and see if it really works? I think so.....
People have said, "What if the plan is played out and no one sends you
the money?" So what! What are the chances of that happening when there are TONS OF NEW HONEST USERS AND NEW HONEST PEOPLE who are joining the Internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with THOUSANDS of those joing the actual Internet. Remember, play FAIRLY and HONESTLY and this WILL WORK, I PROMISE YOU!!! You just have to be honest. Make sure you print this article out RIGHT NOW, also, try to keep a list of everyone that sends you money and always keep an eye on the mnewsgroups to make sure everyone is playing fairly. REMEMBER, HONESTY IS THE BEST POLICY. YOU DON'T NEED TO CHEAT THE BASIC IDEA TO MAKE MONEY!! GOOD LUCK TO ALL AND PLEASE PLAY FAIRLY AND YOU WILL REAP THE HUGE REWARDS FROM THIS, WHICH IS TONS OF EXTRA CASH!!!
**By the way, if you try to decieve people by posting the

messages with
your name on the list and not sending the money to the people already

on
the list, you will not get much. Someone I talKed to knew someone who did that and he only made $150 dollars, and that's AFTER seven or eight weeks! Then he sent the 5 $1 bills, people added him to their lists, and in 4-5 weeks, he had over $10K.
THIS IS THE FAIREST AND MOST HONEST WAY I HAVE EVER SEEN TO SHARE THE WEALTH OF THE WORLD WITHOUT COSTING ANYTHING BUT OUR TIME!!!

Subject: Looking for equipment selection advice Yaesu vs Icom vs Kenwood for satellite

Hi,
I am interested in getting a new radio for P3D. The 736 seems to be the historical favorite but there are new radios from Kenwood and Icom. Has anyone compared the features or performance? Do the Kenwood or Icom radios have the same special satellite oriented features that the Yaesu 736 has? If you were going to buy one which one would you choose and why?

I am planning to operate on 1.2 GHz in addition to 2 and 440.

I would also be interested to know what you would recommend for 2.3 GHz.

Thanks very much for you advice in advance.

Subject: Mir back on packet

Hi just a quick note-- the Two meter antenna was broken on the first EVA and they did a second EVA today and did a makeshift repair which will work, but the signal will not be as strong or as steady as before.. but it will work for the time being, they will fix the coax and on the next planned EVA make the proper repair.. I have no idea when that will be.. 73 DAVE N1PPP

Can anyone give me the low down on what is required in order to receive
live NASA TV. I don't know much about this, but would like to learn. I
would like to be able to receive NASA live TV during the shuttle
flights. What would I need in order to do this?

I receive live NASA video and have rebroadcast the audio in the past.
All that is required is a BUD (Big Ugly Dish) for C-band tvro, and point
it at satellite S-2, transponder 09.

What's the chance of getting DirecTV or USSB to carry NASA Select if we
all wrote or called? Anyone have any inside info on these DSS providers?

From: kwalker@qb.island.net (Ken Walker)
Subject: PacSat for Offshore Sailing

I have not followed the development of the packet capable amateur satellites but I believe there are some in operation. As a sometimes off shore sailor and a radio amateur, I am asked by fellow sailors whether they should get a ham licence and how effective it would be. I tell them about 20m ssb, about hf packet and amtor but I also go on about how low earth store and forward packet satellites will be available one day. But maybe they are now?

The ideal packet system for offshore use would allow the offshore sailing ham to prepare a packet message and the software would determine when a bird is overhead and send up the message and pick up any waiting mail. Are these birds ready to do this? Is there software that would do it? Am I right that these can be worked with small omni antennas?

I think they require dual band operation? Which bands? Hopefully they are bands that can be worked with readily available dual band mobile rigs?

I have thought about this from time to time but I am not up to date on what is available. Anyone want to try to update me??

Thanks.

Greetings all,
this post is a call for information. I am trying to setup a satellite station
for my grandfather, (a 78 YO ham..kb2wfn) and I figured that you all could help me.
What equipment are you all using for up / downlink radios..
, antennas? The operating budget is around $600.00 but if your system cost more than that feel free to tell me about it. I just wanted to get an idea of
what everyone was using.

I've used a IC251A with 10 watts into a Jpole, and a beat-up Undien 2510
fed with a 100 foot long dipole. No problem working ssb or CW on RS-10,
CW only on RS15.

When I added a Hamtronics downconverter for 70cm, I could work FO-20
quite often as well.

Kurt, when I wrote my routines for FT736R CAT (published on this
BBS) I discovered that Yaesu did a great job and introduced only 2
bugs.

One was that if the radio is in (say ) 2m RX /70cm TX, then the CAT cannot
change it to 70cm RX /2m TX! This is because you have to make the
changes in two stages, e.g. 2/70 -> 2/2 -> 70/2.

Obviously the middle step is inadmissable. If your radio has a third
module (e.g.
23cm), then you can go 2/70 -> 23/70 -> 23/2 -> 70/2.

The other bug concerns reading the s-meter and squelch. This
sometimes misses the last byte.

So your problem is not a fault of the tracker-box code.

From: dhend@cyberportal.net (Dave Hendrick)
Subject: Mir's EVA

from Chris Van deBerg
MIRNEWS 10 DECEMBER 1996 (338)

2d Spacewalk (EVA) 22d Mainexpedition (ME) MIR:

This EVA took place on 9.12.1996 between 1352UTC (opening hatch) and 2028UTC (closing hatch). So a duration of 6 hrs 36 mins. The EVA lasted longer for Korzun wished to accomplish all what had to be done and there also was a problem with something which bungled loose. Before return they restored the connection of the radio-amateurantenne for the 145 mc. Probably this antenne had been disconnected by accident during the 1st EVA. They connected the antenna again and while they were flying over Chile and Brasil they asked John Blaha to listen out on the 145.800 mc to check whether the antenne was working or not. There was no traffic on that frequency in that area and so they had to wait until they came in range of European amateurs. I asked the English radio-amateur Pat Gowen (G3IOR) to give calls on 145.800 mc as soon as MIR would come in range (at abt. 1934UTC). So he did and these signals could be heard by John Blaha while MIR was flying over France. He reported this to the still being on EVA Korzun and Kaleri and congratulated them with their success. Korzun urged John not to transmit, but to listen only. The cosmonauts fully accomplished their tasks: installing the truss construction Rapana at the truss Ferma-3 and the replacement of the Kurs-antenna on the outersurface of the P.Kh.O. (transitionsection). John Blaha who stayed inside the complex took care of the communications and executed commands given to him by TsUP. He gave the cosmonauts all possible moral and technical help. The cosmonauts and Blaha did an excellent job during this EVA, they gave an example of fruitful international cooperation and so they all deserve a loud: 'MOLODTSY' (very well done).
Of course the cosmonauts were very tired after the EVA and back in the airlock they had to do hard labour to put off their spacesuits.
Just before midnight Korzun could be heard in a contact

with a Portugese radio-amateur via the repaired antenne
for the 145 mc.

Thusfar there are no more EVA's on schedule for this
crew.
I hope this fills in the gaps, it was working much better tonight,
they must have found something else..

I believe the local cable company (TCI) here in the Clear Lake area of Houston (near Johnson Space Center) carries NASA TV (NASA Select is a non-term....). It's been years since I was a subscriber, but back then, they were just carrying it during missions. I have heard they are carrying it 24 hours a day, now. But, I don't know that firsthand. I believe a lot of people asked the cable company for it and TCI (then Storer Cable) accomodated.

I suppose the same could happen with the DSS groups. Also, with local cable companies, if enough of their subscribers request it. Having a few school administrations backing the request might help, too.

Press for mission and non-mission airing of NASA TV. Might as well go all the way. Maybe it can be compromised down to mission coverage.

Good luck,

Subject: RS-10 /RS-15 what are you using?

For RS-10/11 ssb I,m using a Yaesu ft726r up with 15 to 160watts with a 7db gain 2m vertical. Dowm I'm using an Icom 706 with a homebrew 1/4 wave 10m wire vertical. RS-15 same setup no contacts yet. Seems to be alot of fading in and out, might need a cicular polarized antenna system ?

Subject: RS-10 /RS-15 what are you using?

I am using up to 100w SSB with a J-pole ant for the uplink, & this is plenty for RS-10, but not good enough for RS-15 (steerable beam in progress).

I use a horizontal loop at about 25ft for 10m receive, & this works well for on RS-10, only ok for RS-15 on near-overhead passes. I find vertical antennas too noisy.

Methinks a "C" band dish setup is required. I don't think the digital
guys like Dish, USSB, Primestar, etc. are carrying NASA TV. For the
"bird" and transponder, check a copy of Satellite Times.

From: Herb Perkins <wa2jrv@amsat.org>
Subject: PacSat for Offshore Sailing

Ken,

I may not be of much help but I have assisted W4AVO (George) put his station together. He is a live aboard and blue water sailor. Last year he was in the Bahamas and will be there again this year. He has been on UO22 and has used his station very succesfully. AF4N Wes and I have both put in a good bit of time getting his boat ready (all three of us are sailors). George just went off internet and will be on the air for the next six months. Wes and I will be on internet and can offer some suggestions.

The first point is that it is not difficult and even underway the system works just fine. However antenna placement is a problem. George uses one J pole for up link and a small yagi for down link (3 elements). He rotates it 180 degrees during the pass and has no difficulity going from the radio to the cockpit to make the change. Since UO22 is basically automated his computer does all the work.

He uses a 386 that is not fast and is just a work horse.

If I can be of help please contact me.

1. I have about 100ft of feedline
2. I know the J-pole is not properly tuned yet (it's igloo-time up here)
3. I am surrounded by apartment buildings
4. In my experience, & in my situation, low power & omni-antennas work only when the satellite is on a near-overhead pass, and the satellite is not busy. I have almost given up working weekends, due to being stomped on.
5. If you want to work passes other than overhead, then because of the path loss, there is no choice but to increase power &/or antenna gain.

6. I was trying to give this guy the confidence that with his TX set-up
he darn well ought to be able to make contacts.

```

I'm kind of on the same quest. At least to figure out where to spend the first $2K. Which I don't think is really cheap by most people's standards, but which is a little bit less than what it takes to walk into HRO and just do the whole thing brand new. My impression is that the guys who are pretty serious about this seem to have the 726 or 736 and the KLM/M2 antenna set. Personally, I put a lot of confidence in conventional wisdom. So, to go this way, the game seems to become, how to scrounge up this kind of system. (Of course with preaamps, amplifiers and all that.)

Personally, my thinking now on how to do this in gradual, stages is to do the antenna side first. New. At least deal with the tracking, feedline and preamp issues. While finding a used 2M SSB radio. Maybe working RS-10 , Mir or something, and then trying to hear sats on 440 Mhz with converters. (Not sure if 440->28mHZ or 440->144Mhz is better?)

By then, I figure a few months will have passed, I'll be able to hear what's going on, and either I'll be anxious to be rid of the whole thing or I'll be lusting after a, probably used, 726/736. By then, I figure we'll know whether P3d is going to be really cool, etc. Fingers crossed.

From: "Roger E. Koss" <kossr@edl1.ksc.nasa.gov>
Subject: Best Ant for RS-10 Down Link

Brad:
I'm using a dipole cut for 10 meters, up only about 15 feet, and it
works just fine into a Uniden HR2600. For my uplink, I have a 5/8 wave
homebrew groundplane up 30', which I feed with 25 watts from a Yaesu
FT-290R Mk II. RS-10 has a very sensitive receiver and an excellent
transmitter. Much more than this would be overkill. Hope to work you on
the birds someday.

From: ashleyb@ohsu.edu
Subject: Best Ant for RS-10 Down Link

To The Group:

I'm in the process of setting up a satelite system. A few local guys
are having fun with RS-10. What I would like to do is to set up a nice
beginners station. I currently have a IC-275A with a GP-3 for the Up link
and two different HF xcvr's to set up the down link. My question is would
an HF vertical like the Ringo ranger AR-10 work or maybe an inverted V
dipole. I am reading the ARRL satelite handbook but I'd like to hear from
some people actually working the birds. Also should I get a pre-amp and if
so does anyone have any recommendations ie buy,build?? Thanks for your
help.

RS-10 has a very strong downlink for an amatuer satellite. I put up a
Ringo, but can honestly say that it didn't offer any better performance
than a simple dipole.

Try orienting the dipole for best north/south reception. Don't worry about a pre-amp. I used a Radio Shack 10m rig to listen to my downlinks.

Subject: free money

Oh! My? $$$$
THIS IS THE FAIREST MOST HONEST WAY I KNOW TO SHARE THE WEALTH! Hello! (Save this file now...it will save you some time typing later if you decide to try this)
Would you like to make thousands of dollars, quick, legally, with NO CATCH? Then keep reading....please take five minutes to read this article it will change your life, just like it did mine. It's true! You can make up to or over $50,000 dollars in 4-6 weeks, maybe sooner! I SWEAR I'M NOT LYING TO YOU, AND THIS IS NOT A SCAM! If you're intrested, keep reading; if you're not, I apologize for wasting your time.
Here we go. A little while back, I was browsing through these newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars in weeks with only an initial investment of $5! So, I thought, "Yeah, right, must be a scam", but I was curious, like most of us , so I kept reading. Anyway, it
said that you send $1 to each of the 5 names and addresses stated in the article. You then place your own name and address in the article at the bottom of the list at #5, and post the article in at least 200

newsgroups (there are thousands). No catch, that was it!
So after thinking it over, talking to a few people first, I tried it.
I figured what have I got to lose except for 5 stamps and $5, right?
Well, guess what...within 7 days, I started getting money in the mail!
I was shocked! I still figured it would end soon, and didn't give it
another thought. But then money kept coming IN, tripling in size and
multiplying by 10-20 times the amount that I got the first week! In my
first week I made about 20 to 30 dollars. But by the end of the second
week, I had made a total of over $1,000!!!! In the third week, I had
over $10,000 dollars, and it's still growing. This is my fourth week
(Oct 11) and I've made about $42,000 TOTAL, and the money is still
coming in.....
Let me tell you how this works and most importantly, WHY it
works...also, make sure you print a copy of the article NOW, so you get
the information off of it, and begin making money.

The process is very simple, and it consists of 3 EASY steps:

STEP 1: Get 5 seperate pieces of paper and write the following on each
sheet of paper..."PLEASE PUT ME ON YOUR MAILING LIST. YOU ARE NUMBER
5." (etc. to number 1) Get five $1 bills and place ONE inside each piece
of paper that
you just wrote on, and fold each piece of paper so the bill will not be
seen in the envelope (otherwise, nosey people who like to steal envelopes
with money in it will get yours). Put one paper inside the envelope
and seal it. Do the same for all 5. You should now have 5 envelopes
sealed, EACH have a piece of paper AND a $1 bill stuffed inside of the
paper. Make sure those words that were stated above are stated on each
paper. What you are doing is creating a service by this, this is
PERFECTLY LEGAL. Now then, mail the 5 envelopes with the paper and $1
in each to the following 5 addresses:

1. P.DEBOUZY, 9 rue des Lavandieres, 78530 BUC, FRANCE.
2. J. MAHON, 750 Highland Dr. Apt. #210, Ojai, Calif. 930234.
3. P. Rae, 209 Oak Butte CT., Folsom. California. 95630. USA5.
4. M. Rapp, 801 Mockingbird Ct., Hinesville, GA 31313 USA
5. J. Rhodes, 5011 Stoneview Dr., Charlestown, IN 47111

STEP 2: Now take the #1 name off the list that you see above, move the
other 4 names up (5 becoming 4, 4 becoming 3, ect.) and put YOUR NAME
as number 5 on the list. You can slightly alter this article if you need
to, editing what you need to edit.

STEP 3: Post your amended article (with your name at #5) to at least
200 news groups (I think there are close to 18,000 of them). All you
need is say, at least 200. HOW TO DO THIS: If you have Netscape 3.0
do EXACTLY the following:

1) Click on any news group like normal, THEN click on 'TO NEWS', which
is on the far left when you're in the newsgroups page. This will bring
up a box to type a message in.

2) Leave the newsgroup box like it is, CHANGE the subject box to something flashy, like, "NEED CASH $$$ READ HERE $$$" or "FAST CASH"!!!

3) Tab once and you should be ready to type. Now, retype (only once) THIS whole article WORD FOR WORD, except to insert your name at #5, and to remove #1 off the list, plus any other small changes you think you need to make. Keep almost all of it the SAME!

4) When you're done typing the WHOLE article, click on FILE in THIS BOX, RIGHT ABOUVE SEND, NOT WHERE IT SAYS NETSCAPE NEWS ON THE FIRST BOX. Click on SAVE AS when you're under FILE. Save you artcle as a text file to your C: or A: drive. DO NOT SEND OR POST YOUR ARTICLE UNTIL YOU DO THIS. Once saved, move on to number 5 below.

5) If you still have all of your text, send or post to this newsgroup now by just clicking send, which is right below FILE, and right above Cc: .

6)Here's where you're going to post all 200. OK, click on any news group then click on 'TO NEWS', again in the top left corner. Leave the NEWSGROUPS BOX alone again, put a flashy subject title in the SUBJECT BOX, hit TAB once you're in the body of the message, and then click on ATTACHMENTS, which is below the SUBJECT BOX. You will get another box to come up. Click on ATTACH FILE, then find YOUR file that you saved; click once on the file, and then click OPEN' now click on OK; if you did this right, you should see your file name in the attachments box, and it will be shaded green.

IF YOU USE IE EXPLORER IT'S JUST AS EASY...HOLDING DOWN THE LEFT MOUSE BUTTON, HIGHLIGHT THIS ARTICLE. THEN PRESS THE "CRTL" KEY AND THE "C" KEY AT THE SAME TIME TO COPY THIS ARTICLE. THEN PRINT THIS ARTICLE FOR YOUR RECORDS TO HAVE THE NAMES OF THOSE YOU WILL BE SENDING $1 BILLS TO. NEXT GO TO THE NEWS GROUPS AND PRESS "POST AN ARTICLE" A WINDOW WILL OPEN. TYPE IN YOUR HEADLINE IN THE SUBJECT AREA AND THEN CLICK IN THE LARGE WINDOW BELOW. PRESS "CRTL" AND THEN "V" AND THE ARTICLE WILL BE PLACED IN THE WINDOW. IF YOU WANT TO EDIT THE ARTICLE, DO SO AND THEN HIGHLIGHT AND COPY IT AGAIN. NOW EVERYTIME YOU POST THE ARTICLE

IN
A NEW NEWSGROUP ALL YOU HAVE TO REPEAT "CTRL" AND "V" AND PRESS POST.

7)That's it. Each time you do this, all you have to do is type in a different newsgroup, so that way, it posts to 200 DIFFERENT newsgroups, you see? Now you just have 199 to go!! (Don't worry, each one takes about 30 seconds, once you get used to it) REMEMBER 200 IS THE MINIMUM. The more you post the more money you will make.

AND THAT'S IT!!! THAT'S THE ONLY 3 STEPS THERE IS!!!

You are now in the mail order business and will start recieving your $1 envelopes from various people all over the world within days. HINT THE MORE NEWSGROUPS YOU POST TO, THE MORE MONEY YOU WILL MAKE. You may want to rent a PO Box eventually because of all the mail. If you wish to stay anonymous, you can come up with a name, such as "manager" or

"investor". Just make sure all the addresses are CORRECT, please.

LET ME TELL YOU WHY THIS SYSTEM WORK!!!!

Out of every 200 postings, let's say I ONLY recieve 5 replies, which is actually VERY LOW. So I made 5 dollars with my name at #5. Now then, each person who just sent me $1 makes, say only 200 postings, now with your name at number 4, WHICH IS A TOTAL OF 1000 POSTINGS, not including yours too. 50 people send you $1 now; thats $50 you just made! Now, then your new 50 agents post 200 each with YOUR NAME AT NUMBER 3, OR 10,000 POSTING (50x200). Average return is 500 at $1 each is $500. They make 200 postings, which is 5,000 returns at $1 each, which is $5000 dollars! And finally, 5000 people make 200 postings wach with YOUR NAME AT NUMBER 1. YOU NOW GET A RETURN OF $50,000 BEFORE YOUR NAME DROPS OFF THE LIST. AND THAT'S IF EVERYONE MAKES 200 POSTINGS ONLY, AND IF ONLY 5 PERSONS RESPOND!!!!!
When your name is no longer on the list, you just take the latest posting that is appearing in the newsgroups, and SEND OUT ANOTHER $5 TO THE NAMES ON THE LIST, PUTTING YOUR NAME AT 5 AGAIN. And start posting again. The thing to remember is, do you realize that THOUSANDS OF PEOPLE ALL OVER THE WORLD ARE JOINING THE INTERNET AND READING THESE ARTICLES EVERY DAY, JUST LIKE YOU ARE RIGHT NOW!!! So can afford $5 dollars and see if it really works? I think so.....
People have said, "What if the plan is played out and no one
sends you
the money?" So what! What are the chances of that happening when there are TONS OF NEW HONEST USERS AND NEW HONEST PEOPLE who are joining the Internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with THOUSANDS of those joing the actual Internet. Remember, play FAIRLY and HONESTLY and this WILL WORK, I PROMISE YOU!!! You just have to be honest. Make sure you print this article out RIGHT NOW, also, try to keep a list of everyone that sends you money and always keep an eye on the mnewsgroups to make sure everyone is playing fairly. REMEMBER, HONESTY IS THE BEST POLICY. YOU DON'T NEED TO CHEAT THE BASIC IDEA TO MAKE MONEY!! GOOD LUCK TO ALL AND PLEASE PLAY FAIRLY AND YOU WILL REAP THE HUGE REWARDS FROM THIS, WHICH IS TONS OF EXTRA CASH!!!
**By the way, if you try to decieve people by posting the

messages with
your name on the list and not sending the money to the people already

on
the list, you will not get much. Someone I talKed to knew someone who did that and he only made $150 dollars, and that's AFTER seven or eight weeks! Then he sent the 5 $1 bills, people added him to their lists, and in 4-5 weeks, he had over $10K.
THIS IS THE FAIREST AND MOST HONEST WAY I HAVE EVER SEEN TO SHARE THE WEALTH OF THE WORLD WITHOUT COSTING ANYTHING BUT OUR TIME!!!

Subject: Looking for equipment selection advice Yaesu vs Icom vs Kenwood for
satellite

Hi,
I am interested in getting a new radio for P3D. The 736 seems to be the
historical favorite but there are new radios from Kenwood and Icom. Has
anyone compared the features or performance? Do the Kenwood or Icom
radios have the same special satellite oriented features that the Yaesu
736 has? If you were going to buy one which one would you choose and
why?

I am planning to operate on 1.2 GHz in addition to 2 and 440.

I would also be interested to know what you would recommend for 2.3 GHz.

Thanks very much for you advice in advance.

Hi just a quick note-- the Two meter antenna was broken on the first
EVA and they did a second EVA today and did a makeshift repair which
will work, but the signal will not be as strong or as steady as
before.. but it will work for the time being, they will fix the coax
and on the next planned EVA make the proper repair.. I have no idea
when that will be.. 73 DAVE N1PPP

What's the chance of getting DirecTV or USSB to carry NASA Select if we all wrote or called? Anyone have any inside info on these DSS providers?

From: kwalker@qb.island.net (Ken Walker)
Subject: PacSat for Offshore Sailing

I have not followed the development of the packet capable amateur satellites
but I believe there are some in operation. As a sometimes off shore sailor
and a radio amateur, I am asked by fellow sailors whether they should get a
ham licence and how effective it would be. I tell them about 20m ssb, about
hf packet and amtor but I also go on about how low earth store and forward
packet satellites will be available one day. But maybe they are now?

The ideal packet system for offshore use would allow the offshore sailing ham
to prepare a packet message and the software would determine when a bird is
overhead and send up the message and pick up any waiting mail. Are these
birds ready to do this? Is there software that would do it? Am I right that
these can be worked with small omni antennas?

I think they require dual band operation? Which bands? Hopefully they are
bands that can be worked with readily available dual band mobile rigs?

I have thought about this from time to time but I am not up to date on what is
available. Anyone want to try to update me??

Thanks.

Subject: RS-10 /RS-15 what are you using?

Greetings all,
this post is a call for information. I am trying to setup a satellite
station
for my grandfather, (a 78 YO ham..kb2wfn) and I figured that you all could
help me.
What equipment are you all using for up / downlink radios..

, antennas? The operating budget is around $600.00 but if your system cost
more than that feel free to tell me about it. I just wanted to get an idea
of
what everyone was using.

I've used a IC251A with 10 watts into a Jpole, and a beat-up Undien 2510
fed with a 100 foot long dipole. No problem working ssb or CW on RS-10,
CW only on RS15.

When I added a Hamtronics downconverter for 70cm, I could work FO-20
quite often as well.

```

Kurt, when I wrote my routines for FT736R CAT (published on this BBS) I discovered that Yaesu did a great job and introduced only 2 bugs.

One was that if the radio is in (say) 2m RX /70cm TX, then the CAT cannot change it to 70cm RX /2m TX! This is because you have to make the changes in two stages, e.g. 2/70 -> 2/2 -> 70/2.

Obviously the middle step is inadmissable. If your radio has a third module (e.g.
23cm), then you can go 2/70 -> 23/70 -> 23/2 -> 70/2.

The other bug concerns reading the s-meter and squelch. This sometimes misses the last byte.

So your problem is not a fault of the tracker-box code.

Subject: Mir's EVA

from Chris Van deBerg
MIRNEWS 10 DECEMBER 1996 (338)

2d Spacewalk (EVA) 22d Mainexpedition (ME) MIR:

This EVA took place on 9.12.1996 between 1352UTC (opening hatch) and 2028UTC (closing hatch). So a duration of 6 hrs 36 mins. The EVA lasted longer for Korzun wished to accomplish all what had to be done and there also was a problem with something which bungled loose. Before return they restored the connection of the radio-amateurantenne for the 145 mc. Probably this antenne had been disconnected by accident during the 1st EVA. They connected the antenna again and while they were flying over Chile and Brasil they asked John Blaha to listen out on the 145.800 mc to check whether the antenne was working or not. There was no traffic on that frequency in that area and so they had to wait until they came in range of European amateurs. I asked the English radio-amateur Pat Gowen (G3IOR) to give calls on 145.800 mc as soon as MIR would come in range (at abt. 1934UTC). So he did and these signals could be heard by John Blaha while MIR was flying over France. He reported this to the

still being on EVA Korzun and Kaleri and congratulated
them with their success. Korzun urged John not to
transmit, but to listen only. The cosmonauts fully
accomplished their tasks: installing the truss
construction Rapana at the truss Ferma-3 and the
replacement of the Kurs-antenna on the outersurface of
the P.Kh.O. (transitionsection). John Blaha who stayed
inside the complex took care of the communications and
executed commands given to him by TsUP. He gave the
cosmonauts all possible moral and technical help. The
cosmonauts and Blaha did an excellent job during this
EVA, they gave an example of fruitful international
cooperation and so they all deserve a loud: 'MOLODTSY'
(very well done).
Of course the cosmonauts were very tired after the EVA
and back in the airlock they had to do hard labour to
put off their spacesuits.
Just before midnight Korzun could be heard in a contact
with a Portugese radio-amateur via the repaired antenne
for the 145 mc.

Thusfar there are no more EVA's on schedule for this
crew.
I hope this fills in the gaps, it was working much better tonight,
they must have found something else..

I believe the local cable company (TCI) here in the Clear Lake area of
Houston (near Johnson Space Center) carries NASA TV (NASA Select is a
non-term....). It's been years since I was a subscriber, but back then,
they were just carrying it during missions. I have heard they are carrying
it 24 hours a day, now. But, I don't know that firsthand. I believe a lot
of people asked the cable company for it and TCI (then Storer Cable)
accomodated.

I suppose the same could happen with the DSS groups. Also, with local
cable companies, if enough of their subscribers request it. Having a few
school administrations backing the request might help, too.

Press for mission and non-mission airing of NASA TV. Might as well go all
the way. Maybe it can be compromised down to mission coverage.

Good luck,

Subject: RS-10 /RS-15 what are you using?

I am using up to 100w SSB with a J-pole ant for the uplink, & this is
plenty for RS-10, but not good enough for RS-15 (steerable beam in
progress).

I use a horizontal loop at about 25ft for 10m receive, & this works well
for on RS-10, only ok for RS-15 on near-overhead passes. I find vertical
antennas too noisy.

Methinks a "C" band dish setup is required. I don't think the digital guys like Dish, USSB, Primestar, etc. are carrying NASA TV. For the "bird" and transponder, check a copy of Satellite Times.

Subject: PacSat for Offshore Sailing

Ken,

I may not be of much help but I have assisted W4AVO (George) put his station together. He is a live aboard and blue water sailor. Last year he was in the Bahamas and will be there again this year. He has been on UO22 and has used his station very succesfully. AF4N Wes and I have both put in a good bit of time getting his boat ready (all three of us are sailors). George just went off internet and will be on the air for the next six months. Wes and I will be on internet and can offer some suggestions.

The first point is that it is not difficult and even underway the system works just fine. However antenna placement is a problem. George uses one J pole for up link and a small yagi for down link (3 elements). He rotates it 180 degrees during the pass and has no difficulity going from the radio to the cockpit to make the change. Since UO22 is basically automated his computer does all the work.

He uses a 386 that is not fast and is just a work horse.

If I can be of help please contact me.

1. I have about 100ft of feedline
2. I know the J-pole is not properly tuned yet (it's igloo-time up here)
3. I am surrounded by apartment buildings
4. In my experience, & in my situation, low power & omni-antennas work only when the satellite is on a near-overhead pass, and the satellite is not busy. I have almost given up working weekends, due to being stomped on.
5. If you want to work passes other than overhead, then because of the path loss, there is no choice but to increase power &/or antenna gain.
6. I was trying to give this guy the confidence that with his TX set-up he darn well ought to be able to make contacts.

>Thanks de wa1vht

I'm kind of on the same quest. At least to figure out where to spend the
first $2K. Which I don't think is really cheap by most people's standards,
but which is a little bit less than what it takes to walk into HRO and
just do the whole thing brand new. My impression is that the guys who
are pretty serious about this seem to have the 726 or 736 and the KLM/M2
antenna set. Personally, I put a lot of confidence in conventional
wisdom. So, to go this way, the game seems to become, how to scrounge up
this kind of system. (Of course with preaamps, amplifiers and all that.)

Personally, my thinking now on how to do this in gradual, stages
is to do the antenna side first. New. At least deal with
the tracking, feedline and preamp issues. While finding a used 2M SSB radio.
Maybe working RS-10 , Mir or something, and then trying to hear sats on
440 Mhz with converters. (Not sure if 440->28mHZ or 440->144Mhz is better?)

By then, I figure a few months will have passed, I'll be able to hear
what's going on, and either I'll be anxious to be rid of the whole thing
or I'll be lusting after a, probably used, 726/736. By then, I figure we'll
know whether P3d is going to be really cool, etc. Fingers crossed.

From: ashleyb@ohsu.edu
Subject: Best Ant for RS-10 Down Link

To The Group:

I'm in the process of setting up a satelite system. A few local guys
are having fun with RS-10. What I would like to do is to set up a nice
beginners station. I currently have a IC-275A with a GP-3 for the Up link
and two different HF xcvr's to set up the down link. My question is would
an HF vertical like the Ringo ranger AR-10 work or maybe an inverted V
dipole. I am reading the ARRL satelite handbook but I'd like to hear from
some people actually working the birds. Also should I get a pre-amp and if
so does anyone have any recommendations ie buy,build?? Thanks for your
help.

RS-10 has a very strong downlink for an amatuer satellite. I put up a Ringo, but can honestly say that it didn't offer any better performance than a simple dipole.

Try orienting the dipole for best north/south reception. Don't worry about a pre-amp. I used a Radio Shack 10m rig to listen to my downlinks.

From: wa4twa@versoft.com
Subject: Cu-Seeme Video conferencing

Does anyone know of anyone using Video Conferencing on computer/internet in conjunction with amateur redio? I have been in contact with hundreds of people from around the world on Cu-Seeme and have run into only one ham. Is there a freq. HF or VHF where hams may hang out that use both modes..computer and radio. I believe this would be a natural progression from Slow Scan. We now can SEE the people we are in QSO with.

If you are interested in setting up a sched. and have Video COnferencing capabilities or are just interested drop me an e-mail,

Subject: free money

Oh! My? $$$$
THIS IS THE FAIREST MOST HONEST WAY I KNOW TO SHARE THE WEALTH! Hello! (Save this file now...it will save you some time typing later if you decide to try this)
Would you like to make thousands of dollars, quick, legally, with NO CATCH? Then keep reading....please take five minutes to read this article it will change your life, just like it did mine. It's true! You can make up to or over $50,000 dollars in 4-6 weeks, maybe sooner! I SWEAR I'M NOT LYING TO YOU, AND THIS IS NOT A SCAM! If you're intrested, keep reading; if you're not, I apologize for wasting your time.
Here we go. A little while back, I was browsing through these

newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars in weeks with only an initial investment of $5! So, I thought, "Yeah, right, must be a scam", but I was curious, like most of us , so I kept reading. Anyway, it
said that you send $1 to each of the 5 names and addresses stated in the article. You then place your own name and address in the article at the bottom of the list at #5, and post the article in at least 200 newsgroups (there are thousands). No catch, that was it!
So after thinking it over, talking to a few people first, I tried it. I figured what have I got to lose except for 5 stamps and $5, right? Well, guess what...within 7 days, I started getting money in the mail! I was shocked! I still figured it would end soon, and didn't give it another thought. But then money kept coming IN, tripling in size and multiplying by 10-20 times the amount that I got the first week! In my first week I made about 20 to 30 dollars. But by the end of the second week, I had made a total of over $1,000!!!! In the third week, I had over $10,000 dollars, and it's still growing. This is my fourth week (Oct 11) and I've made about $42,000 TOTAL, and the money is still coming in.....
Let me tell you how this works and most importantly, WHY it works...also, make sure you print a copy of the article NOW, so you get the information off of it, and begin making money.

The process is very simple, and it consists of 3 EASY steps:

STEP 1: Get 5 seperate pieces of paper and write the following on each sheet of paper..."PLEASE PUT ME ON YOUR MAILING LIST. YOU ARE NUMBER 5." (etc. to number 1) Get five $1 bills and place ONE inside each piece of paper that
you just wrote on, and fold each piece of paper so the bill will not be seen in the envelope (otherwise, nosey people who like to steal envelopes with money in it will get yours). Put one paper inside the envelope and seal it. Do the same for all 5. You should now have 5 envelopes sealed, EACH have a piece of paper AND a $1 bill stuffed inside of the paper. Make sure those words that were stated above are stated on each paper. What you are doing is creating a service by this, this is PERFECTLY LEGAL. Now then, mail the 5 envelopes with the paper and $1 in each to the following 5 addresses:

1. P.DEBOUZY, 9 rue des Lavandieres, 78530 BUC, FRANCE.
2. J. MAHON, 750 Highland Dr. Apt. #210, Ojai, Calif. 930234.
3. P. Rae, 209 Oak Butte CT., Folsom. California. 95630. USA5.
4. M. Rapp, 801 Mockingbird Ct., Hinesville, GA 31313 USA
5. J. Rhodes, 5011 Stoneview Dr., Charlestown, IN 47111

STEP 2: Now take the #1 name off the list that you see above, move the other 4 names up (5 becoming 4, 4 becoming 3, ect.) and put YOUR NAME as number 5 on the list. You can slightly alter this article if you need to, editing what you need to edit.

STEP 3: Post your amended article (with your name at #5) to at least 200 news groups (I think there are close to 18,000 of them). All you need is say, at least 200. HOW TO DO THIS: If you have Netscape 3.0 do EXACTLY the following:

1) Click on any news group like normal, THEN click on 'TO NEWS', which is on the far left when you're in the newsgroups page. This will bring up a box to type a message in.

2) Leave the newsgroup box like it is, CHANGE the subject box to something flashy, like, "NEED CASH $$$ READ HERE $$$" or "FAST CASH"!!!

3) Tab once and you should be ready to type. Now, retype (only once) THIS whole article WORD FOR WORD, except to insert your name at #5, and to remove #1 off the list, plus any other small changes you think you need to make. Keep almost all of it the SAME!

4) When you're done typing the WHOLE article, click on FILE in THIS BOX, RIGHT ABOUVE SEND, NOT WHERE IT SAYS NETSCAPE NEWS ON THE FIRST BOX. Click on SAVE AS when you're under FILE. Save you artcle as a text file to your C: or A: drive. DO NOT SEND OR POST YOUR ARTICLE UNTIL YOU DO THIS. Once saved, move on to number 5 below.

5) If you still have all of your text, send or post to this newsgroup now by just clicking send, which is right below FILE, and right above Cc: .

6)Here's where you're going to post all 200. OK, click on any news group then click on 'TO NEWS', again in the top left corner. Leave the NEWSGROUPS BOX alone again, put a flashy subject title in the SUBJECT BOX, hit TAB once you're in the body of the message, and then click on ATTACHMENTS, which is below the SUBJECT BOX. You will get another box to come up. Click on ATTACH FILE, then find YOUR file that you saved; click once on the file, and then click OPEN' now click on OK; if you did this right, you should see your file name in the attachments box, and it will be shaded green.

IF YOU USE IE EXPLORER IT'S JUST AS EASY...HOLDING DOWN THE LEFT MOUSE BUTTON, HIGHLIGHT THIS ARTICLE. THEN PRESS THE "CRTL" KEY AND THE "C" KEY AT THE SAME TIME TO COPY THIS ARTICLE. THEN PRINT THIS ARTICLE FOR YOUR RECORDS TO HAVE THE NAMES OF THOSE YOU WILL BE SENDING $1 BILLS TO. NEXT GO TO THE NEWS GROUPS AND PRESS "POST AN ARTICLE" A WINDOW WILL OPEN. TYPE IN YOUR HEADLINE IN THE SUBJECT AREA AND THEN CLICK IN THE LARGE WINDOW BELOW. PRESS "CRTL" AND THEN "V" AND THE ARTICLE WILL BE PLACED IN THE WINDOW. IF YOU WANT TO EDIT THE ARTICLE, DO SO AND THEN HIGHLIGHT AND COPY IT AGAIN. NOW EVERYTIME YOU POST THE ARTICLE

IN
A NEW NEWSGROUP ALL YOU HAVE TO REPEAT "CTRL" AND "V" AND PRESS POST.

7)That's it. Each time you do this, all you have to do is type in a different newsgroup, so that way, it posts to 200 DIFFERENT newsgroups, you see? Now you just have 199 to go!! (Don't worry, each one takes about 30 seconds, once you get used to it) REMEMBER 200 IS THE MINIMUM.

The more you post the more money you will make.

AND THAT'S IT!!! THAT'S THE ONLY 3 STEPS THERE IS!!!

You are now in the mail order business and will start recieving your $1 envelopes from various people all over the world within days. HINT THE MORE NEWSGROUPS YOU POST TO, THE MORE MONEY YOU WILL MAKE. You may want to rent a PO Box eventually because of all the mail. If you wish to stay anonymous, you can come up with a name, such as "manager" or "investor". Just make sure all the addresses are CORRECT, please.

LET ME TELL YOU WHY THIS SYSTEM WORK!!!!

Out of every 200 postings, let's say I ONLY recieve 5 replies, which is actually VERY LOW. So I made 5 dollars with my name at #5. Now then, each person who just sent me $1 makes, say only 200 postings, now with your name at number 4, WHICH IS A TOTAL OF 1000 POSTINGS, not including yours too. 50 people send you $1 now; thats $50 you just made! Now, then your new 50 agents post 200 each with YOUR NAME AT NUMBER 3, OR 10,000 POSTING (50x200). Average return is 500 at $1 each is $500. They make 200 postings, which is 5,000 returns at $1 each, which is $5000 dollars! And finally, 5000 people make 200 postings wach with YOUR NAME AT NUMBER 1. YOU NOW GET A RETURN OF $50,000 BEFORE YOUR NAME DROPS OFF THE LIST. AND THAT'S IF EVERYONE MAKES 200 POSTINGS ONLY, AND IF ONLY 5 PERSONS RESPOND!!!!!
When your name is no longer on the list, you just take the latest posting that is appearing in the newsgroups, and SEND OUT ANOTHER $5 TO THE NAMES ON THE LIST, PUTTING YOUR NAME AT 5 AGAIN. And start posting again. The thing to remember is, do you realize that THOUSANDS OF PEOPLE ALL OVER THE WORLD ARE JOINING THE INTERNET AND READING THESE ARTICLES EVERY DAY, JUST LIKE YOU ARE RIGHT NOW!!! So can afford $5 dollars and see if it really works? I think so.....
People have said, "What if the plan is played out and no one
sends you
the money?" So what! What are the chances of that happening when there are TONS OF NEW HONEST USERS AND NEW HONEST PEOPLE who are joining the Internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with THOUSANDS of those joing the actual Internet. Remember, play FAIRLY and HONESTLY and this WILL WORK, I PROMISE YOU!!! You just have to be honest. Make sure you print this article out RIGHT NOW, also, try to keep a list of everyone that sends you money and always keep an eye on the mnewsgroups to make sure everyone is playing fairly. REMEMBER, HONESTY IS THE BEST POLICY. YOU DON'T NEED TO CHEAT THE BASIC IDEA TO MAKE MONEY!! GOOD LUCK TO ALL AND PLEASE PLAY FAIRLY AND YOU WILL REAP THE HUGE REWARDS FROM THIS, WHICH IS TONS OF EXTRA CASH!!!
**By the way, if you try to decieve people by posting the

messages with
your name on the list and not sending the money to the people already

on
the list, you will not get much. Someone I talKed to knew someone who
did that and he only made $150 dollars, and that's AFTER seven or eight
weeks! Then he sent the 5 $1 bills, people added him to their lists,
and in 4-5 weeks, he had over $10K.
THIS IS THE FAIREST AND MOST HONEST WAY I HAVE EVER SEEN TO SHARE THE
WEALTH OF THE WORLD WITHOUT COSTING ANYTHING BUT OUR TIME!!!

Hi,
I am interested in getting a new radio for P3D. The 736 seems to be the
historical favorite but there are new radios from Kenwood and Icom. Has
anyone compared the features or performance? Do the Kenwood or Icom
radios have the same special satellite oriented features that the Yaesu
736 has? If you were going to buy one which one would you choose and
why?

I am planning to operate on 1.2 GHz in addition to 2 and 440.

I would also be interested to know what you would recommend for 2.3 GHz.

Thanks very much for you advice in advance.

Hi just a quick note-- the Two meter antenna was broken on the first
EVA and they did a second EVA today and did a makeshift repair which
will work, but the signal will not be as strong or as steady as
before.. but it will work for the time being, they will fix the coax
and on the next planned EVA make the proper repair.. I have no idea
when that will be.. 73 DAVE N1PPP

From: kwalker@qb.island.net (Ken Walker)
Subject: PacSat for Offshore Sailing

I have not followed the development of the packet capable amateur satellites
but I believe there are some in operation. As a sometimes off shore sailor
and a radio amateur, I am asked by fellow sailors whether they should get a
ham licence and how effective it would be. I tell them about 20m ssb, about
hf packet and amtor but I also go on about how low earth store and forward
packet satellites will be available one day. But maybe they are now?

The ideal packet system for offshore use would allow the offshore sailing ham
to prepare a packet message and the software would determine when a bird is
overhead and send up the message and pick up any waiting mail. Are these
birds ready to do this? Is there software that would do it? Am I right that
these can be worked with small omni antennas?

I think they require dual band operation? Which bands? Hopefully they are
bands that can be worked with readily available dual band mobile rigs?

I have thought about this from time to time but I am not up to date on what is
available. Anyone want to try to update me??

Thanks.

Greetings all,
this post is a call for information. I am trying to setup a satellite
station
for my grandfather, (a 78 YO ham..kb2wfn) and I figured that you all could
help me.
What equipment are you all using for up / downlink radios..
, antennas? The operating budget is around $600.00 but if your system cost
more than that feel free to tell me about it. I just wanted to get an idea
of
what everyone was using.

I've used a IC251A with 10 watts into a Jpole, and a beat-up Undien 2510
fed with a 100 foot long dipole. No problem working ssb or CW on RS-10,
CW only on RS15.

When I added a Hamtronics downconverter for 70cm, I could work FO-20
quite often as well.

Kurt, when I wrote my routines for FT736R CAT (published on this
BBS) I discovered that Yaesu did a great job and introduced only 2
bugs.

One was that if the radio is in (say) 2m RX /70cm TX, then the CAT cannot
change it to 70cm RX /2m TX! This is because you have to make the
changes in two stages, e.g. 2/70 -> 2/2 -> 70/2.

Obviously the middle step is inadmissable. If your radio has a third
module (e.g.
23cm), then you can go 2/70 -> 23/70 -> 23/2 -> 70/2.

The other bug concerns reading the s-meter and squelch. This
sometimes misses the last byte.

So your problem is not a fault of the tracker-box code.

From: dhend@cyberportal.net (Dave Hendrick)
Subject: Mir's EVA

from Chris Van deBerg
MIRNEWS 10 DECEMBER 1996 (338)

2d Spacewalk (EVA) 22d Mainexpedition (ME) MIR:

This EVA took place on 9.12.1996 between 1352UTC (opening
hatch) and 2028UTC (closing hatch). So a duration of 6
hrs 36 mins. The EVA lasted longer for Korzun wished to
accomplish all what had to be done and there also was a
problem with something which bungled loose. Before
return they restored the connection of the radio-
amateurantenne for the 145 mc. Probably this antenne had
been disconnected by accident during the 1st EVA. They
connected the antenna again and while they were flying
over Chile and Brasil they asked John Blaha to listen
out on the 145.800 mc to check whether the antenne was

working or not. There was no traffic on that frequency
in that area and so they had to wait until they came in
range of European amateurs. I asked the English radio-
amateur Pat Gowen (G3IOR) to give calls on 145.800 mc as
soon as MIR would come in range (at abt. 1934UTC). So he
did and these signals could be heard by John Blaha while
MIR was flying over France. He reported this to the
still being on EVA Korzun and Kaleri and congratulated
them with their success. Korzun urged John not to
transmit, but to listen only. The cosmonauts fully
accomplished their tasks: installing the truss
construction Rapana at the truss Ferma-3 and the
replacement of the Kurs-antenna on the outersurface of
the P.Kh.O. (transitionsection). John Blaha who stayed
inside the complex took care of the communications and
executed commands given to him by TsUP. He gave the
cosmonauts all possible moral and technical help. The
cosmonauts and Blaha did an excellent job during this
EVA, they gave an example of fruitful international
cooperation and so they all deserve a loud: 'MOLODTSY'
(very well done).
Of course the cosmonauts were very tired after the EVA
and back in the airlock they had to do hard labour to
put off their spacesuits.
Just before midnight Korzun could be heard in a contact
with a Portugese radio-amateur via the repaired antenne
for the 145 mc.

Thusfar there are no more EVA's on schedule for this
crew.
I hope this fills in the gaps, it was working much better tonight,
they must have found something else..

Bill: I do know of several schools where, during a particular
spaceflight, cable providers have added NASA Select to the choices,
but only temporarily. Give it a shot, but don't expect miracles.

I believe the local cable company (TCI) here in the Clear Lake area of
Houston (near Johnson Space Center) carries NASA TV (NASA Select is a
non-term....). It's been years since I was a subscriber, but back then,
they were just carrying it during missions. I have heard they are carrying
it 24 hours a day, now. But, I don't know that firsthand. I believe a lot
of people asked the cable company for it and TCI (then Storer Cable)
accomodated.

I suppose the same could happen with the DSS groups. Also, with local
cable companies, if enough of their subscribers request it. Having a few

school administrations backing the request might help, too.

Press for mission and non-mission airing of NASA TV. Might as well go all the way. Maybe it can be compromised down to mission coverage.

Good luck,

From: Rod Adkins <rod@mail.border.com>
Subject: RS-10 /RS-15 what are you using?

I am using up to 100w SSB with a J-pole ant for the uplink, & this is plenty for RS-10, but not good enough for RS-15 (steerable beam in progress).

I use a horizontal loop at about 25ft for 10m receive, & this works well for on RS-10, only ok for RS-15 on near-overhead passes. I find vertical antennas too noisy.

>Thanks in advance for any help.

Methinks a "C" band dish setup is required. I don't think the digital guys like Dish, USSB, Primestar, etc. are carrying NASA TV. For the "bird" and transponder, check a copy of Satellite Times.

From: Herb Perkins <wa2jrv@amsat.org>
Subject: PacSat for Offshore Sailing

Ken,

I may not be of much help but I have assisted W4AVO (George) put his station together. He is a live aboard and blue water sailor. Last year he was in the Bahamas and will be there again this year. He has been on UO22 and has used his station very succesfully. AF4N Wes and I have both put in a good bit of time getting his boat ready (all three of us are sailors). George just went off internet and will be on the air for the next six months. Wes and I will be on internet and can offer some suggestions.

The first point is that it is not difficult and even underway the system works just fine. However antenna placement is a problem. George uses one J pole for up link and a small yagi for down link (3 elements). He rotates it 180 degrees during the pass and has no difficulity going from the radio to the cockpit to make the change. Since UO22 is basically automated his computer does all the work.

He uses a 386 that is not fast and is just a work horse.

If I can be of help please contact me.

1. I have about 100ft of feedline
2. I know the J-pole is not properly tuned yet (it's igloo-time up here)
3. I am surrounded by apartment buildings
4. In my experience, & in my situation, low power & omni-antennas work only when the satellite is on a near-overhead pass, and the satellite is not busy. I have almost given up working weekends, due to being stomped on.
5. If you want to work passes other than overhead, then because of the path loss, there is no choice but to increase power &/or antenna gain.
6. I was trying to give this guy the confidence that with his TX set-up he darn well ought to be able to make contacts.

Subject: Mirage Preamps - WEB Pages ??

Hi All!

I've had the Mirage Preamps recommended to me for SAT usage as aparently
they have a gain of 25db and only 0.8db noise (??)

Can anyone tell me where I can get more details of these preamps, or even
if there is a WEB page from the manufacturer ???

Also, if you would recommend any other Preamp for the job!!

Thanks ...

>Reply: charlie@smarty.smart.net
>Thanks in advance for any help.

You would need a c band satellite dish and receiver. I would think a 7 foot
would be about the minimum to get great video. you might be able to get by
with a 6 foot if you live near the center of the U.S.

The satellite is over to the east - 69 degrees west or so.

The good news is that you can scrounge together a system pretty cheaply. Lots of people have old ones they aren't using anymore. You'd need a few bags of cement and a pole, some cable to run into the house. If you only want it for the one channel, this would be really easy and cheap to do.

I think it's going to move to a stronger satellite in the central arc sometime
fairly soon. The good news is the signal would be stronger. The bad news is that the new satellite would have others sats nearby, meaning the smaller your
dish the greater the crosstalk. If you live on the west coast, it may be kind of low on the horizon in it's present location. Let me know where you live and
I'll see if I can give you the particulars. Email me....

From: Guenter.Stautz@t-online.de (gs)
Subject: NoNo?:TrakBox, Ft736R and 23cm(P3D)

Hi All
after long nights with my TrakBox version 3.3h , I came to the conclusion, that TrakBox designers had never in mind to let it work on 23 cm with the Ft736R. ___Am I right ????___
The case: I'm a newcomer in the satellite operators community and I'm trying to prepare my rig for Phase 3D in spring 1997.
So I tried to program satellites with 23cm RX or TX channels. But this failed. My FT736R did not switch to 1296. Mhz, neither on RX nor TX.
The Ft736R is ok, because CAT programming directly via PC works.
I analysed the CAT commands from TrakBox to FT736R and found the following hex command sequences for a 70cm/23cm satellite example:
0,0,0,0,0,
C9,60,0,0,1E, This is a dummy switching to 1296Mhz done in the
0,0,0,0,80, Oct. 18 '92 update for TrakBox version 2.05
0,0,0,0,0,
43,21,0,0,2E, This is the Sat. TX Frequency __is ok__.
0,0,0,0,80,
0,0,0,0,0,
8,0,0,0,27, This is TX Mode
8,0,0,0,17, This is RX Mode
0,0,0,0,80,
0,0,0,0,0,
12,96,34,49,1E, And here is the problem: My assumed RX frequency
0,0,0,0,80, 1296.34491 Mhz is not properly set. It should be:
C9,63,44,91 and not 12,96,....., and the dummy
above should be set to 144Mhz
Any help??
Thanks and sorry for this long message.

From: "Erik Skovgaard" <Erik_Skovgaard@bc.sympatico.ca>
Subject: Best Ant for RS-10 Down Link

Brad,

I use a sloping dipole on 10 m to receive RS-10. It always has a very
strong signal here. I added a Hamtronics pre-amp recently and it does
boost the signal a few S units and also provides a bit of selectivity to
reject out-of-band signals.

For uplink I have used a 1/4 wave vertical and about 80 Watts. I only
tried CW since the amp was not linear, but I got very good reports.

RS-10 could use some activity, so go ahead. Hope to wrk u there.

Subject: FT290/790 9600 Bd mods?

Bob,

this is info about 9600 bps mods for FT290/790 from my acrhive.
I used it some time ago and it run well.
I hope it will be usefull for you.

MODEM @WW de:DL6DBN 23.09.90 07:50 0 1568 Bytes
FT290/790RII mods. PSK/9k6
*** Bulletin-ID: 229008DB0SGL ***

de DL6DBN @ DB0SGL

How to modify YAESU FT-290 RII and FT-790RII
for 1200 BpS PSK and 9600 BpS FSK

As you know, for 1200 BpS PSK/FM a direct injektion of the signal into the
FM-varicap is recommended and for 9600 BpS FSK necessary. For 9600 BpS you
will need the FM-discriminator output.

Due to SM-Technology the following modifications are not easy to manage.
FT-790RII in ()

The FM-discriminator output is at pin 9 of Q4001 (Q402) MC3357P. Use a
shielded cable to connect this pin with your 9k6-modem input. The IF-

bandwidth of CF01 (CF01) CFW455F seems to be to small for very good results, so I recommend to exchange it with a CFW455D. With good RF-strength and proper tuning the CFW455F can fit as well.

The more complicate modification is the injection point. Inject your TX-signal below the main unit where R30124, C30120 and C30126 (R30117, C30117 and C30124) come together (all SMD). Is it necessary to say, use a shielded cable? As long as no other AF from the tone unit or the microphon reaches this point you must not cut any connections. But adjust your FM-deviation.

I made this changes in both radio sets and had already good contacts via UoSAT-OSCAR 14. So good luck and success.

>Thanks de wa1vht

I'm kind of on the same quest. At least to figure out where to spend the
first $2K. Which I don't think is really cheap by most people's standards,
but which is a little bit less than what it takes to walk into HRO and
just do the whole thing brand new. My impression is that the guys who
are pretty serious about this seem to have the 726 or 736 and the KLM/M2
antenna set. Personally, I put a lot of confidence in conventional
wisdom. So, to go this way, the game seems to become, how to scrounge up
this kind of system. (Of course with preaamps, amplifiers and all that.)

Personally, my thinking now on how to do this in gradual, stages
is to do the antenna side first. New. At least deal with
the tracking, feedline and preamp issues. While finding a used 2M SSB radio.
Maybe working RS-10 , Mir or something, and then trying to hear sats on

440 Mhz with converters. (Not sure if 440->28mHZ or 440->144Mhz is better?)

By then, I figure a few months will have passed, I'll be able to hear what's going on, and either I'll be anxious to be rid of the whole thing or I'll be lusting after a, probably used, 726/736. By then, I figure we'll know whether P3d is going to be really cool, etc. Fingers crossed.

From: "Roger E. Koss" <kossr@edl1.ksc.nasa.gov>
Subject: Best Ant for RS-10 Down Link

Brad:
I'm using a dipole cut for 10 meters, up only about 15 feet, and it
works just fine into a Uniden HR2600. For my uplink, I have a 5/8 wave
homebrew groundplane up 30', which I feed with 25 watts from a Yaesu
FT-290R Mk II. RS-10 has a very sensitive receiver and an excellent
transmitter. Much more than this would be overkill. Hope to work you on
the birds someday.

From: ashleyb@ohsu.edu
Subject: Best Ant for RS-10 Down Link

To The Group:

I'm in the process of setting up a satelite system. A few local guys
are having fun with RS-10. What I would like to do is to set up a nice
beginners station. I currently have a IC-275A with a GP-3 for the Up link
and two different HF xcvr's to set up the down link. My question is would
an HF vertical like the Ringo ranger AR-10 work or maybe an inverted V
dipole. I am reading the ARRL satelite handbook but I'd like to hear from
some people actually working the birds. Also should I get a pre-amp and if
so does anyone have any recommendations ie buy,build?? Thanks for your
help.

RS-10 has a very strong downlink for an amatuer satellite. I put up a
Ringo, but can honestly say that it didn't offer any better performance
than a simple dipole.

Try orienting the dipole for best north/south reception. Don't worry
about a pre-amp. I used a Radio Shack 10m rig to listen to my
downlinks.

From: river@venus.net (Jonathan Rhodes)
Subject: free money

Oh! My? $$$$
THIS IS THE FAIREST MOST HONEST WAY I KNOW TO SHARE THE WEALTH! Hello! (Save this file now...it will save you some time typing later if you decide to try this)
Would you like to make thousands of dollars, quick, legally, with NO CATCH? Then keep reading....please take five minutes to read this article it will change your life, just like it did mine. It's true! You can make up to or over $50,000 dollars in 4-6 weeks, maybe sooner! I SWEAR I'M NOT LYING TO YOU, AND THIS IS NOT A SCAM! If you're intrested, keep reading; if you're not, I apologize for wasting your time.
Here we go. A little while back, I was browsing through these newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars in weeks with only an initial investment of $5! So, I thought, "Yeah, right, must be a scam", but I was curious, like most of us , so I kept reading. Anyway, it
said that you send $1 to each of the 5 names and addresses stated in the article. You then place your own name and address in the article at the bottom of the list at #5, and post the article in at least 200 newsgroups (there are thousands). No catch, that was it!
So after thinking it over, talking to a few people first, I tried it. I figured what have I got to lose except for 5 stamps and $5, right? Well, guess what...within 7 days, I started getting money in the mail! I was shocked! I still figured it would end soon, and didn't give it another thought. But then money kept coming IN, tripling in size and multiplying by 10-20 times the amount that I got the first week! In my first week I made about 20 to 30 dollars. But by the end of the second week, I had made a total of over $1,000!!!! In the third week, I had over $10,000 dollars, and it's still growing. This is my fourth week (Oct 11) and I've made about $42,000 TOTAL, and the money is still coming in.....

Let me tell you how this works and most importantly, WHY it works...also, make sure you print a copy of the article NOW, so you get the information off of it, and begin making money.

The process is very simple, and it consists of 3 EASY steps:

STEP 1: Get 5 seperate pieces of paper and write the following on each sheet of paper..."PLEASE PUT ME ON YOUR MAILING LIST. YOU ARE NUMBER 5." (etc. to number 1) Get five $1 bills and place ONE inside each piece of paper that
you just wrote on, and fold each piece of paper so the bill will not be seen in the envelope (otherwise, nosey people who like to steal envelopes with money in it will get yours). Put one paper inside the envelope and seal it. Do the same for all 5. You should now have 5 envelopes sealed, EACH have a piece of paper AND a $1 bill stuffed inside of the paper. Make sure those words that were stated above are stated on each paper. What you are doing is creating a service by this, this is PERFECTLY LEGAL. Now then, mail the 5 envelopes with the paper and $1 in each to the following 5 addresses:

1. P.DEBOUZY, 9 rue des Lavandieres, 78530 BUC, FRANCE.
2. J. MAHON, 750 Highland Dr. Apt. #210, Ojai, Calif. 930234.
3. P. Rae, 209 Oak Butte CT., Folsom. California. 95630. USA5.
4. M. Rapp, 801 Mockingbird Ct., Hinesville, GA 31313 USA
5. J. Rhodes, 5011 Stoneview Dr., Charlestown, IN 47111

STEP 2: Now take the #1 name off the list that you see above, move the other 4 names up (5 becoming 4, 4 becoming 3, ect.) and put YOUR NAME as number 5 on the list. You can slightly alter this article if you need to, editing what you need to edit.

STEP 3: Post your amended article (with your name at #5) to at least 200 news groups (I think there are close to 18,000 of them). All you need is say, at least 200. HOW TO DO THIS: If you have Netscape 3.0 do EXACTLY the following:

1) Click on any news group like normal, THEN click on 'TO NEWS', which is on the far left when you're in the newsgroups page. This will bring up a box to type a message in.

2) Leave the newsgroup box like it is, CHANGE the subject box to something flashy, like, "NEED CASH $$$ READ HERE $$$" or "FAST CASH"!!!

3) Tab once and you should be ready to type. Now, retype (only once) THIS whole article WORD FOR WORD, except to insert your name at #5, and to remove #1 off the list, plus any other small changes you think you need to make. Keep almost all of it the SAME!

4) When you're done typing the WHOLE article, click on FILE in THIS BOX, RIGHT ABOUVE SEND, NOT WHERE IT SAYS NETSCAPE NEWS ON THE FIRST BOX. Click on SAVE AS when you're under FILE. Save you artcle as a text file to your C: or A: drive. DO NOT SEND OR POST YOUR ARTICLE UNTIL YOU DO THIS. Once saved, move on to number 5 below.

5) If you still have all of your text, send or post to this newsgroup now by just clicking send, which is right below FILE, and right above Cc: .

6)Here's where you're going to post all 200. OK, click on any news group then click on 'TO NEWS', again in the top left corner. Leave the NEWSGROUPS BOX alone again, put a flashy subject title in the SUBJECT BOX, hit TAB once you're in the body of the message, and then click on ATTACHMENTS, which is below the SUBJECT BOX. You will get another box to come up. Click on ATTACH FILE, then find YOUR file that you saved; click once on the file, and then click OPEN' now click on OK; if you did this right, you should see your file name in the attachments box, and it will be shaded green.

IF YOU USE IE EXPLORER IT'S JUST AS EASY...HOLDING DOWN THE LEFT MOUSE BUTTON, HIGHLIGHT THIS ARTICLE. THEN PRESS THE "CRTL" KEY AND THE "C" KEY AT THE SAME TIME TO COPY THIS ARTICLE. THEN PRINT THIS ARTICLE FOR YOUR RECORDS TO HAVE THE NAMES OF THOSE YOU WILL BE SENDING $1 BILLS TO. NEXT GO TO THE NEWS GROUPS AND PRESS "POST AN ARTICLE" A WINDOW WILL OPEN. TYPE IN YOUR HEADLINE IN THE SUBJECT AREA AND THEN CLICK IN THE LARGE WINDOW BELOW. PRESS "CRTL" AND THEN "V" AND THE ARTICLE WILL BE PLACED IN THE WINDOW. IF YOU WANT TO EDIT THE ARTICLE, DO SO AND THEN HIGHLIGHT AND COPY IT AGAIN. NOW EVERYTIME YOU POST THE ARTICLE

IN
A NEW NEWSGROUP ALL YOU HAVE TO REPEAT "CTRL" AND "V" AND PRESS POST.

7)That's it. Each time you do this, all you have to do is type in a different newsgroup, so that way, it posts to 200 DIFFERENT newsgroups, you see? Now you just have 199 to go!! (Don't worry, each one takes about 30 seconds, once you get used to it) REMEMBER 200 IS THE MINIMUM. The more you post the more money you will make.

AND THAT'S IT!!! THAT'S THE ONLY 3 STEPS THERE IS!!!

You are now in the mail order business and will start recieving your $1 envelopes from various people all over the world within days. HINT THE MORE NEWSGROUPS YOU POST TO, THE MORE MONEY YOU WILL MAKE. You may want to rent a PO Box eventually because of all the mail. If you wish to stay anonymous, you can come up with a name, such as "manager" or "investor". Just make sure all the addresses are CORRECT, please.

LET ME TELL YOU WHY THIS SYSTEM WORK!!!!

Out of every 200 postings, let's say I ONLY recieve 5 replies, which is actually VERY LOW. So I made 5 dollars with my name at #5. Now then, each person who just sent me $1 makes, say only 200 postings, now with your name at number 4, WHICH IS A TOTAL OF 1000 POSTINGS, not including yours too. 50 people send you $1 now; thats $50 you just made! Now, then your new 50 agents post 200 each with YOUR NAME AT NUMBER 3, OR 10,000 POSTING (50x200). Average return is 500 at $1 each is $500. They make 200 postings, which is 5,000 returns at $1 each, which is $5000 dollars! And finally, 5000 people make 200 postings wach with YOUR NAME AT NUMBER 1. YOU NOW GET A RETURN OF $50,000 BEFORE YOUR NAME

DROPS OFF THE LIST. AND THAT'S IF EVERYONE MAKES 200 POSTINGS ONLY,
AND IF ONLY 5 PERSONS RESPOND!!!!!
When your name is no longer on the list, you just take the latest
posting that is appearing in the newsgroups, and SEND OUT ANOTHER $5 TO
THE NAMES ON THE LIST, PUTTING YOUR NAME AT 5 AGAIN. And start posting
again. The thing to remember is, do you realize that THOUSANDS OF
PEOPLE ALL OVER THE WORLD ARE JOINING THE INTERNET AND READING THESE
ARTICLES EVERY DAY, JUST LIKE YOU ARE RIGHT NOW!!! So can afford $5
dollars and see if it really works? I think so.....
People have said, "What if the plan is played out and no one
sends you
the money?" So what! What are the chances of that happening when there
are TONS OF NEW HONEST USERS AND NEW HONEST PEOPLE who are joining the
Internet and newsgroups everyday and are willing to give it a try?
Estimates are at 20,000 to 50,000 new users, every day, with THOUSANDS
of those joing the actual Internet. Remember, play FAIRLY and HONESTLY
and this WILL WORK, I PROMISE YOU!!! You just have to be honest. Make
sure you print this article out RIGHT NOW, also, try to keep a list of
everyone that sends you money and always keep an eye on the mnewsgroups
to make sure everyone is playing fairly. REMEMBER, HONESTY IS THE BEST
POLICY. YOU DON'T NEED TO CHEAT THE BASIC IDEA TO MAKE MONEY!! GOOD
LUCK TO ALL AND PLEASE PLAY FAIRLY AND YOU WILL REAP THE HUGE REWARDS
FROM THIS, WHICH IS TONS OF EXTRA CASH!!!
**By the way, if you try to decieve people by posting the

messages with
your name on the list and not sending the money to the people already

on
the list, you will not get much. Someone I talKed to knew someone who
did that and he only made $150 dollars, and that's AFTER seven or eight
weeks! Then he sent the 5 $1 bills, people added him to their lists,
and in 4-5 weeks, he had over $10K.
THIS IS THE FAIREST AND MOST HONEST WAY I HAVE EVER SEEN TO SHARE THE
WEALTH OF THE WORLD WITHOUT COSTING ANYTHING BUT OUR TIME!!!

Subject: Looking for equipment selection advice Yaesu vs Icom vs Kenwood for satellite

Hi,
I am interested in getting a new radio for P3D. The 736 seems to be the historical favorite but there are new radios from Kenwood and Icom. Has anyone compared the features or performance? Do the Kenwood or Icom radios have the same special satellite oriented features that the Yaesu 736 has? If you were going to buy one which one would you choose and why?

I am planning to operate on 1.2 GHz in addition to 2 and 440.

I would also be interested to know what you would recommend for 2.3 GHz.

Thanks very much for you advice in advance.

Hi just a quick note-- the Two meter antenna was broken on the first EVA and they did a second EVA today and did a makeshift repair which will work, but the signal will not be as strong or as steady as before.. but it will work for the time being, they will fix the coax and on the next planned EVA make the proper repair.. I have no idea when that will be.. 73 DAVE N1PPP

What's the chance of getting DirecTV or USSB to carry NASA Select if we
all wrote or called? Anyone have any inside info on these DSS providers?

From: kwalker@qb.island.net (Ken Walker)
Subject: PacSat for Offshore Sailing

I have not followed the development of the packet capable amateur satellites
but I believe there are some in operation. As a sometimes off shore sailor
and a radio amateur, I am asked by fellow sailors whether they should get a
ham licence and how effective it would be. I tell them about 20m ssb, about
hf packet and amtor but I also go on about how low earth store and forward
packet satellites will be available one day. But maybe they are now?

The ideal packet system for offshore use would allow the offshore sailing ham
to prepare a packet message and the software would determine when a bird is
overhead and send up the message and pick up any waiting mail. Are these
birds ready to do this? Is there software that would do it? Am I right that
these can be worked with small omni antennas?

I think they require dual band operation? Which bands? Hopefully they are
bands that can be worked with readily available dual band mobile rigs?

I have thought about this from time to time but I am not up to date on what is
available. Anyone want to try to update me??

Thanks.

Subject: RS-10 /RS-15 what are you using?

Greetings all,
this post is a call for information. I am trying to setup a satellite
station
for my grandfather, (a 78 YO ham..kb2wfn) and I figured that you all could
help me.
What equipment are you all using for up / downlink radios..
, antennas? The operating budget is around $600.00 but if your system cost
more than that feel free to tell me about it. I just wanted to get an idea
of
what everyone was using.

I've used a IC251A with 10 watts into a Jpole, and a beat-up Undien 2510
fed with a 100 foot long dipole. No problem working ssb or CW on RS-10,
CW only on RS15.

When I added a Hamtronics downconverter for 70cm, I could work FO-20
quite often as well.

From: (null)

Kurt, when I wrote my routines for FT736R CAT (published on this
BBS) I discovered that Yaesu did a great job and introduced only 2
bugs.

One was that if the radio is in (say ) 2m RX /70cm TX, then the CAT cannot
change it to 70cm RX /2m TX! This is because you have to make the
changes in two stages, e.g. 2/70 -> 2/2 -> 70/2.

Obviously the middle step is inadmissable. If your radio has a third
module (e.g.
23cm), then you can go 2/70 -> 23/70 -> 23/2 -> 70/2.

The other bug concerns reading the s-meter and squelch. This
sometimes misses the last byte.

So your problem is not a fault of the tracker-box code.

Subject: Mir's EVA

from Chris Van deBerg
MIRNEWS 10 DECEMBER 1996 (338)

2d Spacewalk (EVA) 22d Mainexpedition (ME) MIR:

This EVA took place on 9.12.1996 between 1352UTC (opening hatch) and 2028UTC (closing hatch). So a duration of 6 hrs 36 mins. The EVA lasted longer for Korzun wished to accomplish all what had to be done and there also was a problem with something which bungled loose. Before return they restored the connection of the radio-amateurantenne for the 145 mc. Probably this antenne had been disconnected by accident during the 1st EVA. They connected the antenna again and while they were flying over Chile and Brasil they asked John Blaha to listen out on the 145.800 mc to check whether the antenne was working or not. There was no traffic on that frequency in that area and so they had to wait until they came in range of European amateurs. I asked the English radio-amateur Pat Gowen (G3IOR) to give calls on 145.800 mc as soon as MIR would come in range (at abt. 1934UTC). So he did and these signals could be heard by John Blaha while MIR was flying over France. He reported this to the still being on EVA Korzun and Kaleri and congratulated them with their success. Korzun urged John not to transmit, but to listen only. The cosmonauts fully accomplished their tasks: installing the truss construction Rapana at the truss Ferma-3 and the replacement of the Kurs-antenna on the outersurface of the P.Kh.O. (transitionsection). John Blaha who stayed inside the complex took care of the communications and executed commands given to him by TsUP. He gave the cosmonauts all possible moral and technical help. The cosmonauts and Blaha did an excellent job during this EVA, they gave an example of fruitful international cooperation and so they all deserve a loud: 'MOLODTSY' (very well done).
Of course the cosmonauts were very tired after the EVA

and back in the airlock they had to do hard labour to
put off their spacesuits.
Just before midnight Korzun could be heard in a contact
with a Portugese radio-amateur via the repaired antenne
for the 145 mc.

Thusfar there are no more EVA's on schedule for this
crew.
I hope this fills in the gaps, it was working much better tonight,
they must have found something else..

I believe the local cable company (TCI) here in the Clear Lake area of Houston (near Johnson Space Center) carries NASA TV (NASA Select is a non-term....). It's been years since I was a subscriber, but back then, they were just carrying it during missions. I have heard they are carrying it 24 hours a day, now. But, I don't know that firsthand. I believe a lot of people asked the cable company for it and TCI (then Storer Cable) accomodated.

I suppose the same could happen with the DSS groups. Also, with local cable companies, if enough of their subscribers request it. Having a few school administrations backing the request might help, too.

Press for mission and non-mission airing of NASA TV. Might as well go all the way. Maybe it can be compromised down to mission coverage.

Good luck,

From: Rod Adkins <rod@mail.border.com>

Subject: RS-10 /RS-15 what are you using?

I am using up to 100w SSB with a J-pole ant for the uplink, & this is plenty for RS-10, but not good enough for RS-15 (steerable beam in progress).

I use a horizontal loop at about 25ft for 10m receive, & this works well for on RS-10, only ok for RS-15 on near-overhead passes. I find vertical antennas too noisy.

Methinks a "C" band dish setup is required. I don't think the digital
guys like Dish, USSB, Primestar, etc. are carrying NASA TV. For the
"bird" and transponder, check a copy of Satellite Times.

From: Herb Perkins <wa2jrv@amsat.org>
Subject: PacSat for Offshore Sailing

Ken,

I may not be of much help but I have assisted W4AVO (George) put his station together. He is a live aboard and blue water sailor. Last year he was in the Bahamas and will be there again this year. He has been on UO22 and has used his station very succesfully. AF4N Wes and I have both put in a good bit of time getting his boat ready (all three of us are sailors). George just went off internet and will be on the air for the next six months. Wes and I will be on internet and can offer some suggestions.

The first point is that it is not difficult and even underway the system works just fine. However antenna placement is a problem. George uses one J pole for up link and a small yagi for down link (3 elements). He rotates it 180 degrees during the pass and has no difficulity going from the radio to the cockpit to make the change. Since UO22 is basically automated his computer does all the work.

He uses a 386 that is not fast and is just a work horse.

If I can be of help please contact me.

1. I have about 100ft of feedline
2. I know the J-pole is not properly tuned yet (it's igloo-time up here)
3. I am surrounded by apartment buildings
4. In my experience, & in my situation, low power & omni-antennas work only when the satellite is on a near-overhead pass, and the satellite is not busy. I have almost given up working weekends, due to being stomped on.

5. If you want to work passes other than overhead, then because of the
path loss, there is no choice but to increase power &/or antenna gain.
6. I was trying to give this guy the confidence that with his TX set-up
he darn well ought to be able to make contacts.

Subject: Mirage Preamps - WEB Pages ??

Hi All!

I've had the Mirage Preamps recommended to me for SAT usage as aparently
they have a gain of 25db and only 0.8db noise (??)

Can anyone tell me where I can get more details of these preamps, or even
if there is a WEB page from the manufacturer ???

Also, if you would recommend any other Preamp for the job!!

Thanks ...

I'm kind of on the same quest. At least to figure out where to spend the
first $2K. Which I don't think is really cheap by most people's standards,
but which is a little bit less than what it takes to walk into HRO and
just do the whole thing brand new. My impression is that the guys who
are pretty serious about this seem to have the 726 or 736 and the KLM/M2
antenna set. Personally, I put a lot of confidence in conventional
wisdom. So, to go this way, the game seems to become, how to scrounge up
this kind of system. (Of course with preaamps, amplifiers and all that.)

Personally, my thinking now on how to do this in gradual, stages
is to do the antenna side first. New. At least deal with
the tracking, feedline and preamp issues. While finding a used 2M SSB radio.
Maybe working RS-10 , Mir or something, and then trying to hear sats on
440 Mhz with converters. (Not sure if 440->28mHZ or 440->144Mhz is better?)

By then, I figure a few months will have passed, I'll be able to hear
what's going on, and either I'll be anxious to be rid of the whole thing
or I'll be lusting after a, probably used, 726/736. By then, I figure we'll
know whether P3d is going to be really cool, etc. Fingers crossed.

Subject: Best Ant for RS-10 Down Link

Brad:
I'm using a dipole cut for 10 meters, up only about 15 feet, and it works just fine into a Uniden HR2600. For my uplink, I have a 5/8 wave homebrew groundplane up 30', which I feed with 25 watts from a Yaesu FT-290R Mk II. RS-10 has a very sensitive receiver and an excellent transmitter. Much more than this would be overkill. Hope to work you on the birds someday.

From: ashleyb@ohsu.edu
Subject: Best Ant for RS-10 Down Link

To The Group:

I'm in the process of setting up a satelite system. A few local guys
are having fun with RS-10. What I would like to do is to set up a nice
beginners station. I currently have a IC-275A with a GP-3 for the Up link
and two different HF xcvr's to set up the down link. My question is would

an HF vertical like the Ringo ranger AR-10 work or maybe an inverted V dipole. I am reading the ARRL satelite handbook but I'd like to hear from some people actually working the birds. Also should I get a pre-amp and if so does anyone have any recommendations ie buy,build?? Thanks for your help.

RS-10 has a very strong downlink for an amatuer satellite. I put up a Ringo, but can honestly say that it didn't offer any better performance than a simple dipole.

Try orienting the dipole for best north/south reception. Don't worry about a pre-amp. I used a Radio Shack 10m rig to listen to my downlinks.

Subject: free money

Oh! My? $$$$
THIS IS THE FAIREST MOST HONEST WAY I KNOW TO SHARE THE WEALTH! Hello!
(Save this file now...it will save you some time typing later if you
decide to try this)
Would you like to make thousands of dollars, quick, legally, with NO
CATCH? Then keep reading....please take five minutes to read this
article it will change your life, just like it did mine. It's true!
You can make up to or over $50,000 dollars in 4-6 weeks, maybe sooner!
I SWEAR I'M NOT LYING TO YOU, AND THIS IS NOT A SCAM! If you're
intrested, keep reading; if you're not, I apologize for wasting your
time.
Here we go. A little while back, I was browsing through these
newsgroups, just like you are now, and came across an article similar to
this that said you could make thousands of dollars in weeks with only
an initial investment of $5! So, I thought, "Yeah, right, must be a
scam", but I was curious, like most of us , so I kept reading. Anyway,
it
said that you send $1 to each of the 5 names and addresses stated in the
article. You then place your own name and address in the article at
the bottom of the list at #5, and post the article in at least 200
newsgroups (there are thousands). No catch, that was it!
So after thinking it over, talking to a few people first, I tried it.
I figured what have I got to lose except for 5 stamps and $5, right?
Well, guess what...within 7 days, I started getting money in the mail!
I was shocked! I still figured it would end soon, and didn't give it
another thought. But then money kept coming IN, tripling in size and
multiplying by 10-20 times the amount that I got the first week! In my
first week I made about 20 to 30 dollars. But by the end of the second
week, I had made a total of over $1,000!!!! In the third week, I had
over $10,000 dollars, and it's still growing. This is my fourth week
(Oct 11) and I've made about $42,000 TOTAL, and the money is still
coming in.....
Let me tell you how this works and most importantly, WHY it
works...also, make sure you print a copy of the article NOW, so you get
the information off of it, and begin making money.

The process is very simple, and it consists of 3 EASY steps:

STEP 1: Get 5 seperate pieces of paper and write the following on each
sheet of paper..."PLEASE PUT ME ON YOUR MAILING LIST. YOU ARE NUMBER
5." (etc. to number 1) Get five $1 bills and place ONE inside each piece
of paper that
you just wrote on, and fold each piece of paper so the bill will not be
seen in the envelope (otherwise, nosey people who like to steal envelopes
with money in it will get yours). Put one paper inside the envelope
and seal it. Do the same for all 5. You should now have 5 envelopes
sealed, EACH have a piece of paper AND a $1 bill stuffed inside of the
paper. Make sure those words that were stated above are stated on each

paper. What you are doing is creating a service by this, this is PERFECTLY LEGAL. Now then, mail the 5 envelopes with the paper and $1 in each to the following 5 addresses:

1. P.DEBOUZY, 9 rue des Lavandieres, 78530 BUC, FRANCE.
2. J. MAHON, 750 Highland Dr. Apt. #210, Ojai, Calif. 930234.
3. P. Rae, 209 Oak Butte CT., Folsom. California. 95630. USA5.
4. M. Rapp, 801 Mockingbird Ct., Hinesville, GA 31313 USA
5. J. Rhodes, 5011 Stoneview Dr., Charlestown, IN 47111

STEP 2: Now take the #1 name off the list that you see above, move the other 4 names up (5 becoming 4, 4 becoming 3, ect.) and put YOUR NAME as number 5 on the list. You can slightly alter this article if you need to, editing what you need to edit.

STEP 3: Post your amended article (with your name at #5) to at least 200 news groups (I think there are close to 18,000 of them). All you need is say, at least 200. HOW TO DO THIS: If you have Netscape 3.0 do EXACTLY the following:

1) Click on any news group like normal, THEN click on 'TO NEWS', which is on the far left when you're in the newsgroups page. This will bring up a box to type a message in.

2) Leave the newsgroup box like it is, CHANGE the subject box to something flashy, like, "NEED CASH $$$ READ HERE $$$" or "FAST CASH"!!!

3) Tab once and you should be ready to type. Now, retype (only once) THIS whole article WORD FOR WORD, except to insert your name at #5, and to remove #1 off the list, plus any other small changes you think you need to make. Keep almost all of it the SAME!

4) When you're done typing the WHOLE article, click on FILE in THIS BOX, RIGHT ABOUVE SEND, NOT WHERE IT SAYS NETSCAPE NEWS ON THE FIRST BOX. Click on SAVE AS when you're under FILE. Save you artcle as a text file to your C: or A: drive. DO NOT SEND OR POST YOUR ARTICLE UNTIL YOU DO THIS. Once saved, move on to number 5 below.

5) If you still have all of your text, send or post to this newsgroup now by just clicking send, which is right below FILE, and right above Cc: .

6)Here's where you're going to post all 200. OK, click on any news group then click on 'TO NEWS', again in the top left corner. Leave the NEWSGROUPS BOX alone again, put a flashy subject title in the SUBJECT BOX, hit TAB once you're in the body of the message, and then click on ATTACHMENTS, which is below the SUBJECT BOX. You will get another box to come up. Click on ATTACH FILE, then find YOUR file that you saved; click once on the file, and then click OPEN' now click on OK; if you did this right, you should see your file name in the attachments box, and it will be shaded green.

IF YOU USE IE EXPLORER IT'S JUST AS EASY...HOLDING DOWN THE LEFT MOUSE BUTTON, HIGHLIGHT THIS ARTICLE. THEN PRESS THE "CRTL" KEY AND THE "C" KEY AT THE SAME TIME TO COPY THIS ARTICLE. THEN PRINT THIS ARTICLE FOR YOUR RECORDS TO HAVE THE NAMES OF THOSE YOU WILL BE SENDING $1 BILLS TO. NEXT GO TO THE NEWS GROUPS AND PRESS "POST AN ARTICLE" A WINDOW WILL OPEN. TYPE IN YOUR HEADLINE IN THE SUBJECT AREA AND THEN CLICK IN THE LARGE WINDOW BELOW. PRESS "CRTL" AND THEN "V" AND THE ARTICLE WILL BE PLACED IN THE WINDOW. IF YOU WANT TO EDIT THE ARTICLE, DO SO AND THEN HIGHLIGHT AND COPY IT AGAIN. NOW EVERYTIME YOU POST THE ARTICLE

IN
A NEW NEWSGROUP ALL YOU HAVE TO REPEAT "CTRL" AND "V" AND PRESS POST.

7)That's it. Each time you do this, all you have to do is type in a different newsgroup, so that way, it posts to 200 DIFFERENT newsgroups, you see? Now you just have 199 to go!! (Don't worry, each one takes about 30 seconds, once you get used to it) REMEMBER 200 IS THE MINIMUM. The more you post the more money you will make.

AND THAT'S IT!!! THAT'S THE ONLY 3 STEPS THERE IS!!!

You are now in the mail order business and will start recieving your $1 envelopes from various people all over the world within days. HINT THE MORE NEWSGROUPS YOU POST TO, THE MORE MONEY YOU WILL MAKE. You may want to rent a PO Box eventually because of all the mail. If you wish to stay anonymous, you can come up with a name, such as "manager" or "investor". Just make sure all the addresses are CORRECT, please.

LET ME TELL YOU WHY THIS SYSTEM WORK!!!!

Out of every 200 postings, let's say I ONLY recieve 5 replies, which is actually VERY LOW. So I made 5 dollars with my name at #5. Now then, each person who just sent me $1 makes, say only 200 postings, now with your name at number 4, WHICH IS A TOTAL OF 1000 POSTINGS, not including yours too. 50 people send you $1 now; thats $50 you just made! Now, then your new 50 agents post 200 each with YOUR NAME AT NUMBER 3, OR 10,000 POSTING (50x200). Average return is 500 at $1 each is $500. They make 200 postings, which is 5,000 returns at $1 each, which is $5000 dollars! And finally, 5000 people make 200 postings wach with YOUR NAME AT NUMBER 1. YOU NOW GET A RETURN OF $50,000 BEFORE YOUR NAME DROPS OFF THE LIST. AND THAT'S IF EVERYONE MAKES 200 POSTINGS ONLY, AND IF ONLY 5 PERSONS RESPOND!!!!!
When your name is no longer on the list, you just take the latest posting that is appearing in the newsgroups, and SEND OUT ANOTHER $5 TO THE NAMES ON THE LIST, PUTTING YOUR NAME AT 5 AGAIN. And start posting again. The thing to remember is, do you realize that THOUSANDS OF PEOPLE ALL OVER THE WORLD ARE JOINING THE INTERNET AND READING THESE ARTICLES EVERY DAY, JUST LIKE YOU ARE RIGHT NOW!!! So can afford $5 dollars and see if it really works? I think so.....
People have said, "What if the plan is played out and no one
sends you
the money?" So what! What are the chances of that happening when there are TONS OF NEW HONEST USERS AND NEW HONEST PEOPLE who are joining the

Internet and newsgroups everyday and are willing to give it a try?
Estimates are at 20,000 to 50,000 new users, every day, with THOUSANDS
of those joing the actual Internet. Remember, play FAIRLY and HONESTLY
and this WILL WORK, I PROMISE YOU!!! You just have to be honest. Make
sure you print this article out RIGHT NOW, also, try to keep a list of
everyone that sends you money and always keep an eye on the mnewsgroups
to make sure everyone is playing fairly. REMEMBER, HONESTY IS THE BEST
POLICY. YOU DON'T NEED TO CHEAT THE BASIC IDEA TO MAKE MONEY!! GOOD
LUCK TO ALL AND PLEASE PLAY FAIRLY AND YOU WILL REAP THE HUGE REWARDS
FROM THIS, WHICH IS TONS OF EXTRA CASH!!!
**By the way, if you try to decieve people by posting the

messages with
your name on the list and not sending the money to the people already

on
the list, you will not get much. Someone I talKed to knew someone who
did that and he only made $150 dollars, and that's AFTER seven or eight
weeks! Then he sent the 5 $1 bills, people added him to their lists,
and in 4-5 weeks, he had over $10K.
THIS IS THE FAIREST AND MOST HONEST WAY I HAVE EVER SEEN TO SHARE THE
WEALTH OF THE WORLD WITHOUT COSTING ANYTHING BUT OUR TIME!!!

Subject: Looking for equipment selection advice Yaesu vs Icom vs Kenwood for satellite

Hi,
I am interested in getting a new radio for P3D. The 736 seems to be the historical favorite but there are new radios from Kenwood and Icom. Has anyone compared the features or performance? Do the Kenwood or Icom radios have the same special satellite oriented features that the Yaesu 736 has? If you were going to buy one which one would you choose and why?

I am planning to operate on 1.2 GHz in addition to 2 and 440.

I would also be interested to know what you would recommend for 2.3 GHz.

Thanks very much for you advice in advance.

Hi just a quick note-- the Two meter antenna was broken on the first EVA and they did a second EVA today and did a makeshift repair which will work, but the signal will not be as strong or as steady as before.. but it will work for the time being, they will fix the coax and on the next planned EVA make the proper repair.. I have no idea when that will be.. 73 DAVE N1PPP

From: kwalker@qb.island.net (Ken Walker)
Subject: PacSat for Offshore Sailing

I have not followed the development of the packet capable amateur satellites
but I believe there are some in operation. As a sometimes off shore sailor
and a radio amateur, I am asked by fellow sailors whether they should get a
ham licence and how effective it would be. I tell them about 20m ssb, about
hf packet and amtor but I also go on about how low earth store and forward
packet satellites will be available one day. But maybe they are now?

The ideal packet system for offshore use would allow the offshore sailing ham
to prepare a packet message and the software would determine when a bird is
overhead and send up the message and pick up any waiting mail. Are these

birds ready to do this? Is there software that would do it? Am I right that these can be worked with small omni antennas?

I think they require dual band operation? Which bands? Hopefully they are bands that can be worked with readily available dual band mobile rigs?

I have thought about this from time to time but I am not up to date on what is available. Anyone want to try to update me??

Thanks.

Subject: RS-10 /RS-15 what are you using?

Greetings all,
this post is a call for information. I am trying to setup a satellite station
for my grandfather, (a 78 YO ham..kb2wfn) and I figured that you all could help me.
What equipment are you all using for up / downlink radios..
, antennas? The operating budget is around $600.00 but if your system cost more than that feel free to tell me about it. I just wanted to get an idea of
what everyone was using.

73's Jason N1RWY

UP: Kenwood TR9130 8 watts 5/8 colinear // 3ele beam both @ 15 feet.

I've used a IC251A with 10 watts into a Jpole, and a beat-up Undien 2510
fed with a 100 foot long dipole. No problem working ssb or CW on RS-10,
CW only on RS15.

When I added a Hamtronics downconverter for 70cm, I could work FO-20
quite often as well.

From: (null)

Kurt, when I wrote my routines for FT736R CAT (published on this
BBS) I discovered that Yaesu did a great job and introduced only 2
bugs.

One was that if the radio is in (say ) 2m RX /70cm TX, then the CAT cannot
change it to 70cm RX /2m TX! This is because you have to make the
changes in two stages, e.g. 2/70 -> 2/2 -> 70/2.

Obviously the middle step is inadmissable. If your radio has a third
module (e.g.
23cm), then you can go 2/70 -> 23/70 -> 23/2 -> 70/2.

The other bug concerns reading the s-meter and squelch. This
sometimes misses the last byte.

So your problem is not a fault of the tracker-box code.

Subject: Mir's EVA

from Chris Van deBerg
MIRNEWS 10 DECEMBER 1996 (338)

2d Spacewalk (EVA) 22d Mainexpedition (ME) MIR:

This EVA took place on 9.12.1996 between 1352UTC (opening hatch) and 2028UTC (closing hatch). So a duration of 6 hrs 36 mins. The EVA lasted longer for Korzun wished to accomplish all what had to be done and there also was a problem with something which bungled loose. Before return they restored the connection of the radio-amateurantenne for the 145 mc. Probably this antenne had been disconnected by accident during the 1st EVA. They connected the antenna again and while they were flying over Chile and Brasil they asked John Blaha to listen out on the 145.800 mc to check whether the antenne was working or not. There was no traffic on that frequency in that area and so they had to wait until they came in range of European amateurs. I asked the English radio-amateur Pat Gowen (G3IOR) to give calls on 145.800 mc as soon as MIR would come in range (at abt. 1934UTC). So he did and these signals could be heard by John Blaha while MIR was flying over France. He reported this to the still being on EVA Korzun and Kaleri and congratulated them with their success. Korzun urged John not to transmit, but to listen only. The cosmonauts fully accomplished their tasks: installing the truss construction Rapana at the truss Ferma-3 and the replacement of the Kurs-antenna on the outersurface of the P.Kh.O. (transitionsection). John Blaha who stayed inside the complex took care of the communications and executed commands given to him by TsUP. He gave the cosmonauts all possible moral and technical help. The cosmonauts and Blaha did an excellent job during this EVA, they gave an example of fruitful international cooperation and so they all deserve a loud: 'MOLODTSY' (very well done).
Of course the cosmonauts were very tired after the EVA and back in the airlock they had to do hard labour to put off their spacesuits.
Just before midnight Korzun could be heard in a contact with a Portugese radio-amateur via the repaired antenne for the 145 mc.

Thusfar there are no more EVA's on schedule for this crew.
I hope this fills in the gaps, it was working much better tonight, they must have found something else..

I believe the local cable company (TCI) here in the Clear Lake area of Houston (near Johnson Space Center) carries NASA TV (NASA Select is a non-term....). It's been years since I was a subscriber, but back then, they were just carrying it during missions. I have heard they are carrying it 24 hours a day, now. But, I don't know that firsthand. I believe a lot of people asked the cable company for it and TCI (then Storer Cable) accomodated.

I suppose the same could happen with the DSS groups. Also, with local cable companies, if enough of their subscribers request it. Having a few school administrations backing the request might help, too.

Press for mission and non-mission airing of NASA TV. Might as well go all the way. Maybe it can be compromised down to mission coverage.

Good luck,

From: Rod Adkins <rod@mail.border.com>
Subject: RS-10 /RS-15 what are you using?

I am using up to 100w SSB with a J-pole ant for the uplink, & this is plenty for RS-10, but not good enough for RS-15 (steerable beam in progress).

I use a horizontal loop at about 25ft for 10m receive, & this works well for on RS-10, only ok for RS-15 on near-overhead passes. I find vertical antennas too noisy.

Methinks a "C" band dish setup is required. I don't think the digital
guys like Dish, USSB, Primestar, etc. are carrying NASA TV. For the
"bird" and transponder, check a copy of Satellite Times.

Subject: PacSat for Offshore Sailing

Ken,

I may not be of much help but I have assisted W4AVO (George) put his station together. He is a live aboard and blue water sailor. Last year he was in the Bahamas and will be there again this year. He has been on UO22 and has used his station very succesfully. AF4N Wes and I have both put in a good bit of time getting his boat ready (all three of us are sailors). George just went off internet and will be on the air for the next six months. Wes and I will be on internet and can offer some suggestions.

The first point is that it is not difficult and even underway the system works just fine. However antenna placement is a problem. George uses one J pole for up link and a small yagi for down link (3 elements). He rotates it 180 degrees during the pass and has no difficulity going from the radio to the cockpit to make the change. Since UO22 is basically automated his computer does all the work.

He uses a 386 that is not fast and is just a work horse.

If I can be of help please contact me.

1. I have about 100ft of feedline
2. I know the J-pole is not properly tuned yet (it's igloo-time up here)
3. I am surrounded by apartment buildings
4. In my experience, & in my situation, low power & omni-antennas work only when the satellite is on a near-overhead pass, and the satellite is not busy. I have almost given up working weekends, due to being stomped on.
5. If you want to work passes other than overhead, then because of the path loss, there is no choice but to increase power &/or antenna gain.
6. I was trying to give this guy the confidence that with his TX set-up he darn well ought to be able to make contacts.

Rod, VE3INE

Subject: Mirage Preamps - WEB Pages ??

Hi All!

I've had the Mirage Preamps recommended to me for SAT usage as aparently
they have a gain of 25db and only 0.8db noise (??)

Can anyone tell me where I can get more details of these preamps, or even
if there is a WEB page from the manufacturer ???

Also, if you would recommend any other Preamp for the job!!

Thanks ...

Mike de G1SYT ...

>Reply: charlie@smarty.smart.net
>Thanks in advance for any help.

You would need a c band satellite dish and receiver. I would think a 7 foot
would be about the minimum to get great video. you might be able to get by
with a 6 foot if you live near the center of the U.S.

The satellite is over to the east - 69 degrees west or so.

The good news is that you can scrounge together a system pretty cheaply. Lots
of people have old ones they aren't using anymore. You'd need a few bags of
cement and a pole, some cable to run into the house. If you only want it for
the one channel, this would be really easy and cheap to do.

I think it's going to move to a stronger satellite in the central arc
sometime
fairly soon. The good news is the signal would be stronger. The bad news is
that the new satellite would have others sats nearby, meaning the smaller
your
dish the greater the crosstalk. If you live on the west coast, it may be kind
of low on the horizon in it's present location. Let me know where you live
and
I'll see if I can give you the particulars. Email me....

Date: 8 Dec 1996 19:25:51 GMT
From: Guenter.Stautz@t-online.de (gs)
Subject: NoNo?:TrakBox, Ft736R and 23cm(P3D)

Hi All
after long nights with my TrakBox version 3.3h , I came to the
conclusion, that TrakBox designers had never in mind to let it
work on 23 cm with the Ft736R. ___Am I right ????___
The case: I'm a newcomer in the satellite operators community and
I'm trying to prepare my rig for Phase 3D in spring 1997.
So I tried to program satellites with 23cm RX or TX channels. But this
failed. My FT736R did not switch to 1296. Mhz, neither on RX nor TX.
The Ft736R is ok, because CAT programming directly via PC works.
I analysed the CAT commands from TrakBox to FT736R and found the
following hex command sequences for a 70cm/23cm satellite example:
0,0,0,0,0,
C9,60,0,0,1E, This is a dummy switching to 1296Mhz done in the
0,0,0,0,80, Oct. 18 '92 update for TrakBox version 2.05
0,0,0,0,0,
43,21,0,0,2E, This is the Sat. TX Frequency __is ok__.
0,0,0,0,80,
0,0,0,0,0,
8,0,0,0,27, This is TX Mode
8,0,0,0,17, This is RX Mode
0,0,0,0,80,
0,0,0,0,0,
12,96,34,49,1E, And here is the problem: My assumed RX frequency
0,0,0,0,80, 1296.34491 Mhz is not properly set. It should be:
C9,63,44,91 and not 12,96,....., and the dummy
above should be set to 144Mhz
Any help??
Thanks and sorry for this long message.

From: "Erik Skovgaard" <Erik_Skovgaard@bc.sympatico.ca>
Subject: Best Ant for RS-10 Down Link

Brad,

I use a sloping dipole on 10 m to receive RS-10. It always has a very
strong signal here. I added a Hamtronics pre-amp recently and it does
boost the signal a few S units and also provides a bit of selectivity to
reject out-of-band signals.

For uplink I have used a 1/4 wave vertical and about 80 Watts. I only
tried CW since the amp was not linear, but I got very good reports.

RS-10 could use some activity, so go ahead. Hope to wrk u there.

From: karen@ra3apw.ampr.demos.su (Karen Tadewosyan)
Subject: FT290/790 9600 Bd mods?

Bob,

this is info about 9600 bps mods for FT290/790 from my acrhive.
I used it some time ago and it run well.
I hope it will be usefull for you.

MODEM @WW de:DL6DBN 23.09.90 07:50 0 1568 Bytes
FT290/790RII mods. PSK/9k6
*** Bulletin-ID: 229008DB0SGL ***

900922/0911z DK0MWX, 900922/0714z DB0SGL
de DL6DBN @ DB0SGL

How to modify YAESU FT-290 RII and FT-790RII
for 1200 BpS PSK and 9600 BpS FSK

As you know, for 1200 BpS PSK/FM a direct injektion of the signal into the
FM-varicap is recommended and for 9600 BpS FSK necessary. For 9600 BpS you
will need the FM-discriminator output.

Due to SM-Technology the following modifications are not easy to manage.
FT-790RII in ()

The FM-discriminator output is at pin 9 of Q4001 (Q402) MC3357P. Use a
shielded cable to connect this pin with your 9k6-modem input. The IF-
bandwidth of CF01 (CF01) CFW455F seems to be to small for very good
results, so I recommend to exchange it with a CFW455D. With good RF-
strength and proper tuning the CFW455F can fit as well.

The more complicate modification is the injection point. Inject your TX-
signal below the main unit where R30124, C30120 and C30126 (R30117, C30117
and C30124) come together (all SMD). Is it necessary to say, use a shielded
cable? As long as no other AF from the tone unit or the microphon reaches
this point you must not cut any connections. But adjust your FM-deviation.

I made this changes in both radio sets and had already good contacts via
UoSAT-OSCAR 14. So good luck and success.

Subject: need info- 10 meter rec for mode A

Im looking for an inexpensive reciever (or tranciever) for 10 M SSB
to use on mode A-- thinking of the Uniden HR 2510 or the radio shack

HTX 100 does anyone have experiences/strong opinions on the pros and
cons of these radios, or other suggestions for a easy way to recieve
10 m SSB? Thanks Dave

I know nothing about the mentioned usegroup, but it is in my opinion very dangerous to muddle up the human rights with 3rd Reich while not considering one of the preliminaries of it being the freedom in te Weimarer Republik that at last was not able to defend itself against the nazis.

We always have to trade freedom against control, if control means giving shelter to freedom.

>Reply: charlie@smarty.smart.net
>Thanks in advance for any help.

You would need a c band satellite dish and receiver. I would think a 7 foot
would be about the minimum to get great video. you might be able to get by
with a 6 foot if you live near the center of the U.S.

The satellite is over to the east - 69 degrees west or so.

The good news is that you can scrounge together a system pretty cheaply. Lots
of people have old ones they aren't using anymore. You'd need a few bags of
cement and a pole, some cable to run into the house. If you only want it for
the one channel, this would be really easy and cheap to do.

I think it's going to move to a stronger satellite in the central arc
sometime
fairly soon. The good news is the signal would be stronger. The bad news is
that the new satellite would have others sats nearby, meaning the smaller
your
dish the greater the crosstalk. If you live on the west coast, it may be kind
of low on the horizon in it's present location. Let me know where you live
and
I'll see if I can give you the particulars. Email me....

From: Guenter.Stautz@t-online.de (gs)
Subject: NoNo?:TrakBox, Ft736R and 23cm(P3D)

Hi All
after long nights with my TrakBox version 3.3h , I came to the
conclusion, that TrakBox designers had never in mind to let it
work on 23 cm with the Ft736R. ___Am I right ????___
The case: I'm a newcomer in the satellite operators community and
I'm trying to prepare my rig for Phase 3D in spring 1997.
So I tried to program satellites with 23cm RX or TX channels. But this
failed. My FT736R did not switch to 1296. Mhz, neither on RX nor TX.
The Ft736R is ok, because CAT programming directly via PC works.
I analysed the CAT commands from TrakBox to FT736R and found the
following hex command sequences for a 70cm/23cm satellite example:
0,0,0,0,0,
C9,60,0,0,1E, This is a dummy switching to 1296Mhz done in the
0,0,0,0,80, Oct. 18 '92 update for TrakBox version 2.05

0,0,0,0,0,
43,21,0,0,2E, This is the Sat. TX Frequency __is ok__.
0,0,0,0,80,
0,0,0,0,0,
8,0,0,0,27, This is TX Mode
8,0,0,0,17, This is RX Mode
0,0,0,0,80,
0,0,0,0,0,
12,96,34,49,1E, And here is the problem: My assumed RX frequency
0,0,0,0,80, 1296.34491 Mhz is not properly set. It should be:
C9,63,44,91 and not 12,96,....., and the dummy
above should be set to 144Mhz
Any help??
Thanks and sorry for this long message.

From: "Erik Skovgaard" <Erik_Skovgaard@bc.sympatico.ca>
Subject: Best Ant for RS-10 Down Link

Brad,

I use a sloping dipole on 10 m to receive RS-10. It always has a very
strong signal here. I added a Hamtronics pre-amp recently and it does
boost the signal a few S units and also provides a bit of selectivity to
reject out-of-band signals.

For uplink I have used a 1/4 wave vertical and about 80 Watts. I only
tried CW since the amp was not linear, but I got very good reports.

RS-10 could use some activity, so go ahead. Hope to wrk u there.

From: karen@ra3apw.ampr.demos.su (Karen Tadewosyan)
Subject: FT290/790 9600 Bd mods?

Bob,

this is info about 9600 bps mods for FT290/790 from my acrhive.
I used it some time ago and it run well.
I hope it will be usefull for you.

MODEM @WW de:DL6DBN 23.09.90 07:50 0 1568 Bytes

FT290/790RII mods. PSK/9k6
*** Bulletin-ID: 229008DB0SGL ***

de DL6DBN @ DB0SGL

How to modify YAESU FT-290 RII and FT-790RII
for 1200 BpS PSK and 9600 BpS FSK

As you know, for 1200 BpS PSK/FM a direct injektion of the signal into the FM-varicap is recommended and for 9600 BpS FSK necessary. For 9600 BpS you will need the FM-discriminator output.

Due to SM-Technology the following modifications are not easy to manage. FT-790RII in ()

The FM-discriminator output is at pin 9 of Q4001 (Q402) MC3357P. Use a shielded cable to connect this pin with your 9k6-modem input. The IF-bandwidth of CF01 (CF01) CFW455F seems to be to small for very good results, so I recommend to exchange it with a CFW455D. With good RF-strength and proper tuning the CFW455F can fit as well.

The more complicate modification is the injection point. Inject your TX-signal below the main unit where R30124, C30120 and C30126 (R30117, C30117 and C30124) come together (all SMD). Is it necessary to say, use a shielded cable? As long as no other AF from the tone unit or the microphon reaches this point you must not cut any connections. But adjust your FM-deviation.

I made this changes in both radio sets and had already good contacts via UoSAT-OSCAR 14. So good luck and success.

Subject: need info- 10 meter rec for mode A

Im looking for an inexpensive reciever (or tranciever) for 10 M SSB
to use on mode A-- thinking of the Uniden HR 2510 or the radio shack
HTX 100 does anyone have experiences/strong opinions on the pros and
cons of these radios, or other suggestions for a easy way to recieve
10 m SSB? Thanks Dave

>Thanks de wa1vht

I'm kind of on the same quest. At least to figure out where to spend the
first $2K. Which I don't think is really cheap by most people's standards,
but which is a little bit less than what it takes to walk into HRO and
just do the whole thing brand new. My impression is that the guys who
are pretty serious about this seem to have the 726 or 736 and the KLM/M2
antenna set. Personally, I put a lot of confidence in conventional
wisdom. So, to go this way, the game seems to become, how to scrounge up
this kind of system. (Of course with preaamps, amplifiers and all that.)

Personally, my thinking now on how to do this in gradual, stages
is to do the antenna side first. New. At least deal with
the tracking, feedline and preamp issues. While finding a used 2M SSB radio.
Maybe working RS-10 , Mir or something, and then trying to hear sats on
440 Mhz with converters. (Not sure if 440->28mHZ or 440->144Mhz is better?)

By then, I figure a few months will have passed, I'll be able to hear
what's going on, and either I'll be anxious to be rid of the whole thing
or I'll be lusting after a, probably used, 726/736. By then, I figure we'll
know whether P3d is going to be really cool, etc. Fingers crossed.

From: "Roger E. Koss" <kossr@edl1.ksc.nasa.gov>
Subject: Best Ant for RS-10 Down Link

Brad:
I'm using a dipole cut for 10 meters, up only about 15 feet, and it
works just fine into a Uniden HR2600. For my uplink, I have a 5/8 wave
homebrew groundplane up 30', which I feed with 25 watts from a Yaesu
FT-290R Mk II. RS-10 has a very sensitive receiver and an excellent
transmitter. Much more than this would be overkill. Hope to work you on
the birds someday.

Subject: Best Ant for RS-10 Down Link

To The Group:

I'm in the process of setting up a satelite system. A few local guys
are having fun with RS-10. What I would like to do is to set up a nice
beginners station. I currently have a IC-275A with a GP-3 for the Up link
and two different HF xcvr's to set up the down link. My question is would
an HF vertical like the Ringo ranger AR-10 work or maybe an inverted V
dipole. I am reading the ARRL satelite handbook but I'd like to hear from
some people actually working the birds. Also should I get a pre-amp and if
so does anyone have any recommendations ie buy,build?? Thanks for your
help.

RS-10 has a very strong downlink for an amatuer satellite. I put up a Ringo, but can honestly say that it didn't offer any better performance than a simple dipole.

Try orienting the dipole for best north/south reception. Don't worry about a pre-amp. I used a Radio Shack 10m rig to listen to my downlinks.

Subject: Cu-Seeme Video conferencing

Does anyone know of anyone using Video Conferencing on computer/internet in conjunction with amateur redio? I have been in contact with hundreds of people from around the world on Cu-Seeme and have run into only one ham. Is there a freq. HF or VHF where hams may hang out that use both modes..computer and radio. I believe this would be a natural progression from Slow Scan. We now can SEE the people we are in QSO with.

If you are interested in setting up a sched. and have Video COnferencing capabilities or are just interested drop me an e-mail,

73's

Subject: free money

Oh! My? $$$$
THIS IS THE FAIREST MOST HONEST WAY I KNOW TO SHARE THE WEALTH! Hello! (Save this file now...it will save you some time typing later if you decide to try this)
Would you like to make thousands of dollars, quick, legally, with NO CATCH? Then keep reading....please take five minutes to read this article it will change your life, just like it did mine. It's true! You can make up to or over $50,000 dollars in 4-6 weeks, maybe sooner! I SWEAR I'M NOT LYING TO YOU, AND THIS IS NOT A SCAM! If you're intrested, keep reading; if you're not, I apologize for wasting your time.
Here we go. A little while back, I was browsing through these

newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars in weeks with only an initial investment of $5! So, I thought, "Yeah, right, must be a scam", but I was curious, like most of us , so I kept reading. Anyway, it
said that you send $1 to each of the 5 names and addresses stated in the article. You then place your own name and address in the article at the bottom of the list at #5, and post the article in at least 200 newsgroups (there are thousands). No catch, that was it!
So after thinking it over, talking to a few people first, I tried it. I figured what have I got to lose except for 5 stamps and $5, right? Well, guess what...within 7 days, I started getting money in the mail! I was shocked! I still figured it would end soon, and didn't give it another thought. But then money kept coming IN, tripling in size and multiplying by 10-20 times the amount that I got the first week! In my first week I made about 20 to 30 dollars. But by the end of the second week, I had made a total of over $1,000!!!! In the third week, I had over $10,000 dollars, and it's still growing. This is my fourth week (Oct 11) and I've made about $42,000 TOTAL, and the money is still coming in.....
Let me tell you how this works and most importantly, WHY it works...also, make sure you print a copy of the article NOW, so you get the information off of it, and begin making money.

The process is very simple, and it consists of 3 EASY steps:

STEP 1: Get 5 seperate pieces of paper and write the following on each sheet of paper..."PLEASE PUT ME ON YOUR MAILING LIST. YOU ARE NUMBER 5." (etc. to number 1) Get five $1 bills and place ONE inside each piece of paper that
you just wrote on, and fold each piece of paper so the bill will not be seen in the envelope (otherwise, nosey people who like to steal envelopes with money in it will get yours). Put one paper inside the envelope and seal it. Do the same for all 5. You should now have 5 envelopes sealed, EACH have a piece of paper AND a $1 bill stuffed inside of the paper. Make sure those words that were stated above are stated on each paper. What you are doing is creating a service by this, this is PERFECTLY LEGAL. Now then, mail the 5 envelopes with the paper and $1 in each to the following 5 addresses:

1. P.DEBOUZY, 9 rue des Lavandieres, 78530 BUC, FRANCE.
2. J. MAHON, 750 Highland Dr. Apt. #210, Ojai, Calif. 930234.
3. P. Rae, 209 Oak Butte CT., Folsom. California. 95630. USA5.
4. M. Rapp, 801 Mockingbird Ct., Hinesville, GA 31313 USA
5. J. Rhodes, 5011 Stoneview Dr., Charlestown, IN 47111

STEP 2: Now take the #1 name off the list that you see above, move the other 4 names up (5 becoming 4, 4 becoming 3, ect.) and put YOUR NAME as number 5 on the list. You can slightly alter this article if you need to, editing what you need to edit.

STEP 3: Post your amended article (with your name at #5) to at least 200 news groups (I think there are close to 18,000 of them). All you need is say, at least 200. HOW TO DO THIS: If you have Netscape 3.0 do EXACTLY the following:

1) Click on any news group like normal, THEN click on 'TO NEWS', which is on the far left when you're in the newsgroups page. This will bring up a box to type a message in.

2) Leave the newsgroup box like it is, CHANGE the subject box to something flashy, like, "NEED CASH $$$ READ HERE $$$" or "FAST CASH"!!!

3) Tab once and you should be ready to type. Now, retype (only once) THIS whole article WORD FOR WORD, except to insert your name at #5, and to remove #1 off the list, plus any other small changes you think you need to make. Keep almost all of it the SAME!

4) When you're done typing the WHOLE article, click on FILE in THIS BOX, RIGHT ABOUVE SEND, NOT WHERE IT SAYS NETSCAPE NEWS ON THE FIRST BOX. Click on SAVE AS when you're under FILE. Save you artcle as a text file to your C: or A: drive. DO NOT SEND OR POST YOUR ARTICLE UNTIL YOU DO THIS. Once saved, move on to number 5 below.

5) If you still have all of your text, send or post to this newsgroup now by just clicking send, which is right below FILE, and right above Cc: .

6)Here's where you're going to post all 200. OK, click on any news group then click on 'TO NEWS', again in the top left corner. Leave the NEWSGROUPS BOX alone again, put a flashy subject title in the SUBJECT BOX, hit TAB once you're in the body of the message, and then click on ATTACHMENTS, which is below the SUBJECT BOX. You will get another box to come up. Click on ATTACH FILE, then find YOUR file that you saved; click once on the file, and then click OPEN' now click on OK; if you did this right, you should see your file name in the attachments box, and it will be shaded green.

IF YOU USE IE EXPLORER IT'S JUST AS EASY...HOLDING DOWN THE LEFT MOUSE BUTTON, HIGHLIGHT THIS ARTICLE. THEN PRESS THE "CRTL" KEY AND THE "C" KEY AT THE SAME TIME TO COPY THIS ARTICLE. THEN PRINT THIS ARTICLE FOR YOUR RECORDS TO HAVE THE NAMES OF THOSE YOU WILL BE SENDING $1 BILLS TO. NEXT GO TO THE NEWS GROUPS AND PRESS "POST AN ARTICLE" A WINDOW WILL OPEN. TYPE IN YOUR HEADLINE IN THE SUBJECT AREA AND THEN CLICK IN THE LARGE WINDOW BELOW. PRESS "CRTL" AND THEN "V" AND THE ARTICLE WILL BE PLACED IN THE WINDOW. IF YOU WANT TO EDIT THE ARTICLE, DO SO AND THEN HIGHLIGHT AND COPY IT AGAIN. NOW EVERYTIME YOU POST THE ARTICLE

IN
A NEW NEWSGROUP ALL YOU HAVE TO REPEAT "CTRL" AND "V" AND PRESS POST.

7)That's it. Each time you do this, all you have to do is type in a different newsgroup, so that way, it posts to 200 DIFFERENT newsgroups, you see? Now you just have 199 to go!! (Don't worry, each one takes about 30 seconds, once you get used to it) REMEMBER 200 IS THE MINIMUM.

The more you post the more money you will make.

AND THAT'S IT!!! THAT'S THE ONLY 3 STEPS THERE IS!!!

You are now in the mail order business and will start recieving your $1 envelopes from various people all over the world within days. HINT THE MORE NEWSGROUPS YOU POST TO, THE MORE MONEY YOU WILL MAKE. You may want to rent a PO Box eventually because of all the mail. If you wish to stay anonymous, you can come up with a name, such as "manager" or "investor". Just make sure all the addresses are CORRECT, please.

LET ME TELL YOU WHY THIS SYSTEM WORK!!!!

Out of every 200 postings, let's say I ONLY recieve 5 replies, which is actually VERY LOW. So I made 5 dollars with my name at #5. Now then, each person who just sent me $1 makes, say only 200 postings, now with your name at number 4, WHICH IS A TOTAL OF 1000 POSTINGS, not including yours too. 50 people send you $1 now; thats $50 you just made! Now, then your new 50 agents post 200 each with YOUR NAME AT NUMBER 3, OR 10,000 POSTING (50x200). Average return is 500 at $1 each is $500. They make 200 postings, which is 5,000 returns at $1 each, which is $5000 dollars! And finally, 5000 people make 200 postings wach with YOUR NAME AT NUMBER 1. YOU NOW GET A RETURN OF $50,000 BEFORE YOUR NAME DROPS OFF THE LIST. AND THAT'S IF EVERYONE MAKES 200 POSTINGS ONLY, AND IF ONLY 5 PERSONS RESPOND!!!!!
When your name is no longer on the list, you just take the latest posting that is appearing in the newsgroups, and SEND OUT ANOTHER $5 TO THE NAMES ON THE LIST, PUTTING YOUR NAME AT 5 AGAIN. And start posting again. The thing to remember is, do you realize that THOUSANDS OF PEOPLE ALL OVER THE WORLD ARE JOINING THE INTERNET AND READING THESE ARTICLES EVERY DAY, JUST LIKE YOU ARE RIGHT NOW!!! So can afford $5 dollars and see if it really works? I think so.....
People have said, "What if the plan is played out and no one
sends you
the money?" So what! What are the chances of that happening when there are TONS OF NEW HONEST USERS AND NEW HONEST PEOPLE who are joining the Internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with THOUSANDS of those joing the actual Internet. Remember, play FAIRLY and HONESTLY and this WILL WORK, I PROMISE YOU!!! You just have to be honest. Make sure you print this article out RIGHT NOW, also, try to keep a list of everyone that sends you money and always keep an eye on the mnewsgroups to make sure everyone is playing fairly. REMEMBER, HONESTY IS THE BEST POLICY. YOU DON'T NEED TO CHEAT THE BASIC IDEA TO MAKE MONEY!! GOOD LUCK TO ALL AND PLEASE PLAY FAIRLY AND YOU WILL REAP THE HUGE REWARDS FROM THIS, WHICH IS TONS OF EXTRA CASH!!!
**By the way, if you try to decieve people by posting the

messages with
your name on the list and not sending the money to the people already

on
the list, you will not get much. Someone I talKed to knew someone who
did that and he only made $150 dollars, and that's AFTER seven or eight
weeks! Then he sent the 5 $1 bills, people added him to their lists,
and in 4-5 weeks, he had over $10K.
THIS IS THE FAIREST AND MOST HONEST WAY I HAVE EVER SEEN TO SHARE THE
WEALTH OF THE WORLD WITHOUT COSTING ANYTHING BUT OUR TIME!!!

Hi,
I am interested in getting a new radio for P3D. The 736 seems to be the
historical favorite but there are new radios from Kenwood and Icom. Has
anyone compared the features or performance? Do the Kenwood or Icom
radios have the same special satellite oriented features that the Yaesu
736 has? If you were going to buy one which one would you choose and
why?

I am planning to operate on 1.2 GHz in addition to 2 and 440.

I would also be interested to know what you would recommend for 2.3 GHz.

Thanks very much for you advice in advance.

Hi just a quick note-- the Two meter antenna was broken on the first
EVA and they did a second EVA today and did a makeshift repair which
will work, but the signal will not be as strong or as steady as
before.. but it will work for the time being, they will fix the coax
and on the next planned EVA make the proper repair.. I have no idea
when that will be.. 73 DAVE N1PPP

From: kwalker@qb.island.net (Ken Walker)
Subject: PacSat for Offshore Sailing

I have not followed the development of the packet capable amateur satellites
but I believe there are some in operation. As a sometimes off shore sailor
and a radio amateur, I am asked by fellow sailors whether they should get a
ham licence and how effective it would be. I tell them about 20m ssb, about
hf packet and amtor but I also go on about how low earth store and forward
packet satellites will be available one day. But maybe they are now?

The ideal packet system for offshore use would allow the offshore sailing ham
to prepare a packet message and the software would determine when a bird is
overhead and send up the message and pick up any waiting mail. Are these
birds ready to do this? Is there software that would do it? Am I right that
these can be worked with small omni antennas?

I think they require dual band operation? Which bands? Hopefully they are
bands that can be worked with readily available dual band mobile rigs?

I have thought about this from time to time but I am not up to date on what is
available. Anyone want to try to update me??

Thanks.

I've used a IC251A with 10 watts into a Jpole, and a beat-up Undien 2510
fed with a 100 foot long dipole. No problem working ssb or CW on RS-10,
CW only on RS15.

When I added a Hamtronics downconverter for 70cm, I could work FO-20
quite often as well.

Kurt, when I wrote my routines for FT736R CAT (published on this
BBS) I discovered that Yaesu did a great job and introduced only 2
bugs.

One was that if the radio is in (say) 2m RX /70cm TX, then the CAT cannot
change it to 70cm RX /2m TX! This is because you have to make the
changes in two stages, e.g. 2/70 -> 2/2 -> 70/2.

Obviously the middle step is inadmissable. If your radio has a third
module (e.g.
23cm), then you can go 2/70 -> 23/70 -> 23/2 -> 70/2.

The other bug concerns reading the s-meter and squelch. This
sometimes misses the last byte.

So your problem is not a fault of the tracker-box code.

From: dhend@cyberportal.net (Dave Hendrick)
Subject: Mir's EVA

from Chris Van deBerg
MIRNEWS 10 DECEMBER 1996 (338)

2d Spacewalk (EVA) 22d Mainexpedition (ME) MIR:

This EVA took place on 9.12.1996 between 1352UTC (opening
hatch) and 2028UTC (closing hatch). So a duration of 6
hrs 36 mins. The EVA lasted longer for Korzun wished to
accomplish all what had to be done and there also was a
problem with something which bungled loose. Before
return they restored the connection of the radio-
amateurantenne for the 145 mc. Probably this antenne had
been disconnected by accident during the 1st EVA. They
connected the antenna again and while they were flying
over Chile and Brasil they asked John Blaha to listen
out on the 145.800 mc to check whether the antenne was

working or not. There was no traffic on that frequency
in that area and so they had to wait until they came in
range of European amateurs. I asked the English radio-
amateur Pat Gowen (G3IOR) to give calls on 145.800 mc as
soon as MIR would come in range (at abt. 1934UTC). So he
did and these signals could be heard by John Blaha while
MIR was flying over France. He reported this to the
still being on EVA Korzun and Kaleri and congratulated
them with their success. Korzun urged John not to
transmit, but to listen only. The cosmonauts fully
accomplished their tasks: installing the truss
construction Rapana at the truss Ferma-3 and the
replacement of the Kurs-antenna on the outersurface of
the P.Kh.O. (transitionsection). John Blaha who stayed
inside the complex took care of the communications and
executed commands given to him by TsUP. He gave the
cosmonauts all possible moral and technical help. The
cosmonauts and Blaha did an excellent job during this
EVA, they gave an example of fruitful international
cooperation and so they all deserve a loud: 'MOLODTSY'
(very well done).
Of course the cosmonauts were very tired after the EVA
and back in the airlock they had to do hard labour to
put off their spacesuits.
Just before midnight Korzun could be heard in a contact
with a Portugese radio-amateur via the repaired antenne
for the 145 mc.

Thusfar there are no more EVA's on schedule for this
crew.
I hope this fills in the gaps, it was working much better tonight,
they must have found something else..

I believe the local cable company (TCI) here in the Clear Lake area of
Houston (near Johnson Space Center) carries NASA TV (NASA Select is a
non-term....). It's been years since I was a subscriber, but back then,
they were just carrying it during missions. I have heard they are carrying
it 24 hours a day, now. But, I don't know that firsthand. I believe a lot
of people asked the cable company for it and TCI (then Storer Cable)
accomodated.

I suppose the same could happen with the DSS groups. Also, with local
cable companies, if enough of their subscribers request it. Having a few

school administrations backing the request might help, too.

Press for mission and non-mission airing of NASA TV. Might as well go all the way. Maybe it can be compromised down to mission coverage.

Good luck,

From: Rod Adkins <rod@mail.border.com>
Subject: RS-10 /RS-15 what are you using?

I am using up to 100w SSB with a J-pole ant for the uplink, & this is plenty for RS-10, but not good enough for RS-15 (steerable beam in progress).

I use a horizontal loop at about 25ft for 10m receive, & this works well for on RS-10, only ok for RS-15 on near-overhead passes. I find vertical antennas too noisy.

Methinks a "C" band dish setup is required. I don't think the digital guys like Dish, USSB, Primestar, etc. are carrying NASA TV. For the "bird" and transponder, check a copy of Satellite Times.

From: Herb Perkins <wa2jrv@amsat.org>
Subject: PacSat for Offshore Sailing

Ken,

I may not be of much help but I have assisted W4AVO (George) put his station together. He is a live aboard and blue water sailor. Last year he was in the Bahamas and will be there again this year. He has been on UO22 and has used his station very succesfully. AF4N Wes and I have both put in a good bit of time getting his boat ready (all three of us are sailors). George just went off internet and will be on the air for the next six months. Wes and I will be on internet and can offer some suggestions.

The first point is that it is not difficult and even underway the system works just fine. However antenna placement is a problem. George uses one J pole for up link and a small yagi for down link (3 elements). He rotates it 180 degrees during the pass and has no difficulity going from the radio to the cockpit to make the change. Since UO22 is basically automated his computer does all the work.

He uses a 386 that is not fast and is just a work horse.

If I can be of help please contact me.

1. I have about 100ft of feedline
2. I know the J-pole is not properly tuned yet (it's igloo-time up here)
3. I am surrounded by apartment buildings
4. In my experience, & in my situation, low power & omni-antennas work only when the satellite is on a near-overhead pass, and the satellite is not busy. I have almost given up working weekends, due to being stomped on.
5. If you want to work passes other than overhead, then because of the path loss, there is no choice but to increase power &/or antenna gain.
6. I was trying to give this guy the confidence that with his TX set-up he darn well ought to be able to make contacts.

From: miksuora@sara.utu.fi
Message-ID: <58s2aj$iql@ankka.csc.fi>
Source record: 20647

I've done fine with just a G5RV or groundplane for 28MHz downlonk. 1/4 vertical and 5 watts of power is plenty for RS-10 ;) However, as far as I know, RS-10 has no stabilization system, and polarization QSB is a problem with linear polarization antennas. I would recommend a cross dipole for both up- and downlink.

2722. Logging Programs

Newsgroup: rec.radio.amateur.space
Date: 1996-12-13 00:00:00 UTC
From: Mark Fossum <n0nsv@amsat.org>
Message-ID: <32B1A7C6.ADD@amsat.org>
Source record: 20648

Hello:

I'm looking for a good Windows based logging program that has provisions for Satellite operations.

My intention is to automate some of the logging and QSL tasks that I'm doing. I would like to have QSL stickers printed (inkjet printer), address labels so that I can eliminate some of the handwork.

Rig control, packet operations are really secondary at this time since I don't have access to the PacketCluster here in North Dakota. My current Satellite rig is not computer interfaced.

Has anyone got any good suggestions for me?

Mark Fossum N0NSV

I haven't received much of a response from this group. What I'm trying to do
is counter people who tell me that Amateur Radio is too expensive in general
and also the hams who think that space communication is very expensive.

What I've been able to find out so far is that Hamtronics has xmit and recv
converters available in kit form. They also have LNA kits. Down East
Microwave has transverters, LNA's, antennas, etc. These are more expensive,
but still much less than an FT-736 (even without the extra band modules).
Once you get above 70cm with the DEM transverters, you need a 2m all-mode rig.
Their 6/2/70 transverters all work with HF rigs, but the 900Mhz-an-up ones
convert to 2 meters.

For gain-per-buck, it looks hard to beat a quad. They're also hard to beat
for ice loading and cumbersomeness (at lower freq's, anyway.) Lightning Bolt
has 2m and 70cm quads that are good for about 12 dBd and not too expensive.

Of course, you can work CW through RS-10 with your FM HT (no PL or audio) and a 10 meter receiver. MIR and the Shuttle are also workable with relatively little investment, other than a good antenna and an amplifier for your HT.

Anyone else have any suggestions?

I put together a cheap satellite station several years ago (I've since improved it).
It consisted of the following:

AZ-EL rotor system made of two Gemini TV antenna rotators purchased at
Home Depot.

435Mhz Uplink antenna (22 element cross yagi) made from the parts of Two
fringe area TV antennas.
2m Downlink antenna (11 element cross yagi) made from old cushcraft 11
element beams.
I designed them both using the YagiMax program.

Uplink radio (435mhz) made from a Ranger 3500 all mode 10 meter radio
driving a DownEast Microwave 435Mhz transverter Kit.

Downlink radio was an old Kenwood TS700A with a Pre-Amp.

I don't remember the cost of all this and I already had some of the
equipment. but I'd guess the value whole thing including feed line was
under a $1000. With careful scrounging, you could probably do even
better.

I was able to work all the analog birds with this equipment and I'm
still using the antenna system.

Go for the 821h, more power, better RX, smaller...I have a 736 and
would/am happily sell it to buy a 821h. Mine has a 6m module.. :)

The 820 and 821 have dual RX so you can rx on 70cm and tx on 2m or vica
versa...

I just wish the 821h had 23 cms too.

I have the same question. I am specifically interested in seeing any reviews of the 821H. A few years ago, I almost bought an 820H then I read James Miller's review that pointed out all the design problems with that radio (for satellite use). The 821H is supposed to have addressed those problems but I'd be hesitant until I've heard otherwise.

I've been waiting for Yaesu to come out with a next generation 736R (with ports for 9600 baud and maybe discriminator output for doppler correction while using FM) but I think I'll have to wait some more.

Bob

The FT-736 is the work horse of the satellite world. It is a bit dated and needs a mod to do 9600 baud. The support both software and hardware are the most extensive for availabe radio. The 736 will accept two additional bands modules so when P3D goes up you can use the 1296 uplink without a transverter. Yaesu modified my 736 for 9600 without charge. It is a larger rig than the 821 but for a base station offers more. Drop me an email if I can help more.

2737. AG25 and AG35 preamps and linear amplifiers???

Newsgroup: rec.radio.amateur.space
Date: 1996-12-14 00:00:00 UTC
From: Joe Leikhim <Jleikhim@nettally.com>
Message-ID: <32B2479D.5970@nettally.com>
Source record: 20663

I have an ICOM IC970 with the AG25 and AG35 TR switched preamplifiers that I am using for terrestrial and satellite work. I will need to add some amplifiers in the near future in order to compensate for cable loss to my new tower.

The AG series preamplifiers are spec'd at a maximum of 100W. Has anyone had any experience running higher power through them without damage?

The TR switch uses a DC voltage via coax from the transceiver in the receive mode to activate the bypass relay and to power the Gasfet. Which commercially available 2m and 70cm amplifiers in the range of 10w-25w input 100w-160w output, can be easily modified to allow DC to pass through the amplifier in the receive mode? I prefer not to modify the preamplifiers for external control.

Thanks

2739. TRAKSAT 4.00 Released

Newsgroup: rec.radio.amateur.space
Date: 1996-12-15 00:00:00 UTC
From: "Paul E. Traufler" <wintrak@traveller.com>
Message-ID: <01bbead1$f4a2e040$51ae1ace@traveller.com.traveller.com>
Source record: 20523

TRAKSAT Version 4.00 Has Been Released

TRAKSAT is a general purpose satellite tracking program, by that
I mean any satellite that has a NORAD, NASA 2-Line element set
can be used. The solution to the satellite motion which is used
by TRAKSAT is completely analytic and therefore requires no
numerical integration. This makes the program fast, even faster
when a coprocessor is used, since the solutions can be evaluated
at arbitrarily large, or small, time intervals.

The purpose of this program is to provide the user with a means
of propagating NORAD element sets in time to obtain tracking
information of the space object.

What is new?

New with this version is two fully rendered 3D earth views with full
color Sun/Shadow. These views are breath taking! TRAKSAT is now a
fully protected mode program with no DOS 640K limits! The program
uses Extended or Expanded memory and requires only 250K of free
RAM. This is the FOURTH major re-write of the program and is
considered the best by all the trial users.

The program has expaned on-line help along with better and additional
error checking. Speed and features are what is it all about.

Take a look at the Home Page

2740. New Concept! Cybersched your next satellite/DX contact

Newsgroup: rec.radio.amateur.space
Date: 1996-12-15 00:00:00 UTC
From: wb6siv@telis.org
Message-ID: <wb6siv-1512962118150001@s21-pm05-ontro-t.telis.org>
Source record: 20524

By combining the benefits of the World Wide Web and E-mail, you can use the internet to set up schedules to contact hard to find hams all over the world.

How can Cyberscheds help me?

Are you in need of a single state to qualify for the WAS Award? Do you need one more country to qualify for DXCC? Are a county hunter, looking for a few allusive counties? Are you into QRP, and trying to reach a DXCC? Then Cybersched can be a great benefit to your ham radio operations.

DX stations will also find that by establishing prearranged schedules, they can avoid the pile-up mania that makes working the states anything but enjoyable.
Using the same procedure one would use to work the Space Shuttle, you can now (thanks to the World Wide Web) work DX and stateside stations in an orderly and productive way.

Visit http://www.sarrio.com and estabish your own cybersched

Keywords:

For Sale:
RARE Tram Factory Service Manuals (Gone out of business now) for Tram
Citizen Band Radios (CB SSB/AM)
These manuals include:
o Tune Up Procedures
o Schematics
o Photos of the PC Boards
o Alignment procedures
o Testing
The manuals are 10 to 20 pages long. In SUPERB condition!
No soiled, roughed, or dogeared pages. The booklet is stapled.
Model Price
XL $25
XL5 $30
DIAMOND 40 $40
DIAMOND 60 $50
D201 (Base unit) $10

2742. Repeater on Mir

Newsgroup: rec.radio.amateur.space
Date: 1996-12-15 00:00:00 UTC
From: orion@capital.net
Message-ID: <32b3831c.44778402@news.capital.net>
Source record: 20665

Can someone tell me the frequency of the 70 centimeter repeater aboard
Mir? I saw it somewhere, but can't remember what it was. I need the
uplink and downlink or offset.
Thanks
--
73,
Butch N2YMJ

I used to have ICOM, but the Yaesu seems to be a little
better....(opinion, of course). I see the full duplex is much more
ease of use than the Icom, and has spots for 50mhz,1296mhz also!

Mark,
Try the program called DX4WIN. This logger is win95 based and has all
the bells & Whistles! Excellent and ease of use! Full printer
control of lables, QSL's.
Auto tracking of DXCC,WAS, WAC....etc.....

Check out CU-SEE-ME.

I use it to see the same feeds that they show on the Sat.

It is only 28.8 but, you can get it..

2752. NORAD Two-Line Orbital Element Sets (TLE916)

Newsgroup: rec.radio.amateur.space
Date: 1996-12-16 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <594llv$kne@blackbird.afit.af.mil>
Source record: 20529

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

****

2753. Decoding Hubble Images

Newsgroup: rec.radio.amateur.space
Date: 1996-12-16 00:00:00 UTC
From: Not Setup <Not.Setup@conoco.dupont.com>
Message-ID: <32B61D05.4E65@conoco.dupont.com>
Source record: 20530

Is there a cheap method for decoding Hubble Telescope images?
Is there a kit to build?
What frequency and mode of transmission (WFM, NFM, Spread Spectrum)does
Hubble use?
Please reply to me in this group.
Thanks,
Hawkeye

FM repeater with CTCSS subtone 141.3 Hz.
Downlink 437.950 MHz
Uplink 435.750 MHz

Hope this helps,
Bob

Very interesting. What kind of gear? Radio? TNC? Software?
Was the radio modified for 9600? How much power do you transmit?

2756. Wanted - TV Sat Antenna

Suggestions based upon a little practical experience, and some guesses based upon that.

I started out with not too much money to spend, but I hade been promising myself a decent multi-band VHF/UHF rig for a long time, so I blew most of the budget on an FT-736R. Its a nice rig even if you don't work satellite with it.

I bought a GP-9 antenna to go with it, just so that I could use it. A GP-9 is a 2M/70cm vertical antenna. It is fed through a diplexer arrangement.

I was relatively happy with this setup for local FM and SSB work.

I had read the same books and articles that you probably have, detailing the exotic and expensive antenna/rotator/amplifier/feed-line needed to work satellite.

So I was a little surprised when I tried listening for various satellites and could actually hear stuff. The high orbit satellites (AO-13, AO-10) were pretty much useless, but the low orbit satellites could be copied!

Encouraged by this, I tried transmitting a few "bips", and was pleasantly surprised that occasionaly I could hear them coming back. HRO had a "special" on Mirage amplifiers about that time, so I bought a 25w in/160w out 2M amp, and hooked that in. With this setup I have had several QSOs through FO-20 and FO-29.

It is far from ideal, but it can be done. If you want the ease and convenience of a repeater contact - forget it, but if you are prepared to work for your contact, go ahead.

With the same setup I had a conversation with Mir, and have even managed to raise the 70cm repeater on Mir, and initiate, but not complete, a contact.

(25W to a GP-9 just isn't good enough for that).

The biggest problems that I have are the doppler shift, which can be a real problem
when the satellite gets close, and the radiation pattern of the GP-9 isn't
designed to cover the sky, so there are big nulls.

So, what do you need (minimally) to work (say) FO-20 ?

- A 70cm receiver
- A 2M SSB transmitter running 100+ watts
- Simple antennas (I suspect a couple of 1/4 wave groundplanes might work)

To work Mir and/or the shuttle a 2M FM tranceiver, with maybe 10/20 watts
and almost any outdoor antenna should do.

That should get you a contact.

If you don't mind building antennas, Lindenblads might be a good idea
(see AMSAT web site for details).

What I am going to do next is:

- Build a TrakBox kit ($250 from TAPR)
This will initially be used for doppler correction, later
to control an antenna system.

- Build a couple of helix antennas for 70cm.
The antenna design used by AF9Y (http://www.webcom.com/af9y/)
to listen to the Mars probe is the basis. A couple of these
cut down to 5' will give a 70CM antenna system which is
much shorter, and easy to manipulate than an 18' crossed Yagi.
Adding another two helix in the opposite sense will allow
RHC/LHC switching with a simple antenna relay.
Buy a Yaesu H/V rotator (about $500) to direct this setup.

- Use an omni-directional antenna for the 2M uplink. Possibly a Lindenblad,
or maybe an M2 "eggbeater".

- Add a LNA to the 70cm antenna (if needed).

My main piece of advice is to invest firstly in the TX/RX system.
The FT-736 is less than $2000, and if you can afford it, it is worth the money,
if only for the "satellite mode", which allows you to tune the RX, and the TX is
tuned in the opposite direction, and it is full (cross-band) duplex, which you need
to be able to find your own signal. The CAT interface is useful too when you later

add something like a TrakBox to control the doppler shift.

Remember that most of the books/articles were written by people trying
to use
high orbit satellites, where extreme losses occur, so extensive antennas
etc are needed - they won't do you any harm with LEO satellites - but
are not
essential.

You don't need to spend thousands on a large crossed yagi antenna array.
Rx is the main part to concentrate on, and for 70cm a home brew helix
is easy to build, and gives good gain in a short length - short means
you don't
have to have a big tower to mount it on.

For Tx, particularly on 2M, you can compensate for lack of antenna gain
with more power.
Concentrate on getting even coverage of the sky. Of course, once you
have your 70cm
helix array working, tacking a two or three element 2M beam onto the
same positioning
system shouldn't be a big deal - then you can reduce the Tx power.

Use good co-ax, but don't go out an get a second mortgage to buy
hardline, until
and unless you *really* need it. A mast mounted LNA will overcome losses
in the Rx feeder,
ans turning the Tx power up a bit will overcome losses in that
direction.

(Purists will have stopped reading this some time ago, so I feel safe
that the
last paragraph won't cause any heart attacks or strokes :-)

Philip

: Is there a cheap method for decoding Hubble Telescope images?

Go to http://www.stsci.edu/

: Is there a kit to build?

Yes, but its probably illegal.

: What frequency and mode of transmission (WFM, NFM, Spread Spectrum)does
: Hubble use?

I'm pretty sure that HST images are encrypted in order to maintain data access rights for the astronomers involved. Images are usually transmitted to TDRS and then transmitted from there to Goddard or STSCI.

Short answer, you can't get HST imagery from HST yourself.

All of the details are on George's home page at:
http://www5.palmnet.net/~ghunt/
Check it out. Great info!

Now I am wondering whether a dual band mobile rig would do the job like the two Alinco mobile rigs, the DR605 and the DR610, which they say are 9600 baud ready, would work. Details on them can be found at :
http://www.durhamradio.ca/alinco.htm
Both feature rear-panel data jack for easy connection.

Any further comment???

2767. Antenna help wanted

Newsgroup: rec.radio.amateur.space
Date: 1996-12-18 00:00:00 UTC
From: francist@corexco.com
Message-ID: <32b872bf.0@news.total.net>
Source record: 20544

Hi!

I'm currently using a VHF satellite network (Orbcomm) in remote monitoring application. My main problem is the size of the antenna which make it too visible to vandalism and thieft. The antenna I currently use is about 45 inch long and has 4 32 inch long radials. I'm looking for a small/compact antenna that could be hidden easily. Here are some specs:

Frequency range: 138-150 Mhz
Transmitter power: 5 watts
The gain can be unity or more
For some reason, in my application, the antenna need a ground plane (work ok without it anywhere else!!). I might be able to find a way to make it work without it so a built in ground plane is not important.

If anybody knows a manufacturer who has that kind of antenna, or a place where i could find some information about antennas, please E-mail me!

Thanks
Francis Taillon

Newington, CT December 19, 1996
To all radio amateurs

SB SPACE ARL ARLS017
ARLS017 Phase 3D delayed

The European Space Agency has announced a launch delay for Ariane 502, the rocket that is supposed to carry Phase 3D. AMSAT-NA Executive Vice President Keith Baker, KB1SF, reports that the launch has been pushed back to ''early July,'' but said a specific launch date was not yet available. ESA said the change resulted from the recent establishment of a ''detailed timetable'' that's required to permit launch.

A brief ESA news release said: ''As each individual operation will require very close analysis, the 502 campaign is scheduled to begin on Wednesday 9 April 1997, the launch itself being planned for early July.''

''We'll be ready,'' said Baker, adding that the new schedule will give AMSAT ''a little more time to make things right.'' The Phase 3D satellite itself is under assembly in Orlando, Florida. Baker said there's still a lot of work to be done, but the project was on schedule for an April launch. The new launch schedule means that the Phase 3D satellite will not be operational until September or October.

''Obviously we would like to have the satellite in orbit a lot sooner,'' said Baker. ''But we don't want anything to be launched if it's not ready.''

Source record: 20553

I guess I don't understand why you would want to use this as any kind of reliable communications medium. If you want this type of store and forward service, why not use Inmarsat-C? It is inexpensive and has interfaces directly to the internet. The antennas are small, power consumption is very low, and the terminals are pretty much plug and play.

Chris Lewicki, chrisl@gamma1.lpl.arizona.edu writes:
>Go to http://www.stsci.edu/

while this is a good method of obtaining the publicly released low resolution images from the Wide Field/Planetary Camera and Faint Object Camera, it does not include access for the actual much higher resolution data, or data from the other instruments.

>: Is there a kit to build?
>
>Yes, but its probably illegal.

I do hope that was meant in jest. Bottom line is - in theory you *could* build something which would receive signals directly from Hubble, but in practice it's basically impossible (see later)

>: What frequency and mode of transmission (WFM, NFM, Spread Spectrum)does
>: Hubble use?

Hubble's transmits digital high rate data on S-Band frequencies allocated for government communications. The high gain antennas are aimed UP (not towards the ground) where they transmit the data up to one of NASA's Tracking Data and Relay Satellites (TDRS). From TDRS the data goes to the White Sands Ground Station Terminal in New Mexico, and then via a domestic satellite link to the Goddard Space Flight Center in Maryland. At Goddard all of the data is archived, and the spacecraft engineers strip out their engineering and spacecraft maintenance data. The raw science data is sent to the Space Telescope Science Institute via a dediated line.

>I'm pretty sure that HST images are encrypted in order to maintain data access
>rights for the astronomers involved.

Not really encrypted per say, but digitally encoded. And it is kept proprietary for a period of one year from the time the observations are collected. After that point the data is in the public domain and theroetically available for anybody who wants to get access.

>Short answer, you can't get HST imagery from HST yourself.

Source record: 20555

I have a TAPR/AMSAT DSP-93 modem kit that has been professionally assembled. I purchased it this summer from a fellow club member who was overwhelmed with it. It has been assembled and verifed by me on the test bench. I have all paperwork, manuals, box, cables that come with the kit. Since I already have 2 AEA DSP2232s I do not need another TNC. I did really enjoy building the kit however! If you are interested make a resonable offer, or trade, and it's yours. I do not have a fixed price in mind, but I do know what I did pay for the unit. Tnx for your time.

Hi,

I would like to know how the Icom 821H works as a ground station,
especially if the plug and play 9600 bps stuff is true - does it need
surgery to operate at 9600 ? How are the other features for working
with satellites ?

Hi Butch,

The antenna is amazingly simple. See just about any ARRL Antenna
Book or Handbook for pictures.

Mine is wierd as it's in the attic/crawlspace of my apartment. But here
it is..

The first dipole length 468/f and trimmed to resonance using an MFJ-259
SWR Analyzer. I won't give you the exact length as being in an attic =
there
are affects of the surrounding structure on resonance. It is fed with a =
Van
Gorden 1:1 Balun and about 50' of RG-58 (no kidding!) to the shack. I =
usually
never recommend RG-58, but I have the unusual problem of being within
someone else's property. Drilling one hole for three runs of RG-58 (one =
for the
turnstile and two for other antennas) was easier to justify than the =
size that
would have been required for RG-8. They are short runs, so the loss is =
only
around 1.5dB overall.=20

The second dipole is laid across the first, approximating a plus (+) =
sign,
but not touching the feedpoint of the first. The phasing line is 1/4 =
wavelength
of 92 Ohm coax. The phasing line shield and center conductors are =
paralelled
with the 50 Ohm feedline. The output of the phasing line is connected as

usual to the second dipole. I used a Budwig insulator at the feedpoint. =
It's
length is also 468/f. I think the length of each side worked out to be =
99 inches.
The phasing line length is f/234 * cable VF. In this case, the RG-62 I =
used has
a published VF of .86 so the formula worked out to be 234/28.400 =3D =
98.8
inches * .86 =3D 85 inches. I added three inches on each end to allow
for the connections at the feedpoint and feedline. The phasing line was =
looped
into a small circle and held together with a few ty-wraps. Note that I =
used 28.400
as the center frequency. I operate a bunch of 10m phone down in the =
novice/tech
and cw at the bottom portions of the band so I chose the length of both =
dipoles on this. The
match at 29.400 is not bad at all, SWR is less than 1.5:1 over the =
entire 10m
band. A bit more broad than the average dipole.

Make sure the 92 or 100 ohm coax you use for the phasing line is of the
highest quality. I got mine from a local electronic supply house and =
they
had several grades. I chose the most expensive which had a really nice
braid and a solid center conductor.

The 2m version was much easier. I used 1/8" diameter brass rod and used
staggered mounting holes in the top of a 1-1/8" x 1-1/8" x 24" piece of =
furniture
grade cedar with a 12" x 13" x 3/8" piece of scrap plywood for a base. =
The elements
were about 20 inches long so I could prune to resonance (around 19.5 =
inches
for 146.000) and the same coax was used as with the 10m version. The =
phasing
line is 16.5 inches plus only the extra needed to make connections. The =
only difference
between this one and the 10m is each dipole has a 9pF trimmer cap in the =
center
conductor of each coax at the feedpoints for resonance. This is because =
I used
no balun and there is a bit of reactance present from using wood as a =
support and
the staggered element arrangement. The 2m turnstile sits above my desk =
in the living room
and my wife (KD6UFQ) referrs to is as modern art.

good luck! - de kg7fu

I have two high quality direct analog synthesis synthesizers for sale. These are Programmed Test Sources PTS160. They cover .06 to 159,999,999 in steps of 1Hz. They have the built in TCXO or can be referenced to an external source of 5 or 10 MHz. Power is AGCed and can be varied from about 0 to 16 dBm. Switching time is between 5 and 20 microseconds depending on the frequency. All the units have the rack mount and GPIB and parallel interface allowing them to be fully computer controlled. Spurious outputs are down -75dBc(discrete), -35dBc(Harmonics). Phase noise is -63dBc(.5 Hz to 15KHz),-105dBc (100Hz), -115 dBc(1KHz). Power is within 0.5 dB flatness between .1 and 160 MHz. Price is $550 shipped. Current price on identical units is around $7000. These units are surplus from used NMR imaging equipment and are in great shape. For more information please e-mail me. Thanks

Pieter Ibelings

Hi Everyone,

A neighbor of mine has a ham or cb radio, and his transmissions come out over my stereo, telephone, clock radio - anything with a speaker. The FCC won't do anything about it.

I know there are filters you can put on your telephone to block some of the interference. Is there anything like that for stereo equipment?

Thanks,

JOn

jon,ask him to ground everything and do the same.make all your
leads(wires)as short as possible,and/or coil them in small diameters.
if everything else fails and he is not a ham have a stranger cut his
coax.

Source record: 20568

This is a new use of the WWW that can benefit ham radio operators throughout the world.

You can now schedule contacts with hams all over the world simply and easily by using the WWW and e-mail.I have set aside a section of my web site http://www.sarrio.com for hams to post their request for over-the-air schedules. Included in each posting is a place to list the posters specific ham radio contact needs (countries, zones,IOTA, grid squares ect...). The postings will also include an e-mail link that will allow hams that read the posts, to easily request an over-the-air schedule.

How Can Cyberscheds work for me?

Do you need a certain state to complete a WAS award? Are you just a few countries away from a DXCC? Are you a QRP operator looking to make contacts with hams all over the world? Are you a DX station that has grown tired of the stateside pile-ups on 20 meters? Or are you going mobile into a hard to work county?

In all the above examples you could have prearranged cyberscheds with those hams that you want to work. If band conditions are poor just e-mail the hams you could not work and set up a new schedule.

Cyberscheds are a simple way to have the internet work to the benefit of hams all over the world.

All posting will stay on-line for 6 months, or until the posting is asked to be deleted. Below is an example of one cyberpost visit the cyberpost page and view them all. Below is an example of one of the postings:

Station: BV/N0IAT

Name: Joe Fitter
QTH: Taipei, TAIWAN Republic of China
Bands: 40/20/17/15/10
Mode: CW (occasional SSB, but not much)
Comments: Looking for South America, Central America, and Carribean QSO's. I QRV from a
neighbors shack (local law), so operating times are limited to station availability. QSL via my CBA --
I DO NOT accept IRC's or Greenbacks, just please send me your QSL card and a route for returning
the favor.

2792. Wanted: Plans to Build A Quadrifilar Ant. for WEFAX

Newsgroup: rec.radio.amateur.space
Date: 1996-12-23 00:00:00 UTC
From: Bob Berg <bberg@connix.com>
Message-ID: <01bbf0d6.732e43a0$9967f6cd@bob-berg>
Source record: 20569

Hello,
I'm looking for plans to build a Quadrifilar Antenna for WEFAX reception
{137 Mhz}. The one Quorum Communications Sells looks fairly easy to
build but what are the internal connections like?.
Any Help about constuctions plans would be greatly appreciated.
Thanks in Advance!
N1YCH
Bob

2793. Re: Blocking ham/cb interference on stereo equipment?

Newsgroup: rec.radio.amateur.space
Date: 1996-12-23 00:00:00 UTC
From: Ken Wells <kenwells@kiva.net>
Message-ID: <Pine.LNX.3.95.961223123233.15973B-100000@ansel.intersource.com>
Source record: 20570

Interference to consumer electronic devices is seldom the fault of the ham or CB operator. This problem is usually caused by manufacturers who are unwilling to spend a dollar or two to put necessary filters into their designs. Calling the FCC will not solve your problem.

I suggest:

Purchase RFI filters from Radio Shack. These are ferrite cores in a square configuration that are used to wind RF chokes. Take these and wind your speaker wire on them (according to directions) right at the amplifier terminals. You can also add them to the power cables of your appliances which will keep the RF energy from coming in through the power cables. The same can be done for phone lines, although there are special filters built just for phones that you just plug in.

If interference is to your TV/VCR, first check to see that your cables are tight! loose connections are an invitation to interference problems.

This is a start. If your neighbor is a ham, talk to him/her and see if you can build a partnership to solve the problem, rather than making an enemy by blaming him for a problem that is not his fault.

If this person is a CB er, or a ham that is just an appliance operator who does not really understand his own hobby, contact the local Ham Radio club. Someone there might know how to help you.

Good luck,

Ken Wells - NM9P

Matt,

They were most likely using AFSATCOM or FLTSATCOM/LEASAT
(currently being replaced by UHF Follow On (UFO)). Just about
everything on there will by encrypted (KY-57 voice or Minterm/ANDVT
voice/data) There is a good spread on it in the November/December
Satellite Times...

2795. NORAD Two-Line Orbital Element Sets (TLE920)

Newsgroup: rec.radio.amateur.space
Date: 1996-12-24 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <59nhum$h9d@blackbird.afit.af.mil>
Source record: 20472

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

I haven't been keeping up lately, but did AO-13 finally fall to Earth?

I remember reading in QST a while back that it was predicted to enter the atmosphere some time in early December.

2800. Kits for phase-3D?

Newsgroup: rec.radio.amateur.space
Date: 1996-12-24 00:00:00 UTC
From: "Timothy S. Powell" <tpowell@mindspring.com>
Message-ID: <32C01C2A.4A4D@mindspring.com>
Source record: 20477
Cross-posted to: rec.radio.amateur.digital.misc,alt.ham-radio.ssb,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.space

Does anyone know of any 6-meter, 2-meter and 70-cm SSB kits that would be good to use for the Phase-3D sat when it gets in orbit. I'm a college student with limited funds. I would like to work the sat when it get up but can not buy the high price equipment that is needed but would like to build a small sat station if possible.

Thanks

Timothy

Try Down East Microwave; http\\downeastmicrowave.com

They have a lot of neat stuff for VHF/UHF/microwave.

Why don't you call the Military up and ask them to tell you
the frequencies for the military satellites and while you are at it
ask them if their is anything else that they can tell you that is a
threat to the security of this nation.

2806. Weak Signal Protection Proposal

Newsgroup: rec.radio.amateur.space
Date: 1996-12-25 00:00:00 UTC
From: kg7fu <kg7fu@rio.com>
Message-ID: <01bbf28a$e4be3560$LocalHost@surf.rio.com>
Source record: 20483
Cross-posted to: rec.radio.amateur.dx,rec.radio.amateur.space

(Note: This is not intedend to be a "spam", I chose the dx and space = newsgroups
instead of all the rec.radio.amateur. with the intent of gaining = stimulating and
intelligent responses.)

Below is the text of a proposal I'm working on to gain some protection = for
cw/ssb, EME and Satellite subbands in the VHF+ bands (other than what
currently exists for cw and Satellite only).

Please read and comment to:

James Kaplan KG7FU
ARRL Spectrum Committee Member
<kg7fu@rio.com>

You may point your browser to <http://users.aol.com/kg7fu/wsfccbp.htm> = as well.

Thanks in advance for your responses.

de kg7fu

Petition for Rulemaking, draft of Protection for Weak Signal, EME
and Satellite sub-bands.

Whereas, users of the 6m and up bands are experiencing encroachment
by FM Repeaters, Packet Radio, ATV and other modes, and

Whereas, there is currently protection for CW only in the 6m 50.00 - = 50.10 MHz
and 2m 144.00 - 144.10 bands, and

Whereas, it is generally accepted in the Amateur Community that = protection
for a certain mode or sub-band comes from Part 97 of the Commission's = rules,
not from band plans or gentlemen's agreements.

This rulemaking would serve to protect certain band segments from = encroachment
by non-compatible modes, such as FM Repeaters, by removing them from=20
ambiguous status and placing the Commission's strict authority upon = them.

Spectrum management is fast becoming a difficult task in some areas due
to the proliferation of FM Repeaters, Amateur Television, Packet Radio =
and
other modes. While it is accepted that these modes have their place in =
the
Amateur Radio Service, it should be noted that the use of a particular
operating mode should not preclude the use of another mode by others, =
especially
when the two are incompatible.=20

Further, it should be noted with respect to operators of FM, ATV, Packet =
and
other systems, that the use of Weak Signal, EME and Satellite modes is a
minority in the Amateur Community, yet these users provide valuable data =
on
Radio Wave Propagation, Experimental Techniques and New Technologies, =
therefore
should be afforded protection from interference from incompatible modes.

6m 50.00 - 51.00
2m 144.0 - 144.6, 145.8 - 146.00
1.25m 222.00 - 222.25
70cm 432.00 - 433.00, 435.00 - 438.00
33cm 902.00 - 903.00
23cm 1260.00 - 1270.00, 1295.00 - 1300.00
13cm 2303.00 - 2305.00, 2400.00 - 2410.00, 2430.00 - 2438.00

Affected section(s):

97.305(c) 6m, 2m, 1.25m, 70cm, 33cm, 23cm, 13cm

Notes:

The band segments were chosen based on the current ARRL Bandplans.
The bands above 13cm were not included due to the lack of incompatible
modes there currently.

The UHF frequencies for these satellites are published in an available military standard and are unclassified. If you really need to know (you won't be able to decrypt any of it anyhow) then send me a note and I'll send you the title for the specification to request. You will be wasting your time, though.

2813. FOR SALE - GE 19" COLOR TV/VCR COMBO - $250

Newsgroup: rec.radio.amateur.space
Date: 1996-12-26 00:00:00 UTC
From: ccc19380@jetson.uh.edu
Message-ID: <32e7b15f.2645603@news.uh.edu>
Source record: 20490

Hello,

I am selling a GE COLOR TV/VCR 19" COMBO. It is less than 45
days old. I am only selling it because I just bought a sound system
and it need audio/video outputs which this TV does NOT have. This TV
has Audio/Video Inputs and a Cable (Antenna) Jack In. It is a very
nice T.V. to have since the VCR is already built in. Just plug it in
and you are ready to go!!!! Please Reply If Interested. $250

ccc19380@jetson.uh.edu

(Email Only)

buyer must prepay only the shipping charges. i live in Houston, TX

2814. Re: Blocking ham/cb interference on stereo equipment?

Kingfish@voicenet.com (Kingfish) writes:

>Hi Everyone,

>A neighbor of mine has a ham or cb radio, and his transmissions come
>out over my stereo, telephone, clock radio - anything with a speaker.
>The FCC won't do anything about it.

>I know there are filters you can put on your telephone to block some
>of the interference. Is there anything like that for stereo
>equipment?

>Thanks,

>JOn

Jon: What works sometimes depends on the environment. Is you neighbor
in the next single-family dwelling? In the next apartment? Down the street?
Some fixes require filters on the power line. Some require filters on
his transmitter and your receiver. If he is getting into the stereo,
phone and clock radio, it sounds like he is VERY close. For better help,
give us some particulars, please.

Check the scanner news group. rec.radio.scanner. Also look for info on
www.grove.net, where the Monitoring Times and Satellite Times folks have
their pages.

> Why don't you call the Military up and ask them to tell you
>the frequencies for the military satellites and while you are at it
>ask them if their is anything else that they can tell you that is a
>threat to the security of this nation.

By the time he finds someone in the military who knows the answers, and
is clueless enough to tell him, his phone bill will be too large to let him
enjoy the listening hobby.

If it's important enough to keep secret, it will be encrypted. After
all, the other governments know the frequencies, and they DO listen!

Mir's frequencies are:
Uplink (they listen) 145.800
Downlink (you listen) 145.200
Packet (simplex) 145.800

I use STSplus for tracking. It's good. Logsat is good too. There are
others.

2819. mir uhf repeater

Newsgroup: rec.radio.amateur.space
Date: 1996-12-27 00:00:00 UTC
From: perkiert@nildram.co.uk
Message-ID: <32c43bdb.0@scooby.nildram.co.uk>
Source record: 20496

I gather that mir has a uhf amateur repeater Is it 437.950 or 437.930
MHz Today (27 December 1996)
at 17:35 I heard a Xmas greeting message I also heard what sounded
like a burst of packet data. I
would be interested in any information regarding the amateur radio
activity on mir, I have a handy
talky for 430Mhz band it has no tone squelch and the repeater shift is
600khz for Europe so I think
I will only be listening.. Am I likley to hear a beacon if the
repeater is not active?

Thanks and happy new year to all.

Well Amsat Journal is RIGHT but the MIR station decided
after the fact to change.

We have two large repeaters in Dallas on 145.190 and 145.210
and that makes it a problem to catch the voice downlink.

The downlink where you listen for voice is 145.200, your uplink is
145.800.

Packet is simplex on 145.800

>Timothy
>KD4IKY

Well, lets see what you need. For mode U/V (the old mode B), you'll need a 70cm Tx and a 2m Rx. Now an easy way to get these is with transverters from a 10m rig (or an old SSB CB). The latter can be had cheap if you don't already have something for 10m. You don't have to convert it, you can choose the crystals in the transverters to go direct to and from CB frequencies. You'll want to mod it to allow enough RIT range to cover between channels, and to allow XIT as well. This is usually pretty easy to do. Down East Microwave sells suitable transverter kits, or you can build from scratch based on the designs in the RSGB VHF/UHF Dx Book. A preamp will be needed, and the ARRL Handbook and the Proceedings of the Central States VHF Conference (available from ARRL) have several suitable designs.

Another approach is to build a 2m Rx and 70cm Tx. The Rick Campbell R2 and T2, described in a QST series and in newer Handbooks, are suitable for this. Kanga sells kits, but these radios are simple enough to build dead bug style. The R2 and T2 are universal designs which can be made to work from LF up through UHF (up to 500 MHz anyway). They use the phasing method to generate SSB and to obtain single signal reception. You have to supply the LO. A VXO and multiplier should do fine. You can find suitable VXO designs in the Handbook. A good mast mount preamp will be required for receive, and any of the ones referenced above should work fine. You'll need a PA for the Tx. RF Parts sells suitable brick amps, as does Down East Microwave. Depending on antenna gain, you'll need from 10 watts to 100 watts uplink power. Err on the side of too much, you can turn it down if you wind up louder than the beacon.

(Note that you can set the R2 and T2 up for 10m and use transverters, as with the CB set recomendation above, if you prefer. There are some advantages to this approach, though it adds some complexity and cost.)

If you'd like to try your hand at digital via the satellite. A suitable receiver for 9600 baud on P3D and the Microsats can be made from a GE UHF Exec II or Mastr II receive strip. Use the temperature compensation input of the Icom (channel element) for doppler tracking. These Rx strips can be found at hamfests for $25, or $50 for a complete radio. The UHF Tx strip can be used as a CW transmitter for mode U/V as is. With 80 watts output, they do great. For data uplink, a VHF version of the Tx strip can be modified for 9600 baud. Disable the PM modulator and use the temperature compensation input to the Icom for modulation (or rewire to use a Motorola channel element and modulate that, it's a bit more linear).

If you prefer to scratch build the FM setup, a receiver based on the MC13135 receiver subsystem chip, and a Tx based on the MC2833 exciter chip, are pretty easy to do. Add a power brick from RF Parts, and you're on your way. Converting the business band radios is so easy and cheap, though, it is really the better way to go.

P3D will have many more modes. Setting up for them will require either more transverters or more radios. Mode U/V and the Microsat style 9600 baud digital mode will likely the be the most popular in the beginning, however, because everyone equipped for Oscar 10 and Oscar 13 will already be set for mode U/V and all the Microsat ground stations will be set for 9600 baud data.

You'll need a pair of steerable yagis or helixes, for mode U/V. You can build these yourself and save a bunch of money. When the sat is near apogee, it hangs in virtually the same spot in the sky for long periods, so you can aim the antennas by hand, no need for auto-tracking, or even for rotators. The antennas don't have to be very high off the ground, since they are looking up. You can use a tripod or post mount and turn them directly by hand as needed. The antennas can be made from a length of 2x2 and use aluminum clothesline wire for elements. There are a number of antenna programs available on the net which can optimize the design for you.

It doesn't have to cost gobs of money to get on the satellites if you use a little ingenuity. You can be on the digital birds for under $100, or on U/V SSB for a bit over $300, if you scrounge and adapt a bit.

2826. Got a Nice Visual on Mir

Newsgroup: rec.radio.amateur.space
Date: 1996-12-28 00:00:00 UTC
From: KD1YV <jimkd1yv@ix.netcom.com>
Message-ID: <32C565BB.3B0C@ix.netcom.com>
Source record: 20503

On the evening of 27 Dec on a pass that peaked at 17:13 EST, I had a nice visual sighting of Mir. There was cloud cover to my west, but as soon as it cleared them, I had a nice view from near 50 degrees elevation until it disappeared over my horizon to the ESE. It was neat - the first time that I have seen it. I tried some 7x50 binoculars, though they didn't help too much.

I used STSPLUS to predict the orbits.

Hi Travis,

MIR also has a 70cm FM repeater onboard, it just went on the air. The January 1997 issue of QST has the into on page 51. The voice uplink frequency is 435.750 MHz and the downline is 437.950 MHz with a141.3 CTCSS tone. This is an odd split, but your Yaesu owners manual tells you how to set it up (on page 31 "Storing Independent Transmit Frequencies"). The repeater callsign is RR0LL. QST reports, and I quote, "Its signal is so loud that it can be easily heard with H-Ts and "rubber duck" antennas. In fact, a number of hams have worked it with H-Ts."

I've not heard it for a few days, but I've not been waiting by the radio for each pass, either.

I use tracksat v3.1. It is FREE and works very well. E-mail me and I'll tell you where you can get it. AMSAT-NA provides the orbital elements in the 2-line format required by tracksat.

(I'm an unverified sender because I'm using the Internet at a college lab)
$
$ $ DO NOT THROW THIS LETTER AWAY, JUST TRY $
$
$
$ $ IT, I DID AND I ALREADY HAVE OVER $1000.$
$
$
$ (Is this legal?>>>GO TO END OF
DOC!!!!)
$
I was once a doubting Thomas also, one who never thought any of those
schemes worked or where even legal. But after hearing so much about it
and
all those testimonials I thought HEY, WHY NOT TRY! And I did. After 2
week
I received several thousand dollars. After four weeks my local mailman
suggested if I am going to expect such a volume of mail I should open a
post office box, A LARGE ONE! Now with the Internet this money making
idea
gets even better. Why do you see so many of these get rich quick messages
on the Internet? IT REALLY WORKS. Besides whats $5, Consider it an
investment. Take this advice, if it doesn't recover your time and money,
don't try it again.

Testimonials from others who have tried this idea have reported FANTASIC
results. Markus Valppu says he made $53,664 doing this, Dan Stepstone
made
$17,000 in this perfectly legal and simple plan.

****
This works, I did it and have already received $682.00 in the past week.
****
Hello! I've got some awesome news that I think you need to take two
minutes to read if you have ever thought "How could I make some
serious cash in a hurry???" , or been in serious debt, ready to do
almost anything to get the money needed to pay off those bill
collectors. So grab a snack, a warm cup of coffee, or a glass of your
favorite beverage, get comfortable and listen to this interesting,
exciting find!
Let me start by saying that I FINALLY FOUND IT! That's right!. I
found it! And I HATE GET RICH QUICK SCHEMES!! I hate those schemes
like multi-level marketing, mail-order schemes, envelope stuffing
scams, 900 number scams... the list goes on forever. I have tried
every darn get rich quick scheme out there over the past 12 years. I

somehow got on mailing lists for people looking to make money (more like 'desperate stupid people who will try anything for money!'). Well, when I was a teenager, these claims to 'get me rich quick' sounded irresistible! I would shell out $14.95 here, $29.95 there, $24.95 here, and another $49.95 there. I had maxed out my new Circuit City Card AND my Visa...I was desperate for money!! So, I gave them all a chance but failed at every one of them! Maybe they worked for some people, but not for me. Eventually, I just tossed that JUNK MAIL in the trash when I got the mail. I recognized it right away. I can smell a money scam from a mile away these days, SO I THOUGHT.... I thought I could sniff out a scam easily. WAS I WRONG!! ....I LOVE THE INTERNET!!!

I was scanning thru a NEWSGROUP and saw an article stating to GET CASH FAST!! I thought..."Here on the Internet?? Well, I'll just have to see what schemes could possibly be on the internet." The article described a way to MAIL A ONE DOLLAR BILL TO ONLY FIVE PEOPLE AND MAKE $50, 0000 IN CASH WITHIN 4 WEEKS! Well, the more I thought about it, the more I became very curious. Why? Because of the way it worked AND BECAUSE IT WOULD ONLY COST ME FIVE DOLLARS (AND FIVE STAMPS), THAT'S ALL I EVER PAY....EVER!!

Ok, so the $50,000 in cash was maybe an tough amount to reach, but it was possible. I knew that I could at least get a return of $1,000 or so. So I did it!! As per the instructions in the article, I mailed out ('snail mail'for you e-mail fanatics) a single dollar bill to each of the five people on the list that was contained in the article. I included a small note, with the dollar, that stated "Please Add Me To Your List." I then removed the first position name of the five names listed and moved everyone up one position, and I put my name in position five of the list. This is how the money starts rolling in! I then took this revised article now with my name on the list and REPOSTED IT ON AS MANY NEWSGROUPS AND LOCAL BULLETIN BOARD MESSAGE AREAS THAT I KNEW. I then waited to watch the money come in...prepared to maybe receive about $1000 to $1500 in cash or so.... But what a welcome surprise when those envelopes kept coming in!!! I knew what they were as soon as I saw the return addresses from people all over the world-Most from the U.S., but some from Canada, even some from Australia! I tell you, THAT WAS EXCITING!! So how much did I get in total return? $1000? $5000? Not even!!! I received a total of $23,343!!! I couldn't believe it!!

I now have a brand new black Acura Integra to speak for, due to this!! Now after almost 8 months, I am ready to do it again!!! So maybe it was possible to get $50,000 in cash, I don't know, but IT COMPLETELY DEPENDS ON YOU, THE INDIVIDUAL! You must follow through and repost this article everywhere you can think of! The more postings you achieve will determine how much cash will arrive in your very own mailbox!! It's just too easy to pass up!!!

Let's review the reasons why you should do this: The only cost factors are for the five stamps, the 5 envelopes and the 5 one dollar bills that you send out to the listed names by snail mail (US Postal Service Mail). Then just simply repost the article (WITH YOUR NAME ADDED) to all the newsgroups and local BBS's you can. Then sit back and, (ironically), enjoy walking (you can run if you like! :o) down your driveway to your mailbox and scoop up your rewards!! We all have five dollars to put into such an easy effortless investment with SPECTACULAR REALISTIC RETURNS OF $15,000 to $25,000 in about 3-5 weeks! So HOLD OFF ON THOSE LOTTERY NUMBERS FOR TODAY,EAT AT HOME TONIGHT INSTEAD OF TAKEOUT FROM McDONALDS AND INVEST FIVE DOLLARS IN THIS AMAZING MONEY MAKING SYSTEM NOW!!! YOU CAN'T LOSE!!

So how do you do it exactly, you ask? I have carefully provided the mostdetailed, yet straightforward instructions on how to easily get this underway and get your cash on its way. SO, ARE YOU READY TO MAKE SOME CASH!!!?? HERE WE GO!!!

*** THE LIST OF NAMES IS AT THE END OF THIS ARTICLE. ***

OK, Read this carefully. Get a printout of this information, if you like, so you can easily refer to it as often as needed.

INSTRUCTIONS:

1. Take a sheet of paper and write on it the following: "Please add my name to your list". This creates a service out of this money making system and thus making it completely legal. You are not just randomly sending a dollar to someone, you are paying one dollar for a legitimate service. Make sure you include your name and address. I assure you that, again, this is completely legal! For a neat little twist, also write what slot their name was in: "You were in slot 3", Just to add a little fun! This is all about having fun and making money at the same time!

2. Now fold this sheet of paper around a dollar bill ,(no checks or money orders), and put them into an envelope and send it on its way to the five people listed. The folding of the paper around the bill will insure its arrival to its recipient. THIS STEP IS IMPORTANT!!

3. Now listen carefully, here's where you get YOUR MONEY COMING TO YOUR MAILBOX. Look at the list of five people; remove the first name from position one and move everyone on the list up slot one on the list. Position 2 name will now move to the position 1 slot , position 3 will now become position 2, 4 will be be 3, 5 wil be 4. Now put your name, address, zipcode AND COUNTRY in position 5, the bottom position on the list.

4. Now upload this updated file to as many newsgroups and local bulletin boards' message areas & file section as possible. Give a catchy description of the file so it gets noticed!! Such as: "NEED FAST CASH?, HERE IT IS!" or "NEED CASH TO PAY OFF YOUR DEBTS??", etc. And the more uploads, the more money you will make, and of course, the more money the others on the list will make

too. LET'S ALL TAKE CARE OF EACH OTHER BY BEING HONEST AND BY PUTTING FORTH 120 PERCENT INTO THIS PROFITABLE & AMAZING SYSTEM!!! You'll reap the benefits, believe me!!! Set a goal for the number of total uploads you'll post, such as 15-20 postings or more! Always have a goal in mind!!! If you can UUE encode the file when uploading, that will make it easier for the people to receive it and have it downloaded to their hard drive. That way they get a copy of the article right on their computer without hassles of viewing and then saving the article from the File menu. Don't alter the file type, leave it as an MS-DOS Text file. The best test is to be able to view this file using Microsoft's Notepad for Windows 3.x or WordPad for Windows '95. If the margins look right without making the screen slide left or right when at the ends of the sentences, you're in business!

5. If you need help uploading, simply ask the sysop of the BBS, or "POST" a message on a newsgroup asking how to post a file, tell them who your Internet provider is and PEOPLE WILL ALWAYS BE GLAD TO HELP. I would try to describe how to do it but there are simply too many internet software packages with slightly different yet relatively simple ways to post or upload a file. Just ask for help or look in the help section for 'posting'. I do know that for GNN, you simply select 'POST' then enter a catchy description under the subject box, choose 'ATTACH', selecting 'UUE' and NOT 'TXT', then choose 'Browse' to go look for the file. Find your text file CASH.TXT and click on it and choose 'OK'. Place a one line statement in the main body section of the message post screen. Something like "Download this to read how to get cash arriving in your mailbox with no paybacks!" or whatever. Just make sure it represents its true feasibility, NOT something like..."Get one million dollars flooding in your mailbox in two days!"

You'll never get ANY responses!

6. And this is the step I like. JUST SIT BACK AND ENJOY LIFE BECAUSE CASH IS ON ITS THE WAY!! Expect to see a little money start to trickle in around 2 weeks, but AT ABOUT WEEKS 3 & 4, THE MONEY STORM WILL HIT YOUR MAILBOX!! All you have to do is take it out of the mailbox and try not to scream too loud (outside anyway) when you realize YOU HIT THE BIG TIME AT LAST!!

7. So go PAY OFF YOUR BILLS AND DEBTS and then get that something special you always wanted or buy that special person in your life (or the one you want in your life) a gift they'll never forget. ENJOY LIFE!

8. Now when you get low on this money supply, simply re-activate this file again; Reposting it in the old places where you originally posted and possibly some new places you now know of. Don't ever lose this file, always keep a copy at your reach for when you ever need cash. THIS IS AN INCREDIBLE TOOL THAT YOU CAN ALWAYS RE-USE TIME AND TIME AGAIN WHEN CASH IS NEEDED!

People have asked, "What if the plan is played out and none sends you any money?" So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the Internet everyday and are willing to give it a try?!? Estimates are 20,000 to 50,000 new users EVERYDAY!!! Remember, play FAIR and HONEST, and THIS WILL WORK, I PROMISE YOU!!! You just have to be honest. Make sure you print this article out RIGHT NOW! ! ! Also, keep a list of everyone
who sends you money and always keep an eye on the newsgroups postings to make sure everyone is playing fair.

FINAL THOUGHT
In order for this system to work and remain legal, you have to follow the steps and send your $5. Honesty is always the best policy. Good luck, have fun and make some serious money!!!!!

Proof:
This arraignment does not constitute a "chain letter" under US Title 18 Code section1302. Because you are purchasing a service.

>would like to build a small sat station if possible.
>Timothy
>KD4IKY

Well, lets see what you need. For mode U/V (the old mode B), you'll need a 70cm Tx and a 2m Rx. Now an easy way to get these is with transverters from a 10m rig (or an old SSB CB). The latter can be had cheap if you don't already have something for 10m. You don't have to convert it, you can choose the crystals in the transverters to go direct to and from CB frequencies. You'll want to mod it to allow enough RIT range to cover between channels, and to allow XIT as well. This is usually pretty easy to do. Down East Microwave sells suitable transverter kits, or you can build from scratch based on the designs in the RSGB VHF/UHF Dx Book. A preamp will be needed, and the ARRL Handbook and the Proceedings of the Central States VHF Conference (available from ARRL) have several suitable designs.

Another approach is to build a 2m Rx and 70cm Tx. The Rick Campbell R2 and T2, described in a QST series and in newer Handbooks, are suitable for this. Kanga sells kits, but these radios are simple enough to build dead bug style. The R2 and T2 are universal designs which can be made to work from LF up through UHF (up to 500 MHz anyway). They use the phasing method to generate SSB and to obtain single signal reception. You have to supply the LO. A VXO and multiplier should do fine. You can find suitable VXO designs in the Handbook. A good mast mount preamp will be required for receive, and any of the ones referenced above should work fine. You'll need a PA for the Tx. RF Parts sells suitable brick amps, as does Down East Microwave. Depending on antenna gain, you'll need from 10 watts to 100 watts uplink power. Err on the side of too much, you can turn it down if you wind up louder than the beacon.

(Note that you can set the R2 and T2 up for 10m and use transverters, as with the CB set recomendation above, if you prefer. There are some advantages to this approach, though it adds some complexity and cost.)

If you'd like to try your hand at digital via the satellite. A suitable receiver for 9600 baud on P3D and the Microsats can be made from a GE UHF Exec II or Mastr II receive strip. Use the temperature compensation input of the Icom (channel element) for doppler tracking. These Rx strips can be found at hamfests for $25, or $50 for a complete radio. The UHF Tx strip can be used as a CW transmitter for mode U/V as is. With 80 watts output, they do great. For data uplink, a VHF version of the Tx strip can be modified for 9600 baud. Disable the PM modulator and use the temperature compensation input to the Icom for modulation (or rewire to use a Motorola channel element and modulate that, it's a bit more linear).

If you prefer to scratch build the FM setup, a receiver based on the MC13135 receiver subsystem chip, and a Tx based on the MC2833 exciter chip, are pretty easy to do. Add a power brick from RF Parts, and you're on your way. Converting the business band radios is so easy and cheap, though, it is really the better way to go.

P3D will have many more modes. Setting up for them will require either more transverters or more radios. Mode U/V and the Microsat style 9600 baud digital mode will likely the be the most popular in the beginning, however, because everyone equipped for Oscar 10 and Oscar 13 will already be set for mode U/V and all the Microsat ground stations will be set for 9600 baud data.

You'll need a pair of steerable yagis or helixes, for mode U/V. You can build these yourself and save a bunch of money. When the sat is near apogee, it hangs in virtually the same spot in the sky for long periods, so you can aim the antennas by hand, no need for auto-tracking, or even for rotators. The antennas don't have to be very high off the ground, since they are looking up. You can use a tripod or post mount and turn them directly by hand as needed. The antennas can be made from a length of 2x2 and use aluminum clothesline wire for elements. There are a number of antenna programs available on the net which can optimize the design for you.

It doesn't have to cost gobs of money to get on the satellites if you use a little ingenuity. You can be on the digital birds for under $100, or on U/V SSB for a bit over $300, if you scrounge and adapt a bit.

Having recently discovered FM activity through sattelites, I'd like to try my hand at getting through the FM repeater on the Mir space station. Unfortunately, my UHF rig (a Kenwood TM-401B) only covers 440-450 MHz. Is there a mod available to allow this rig to operate below 440 MHz?
BTW -- the Japanese TM-401 apparently oerated from 430-450 MHz, judging by some of the Japanese WWW pages.

Thanks for any help

Can't find any pricing information on the PC-Sat home page. Planet
Connects home page is http://www.planetc.com/pc.htm

Their pricing seems to be in the same range as DirecPC, although they
aren't real clear on whether they offer standard internet connections.
They talk a lot about BBS and FidoNet, and only mention the internet
in passing. Furthermore I can't find where they describe how upstream
is handled. I'm guessing you don't transmit upstream via the dish, so
it must rely on a telephone connection for upstream.

DirecPC allows you to use your current ISP for upstream, and
downstream comes over the satellite. Planet Connect don't seem to go
into any details on this. Anyone using them care to comment?

And with nationwide APRS activity on 145.79, that's a problem for many, as well. Folks in Indianapolis want APRS to move from it's coordinated frequency. Seems like MIR could have researched a bit and tried to coordinate before they moved.

2843. WinTrak Pro Release

Newsgroup: rec.radio.amateur.space
Date: 1996-12-29 00:00:00 UTC
From: "Paul E. Traufler" <wintrak@traveller.com>
Message-ID: <01bbf5e1$cbe12fc0$51ae1ace@traveller.com.traveller.com>
Source record: 20431

WinTrak Pro New Release!

WinTrak Pro Version 4.5 has added and improved many areas in the program. The Rendered views have been improved along with several new views available also. This is just a small list of the many improvements made to the program. Remember this program is a full 32-bit version, do not accept any substitutions! Do not let those other programs fool you with the old, "It works under Win95", but in reality it is a Windows 3.1 16-bit program. Its your money, demand the best!

New Items:

Visible now satellites can be any of the 4 satellite groups.
Satellite elements statistics, such as oldest, newest and average age of elements.
Zoom in on the Render views.
Added plot the next 2 passes option to render views.
Automatic LF to CR-LF text file detection and correction. (UNIX to DOS Text conversion)
Mercator map added to the Rendered maps options.
Added Multi-Satellite 3D and Mercator maps Rendered views.
Added satellite labels to Rendered views.
Added option to set Sun terminator on the Render views.
Added satellite Rise/Set alarms, can play user recorded Wave files or provided Wave files.
Greatly improved help file with printed manual options included in help file.
Lowered the minimum satellite altitude to 90 km from the past 160 km.
This version works with Windows NT 4.0 now also.

>~~~~~~~~~~~~~~~~~~~~~~~~~~~~~
Mark, The first times I've tried to hear it were the last two
passes and there was nothing to be heard. Could it be a lack
of activity, or does the operator turn it off due to power
budget requirements?....Anyone know?

"WE'RE BACK", "DXER.COM" "Your Ham Radio Resource Site"
is back on line and ready to provide you with the most
comprehensive ham radio related site on the Internet...

Stop by and check it out..29 indexes. Everything from
DX Clubs, EME, Packet Radio, Scanners, Shortwave, QRP,
Maritime, Callbooks, Contest Calendars, Software, Clusters.
Radio Modifications, Sarex, Mir, MARS and many others.
Many more links have been added and we are now approaching
500 links, with more to come...

In addition to the interactive BBS, we will be adding in
the near future a Ham E-Mail Callbook...

Stop on by "http://www.dxer.com" and let us know what you
think, and what you would like to see added to the ever
growing list of links..

2848. Got a Nice Visual on Mir

Newsgroup: rec.radio.amateur.space
Date: 1996-12-29 00:00:00 UTC
From: KD1YV <jimkd1yv@ix.netcom.com>
Message-ID: <5a4nm0$5b2@nr1.vancouver.istar.net>
Source record: 20515

On the evening of 27 Dec on a pass that peaked at 17:13 EST, I had a nice visual sighting of Mir. There was cloud cover to my west, but as soon as it cleared them, I had a nice view from near 50 degrees elevation until it disappeared over my horizon to the ESE. It was neat - the first time that I have seen it. I tried some 7x50 binoculars, though they didn't help too much.

I used STSPLUS to predict the orbits.

2849. MIR info..

Newsgroup: rec.radio.amateur.space
Date: 1996-12-29 00:00:00 UTC
From: dfrandin@vegas.infi.net
Message-ID: <5a4nk2$3om@nw101.infi.net>
Source record: 20516

For the last several weeks I've tried on several high (40+ degree) passes to hear some sort of rf out of mir, w/o any luck.. I'm using STSPlus with a fresh KEP file (TLE920.. The latest, I believe), and have been able to *see* mir at least once during this time on a visual pass, but everytime, the freqs I'm scanning are stone-cold dead... They are: 143.625 (the beacon), 145.200 (the voice d/l) and 437.950 (the repeater output) I've seen many claim that MIR can be easily heard with a rubber-duck on high-inclination orbits.. I'm using a Radio Shack PRO37 with a magmount antenna mounted outside the house. Am I just very unlucky or am I jinxed, equipment-wise?? Does the repeater remain on at all times or do they shut it off during work/sleep periods, and does the .625 beacon still operate???

Thanx,
Dave Frandin, WA6QNW

Hi Travis,

MIR also has a 70cm FM repeater onboard, it just went on the air. The January 1997 issue of QST has the into on page 51. The voice uplink frequency is 435.750 MHz and the downline is 437.950 MHz with a141.3 CTCSS tone. This is an odd split, but your Yaesu owners manual tells you how to set it up (on page 31 "Storing Independent Transmit Frequencies"). The repeater callsign is RR0LL. QST reports, and I quote, "Its signal is so loud that it can be easily heard with H-Ts and "rubber duck" antennas. In fact, a number of hams have worked it with H-Ts."

I've not heard it for a few days, but I've not been waiting by the radio for each pass, either.

I use tracksat v3.1. It is FREE and works very well. E-mail me and I'll tell you where you can get it. AMSAT-NA provides the orbital elements in the 2-line format required by tracksat.

Doesn't look to me like these folks are aiming at the consumer market
in the same way that DirecPC are. Do they even offer internet access
to individuals over their satellite service - I can't find any prices
for setup and monthly charges.

Anyone here using them care to comment?

Planet Connect and Skylink - Both from Planet Systems; The folks
that bring you Sho at Home Network

PC-Sat http://www.pc-sat.com who recently took over Page sat operations

I know there are others, but these came to mind. I have been trying to
remember
planet connects web site, but can't recall it.

Happy hunting

About 8 months ago I looked into this ... they send usenet feeds via
satellite, so you could get newsgroups, but couldn't get web service
like DirectPC promises.

TPS are running off the Eutelsat satellite at 13 degrees east.
You're right, it can't be seen in the USA.
I orriginally posted this in reply to your message in a group that is
aimed primarily at European satellite TV, but I see that the orriginal
message was posted quite widely.

TPS are really only intended for France, but the signal can be picked
up all over Europe.
They haven't made much noise about their Internet plans yet as its
still early days.
It should probably use the same kind of technology as Direc PC.

Hello all ,
Just had a nice short contact with John KC5TZQ at 16:07 30-12-96
. It must be said that John is a very good operator as he worked several
stations over Europe , He also informed us that as of the first of
January 1997 they will change freq on 2meters as follows .

mir tx 145.800
mir rx 145.200

ie the reverse of now !!.

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

>
>We have two large repeaters in Dallas on 145.190 and 145.210
>and that makes it a problem to catch the voice downlink.

And with nationwide APRS activity on 145.79, that's a problem for many, as well. Folks in Indianapolis want APRS to move from it's coordinated frequency. Seems like MIR could have researched a bit and tried to coordinate before they moved.

From: "Paul E. Traufler" <wintrak@traveller.com>
Subject: WinTrak Pro Release

WinTrak Pro New Release!

WinTrak Pro Version 4.5 has added and improved many areas in the program. The Rendered views have been improved along with several new views available also. This is just a small list of the many improvements made to the program. Remember this program is a full 32-bit version, do not accept any substitutions! Do not let those other programs fool you with the old, "It works under Win95", but in reality it is a Windows 3.1 16-bit program. Its your money, demand the best!

New Items:

Visible now satellites can be any of the 4 satellite groups.
Satellite elements statistics, such as oldest, newest and average age of elements.
Zoom in on the Render views.
Added plot the next 2 passes option to render views.
Automatic LF to CR-LF text file detection and correction. (UNIX to DOS Text conversion)
Mercator map added to the Rendered maps options.
Added Multi-Satellite 3D and Mercator maps Rendered views.
Added satellite labels to Rendered views.
Added option to set Sun terminator on the Render views.
Added satellite Rise/Set alarms, can play user recorded Wave files or provided Wave files.
Greatly improved help file with printed manual options included in help file.
Lowered the minimum satellite altitude to 90 km from the past 160 km.
This version works with Windows NT 4.0 now also.

Fellow Amateurs: Please read the first two paragraphs!

CLAWSON@TELEGRAFIX.COM (PAT CLAWSON) said to ALL in comp.bbs.misc:

Boardwatch may have abandoned the BBS sysop, but TeleGrafix is still standing strong with them. However, we think that BBS systems must become Internet-connected if they are to survive in a Webbed world.

First, we need to quit calling these online systems by the moniker "BBS." The term has come to reflect something on the order of ham radio -- low-rent communications run by amateurs. That may accurately reflect some BBS systems, but we've found that many sysops run very professional online businesses.

Second, we need to start emphasizing the Power of Telnet and talk about Telnet Sites, not BBS systems. A telnettable BBS or legacy system can do many things the Web can't. Most of the computer industry and public has been Web-washed (brainwashed) by all the press hype. They think the Web is all there is to the Internet/online experience. Just a couple of days ago, I was talking to the Internet reporter for one of America's most prestigious newspapers. He had never even heard of Telnet, didn't have a clue what it was -- and his news reports influence literally millions of Americans. BBS sysops and BBS system manufacturers need to refocus their efforts, and begin producing tools and content that take advantage of the Power of Telnet.

Third, Telnet Site operators (such as BBS sysops) must professionalize the look and feel of their systems. Most sysops make little investment in quality graphics for their systems. In a glitzy Web world, it is little wonder that the public is turned off by ANSI BBS systems no matter how if the content on them is of high quality. We constantly hear BBS sysops complain about having to pay what are very modest sums of money for RIPscrip graphics -- but the people running Web sites don't think twice about investing thousands of dollars for a fabulous look.

Despite all the flack we take from BBS sysops, we continue to support their efforts -- and we always will. But BBS sysops have to change with the times, and they have to be willing to invest to upgrade their systems to compete with (or complement) the Web.

On Christmas, TeleGrafix released the first multimedia Telnet browsers. RIPtel Visual Telnet is available now from our Web site at www.telegrafix.com. This is a huge step forward for the Internet, and it represents a salvation for BBS sysops by placing Telnet graphically on a higher level than the Web.

The serious professional operators will get on board the Visual Telnet train, and they will live to see a brighter day.

The "players" ie Dave Larson N6JLH alias N6CO alias K6MIR and Miles Mann WF1F were told well in advance that this was going to be a problem with not only APRS, but also the Repeaters, they in turn I would assume notified their contacts at AMSAT and ARRL and NASA and SOUP, at any rate G3BGM also was told that especially here in the states that pair would be a problem, and it was taken to the European Amateur radio conference where the frequencies were decided upon. I realized long ago that the doppler shift would bring it into interference with both, and it does.. there is little hope. there is a possibility they may try another pair, but slim. 73 DAVE

Subject: new mir freq for 1997

Hello all ,
Just had a nice short contact with John KC5TZQ at 16:07 30-12-96
. It must be said that John is a very good operator as he worked several
stations over Europe , He also informed us that as of the first of
January 1997 they will change freq on 2meters as follows .

mir tx 145.800
mir rx 145.200

ie the reverse of now !!.

From: tkelso@afit.af.mil (TS Kelso)
Subject: NORAD Two-Line Orbital Element Sets (TLE922)

The most current orbital elements from the NORAD two-line element sets are
carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are
also available on this system.

Element sets (also updated daily) and some documentation and software are
available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the
directory pub/space.

As a service to the satellite user community, the most current of these
elements are uploaded weekly to sci.space.news and rec.radio.amateur.space.
This week's elements are provided below.

From: Susan Driggers <Insight@cris.com>
Subject: Total Newbie Looking for help

I am totally new to satellite communications and am looking for some
advice on the bare minimum needed to get started. I am operating on a very
restricted budget so anything that could be homebrewed would be
appreciated.
I currently have a HT 202 that I am dedicating to sattelite. Everything
else I will need advice on. THanks !

Subject: mir comms problems

I see on Hearsat mail list that there have been problems on the mir
communications, Has that effected Amateur Radio activities I wonder?

The "players" ie Dave Larson N6JLH alias N6CO alias K6MIR and Miles
Mann WF1F were told well in advance that this was going to be a
problem with not only APRS, but also the Repeaters, they in turn I
would assume notified their contacts at AMSAT and ARRL and NASA and
SOUP, at any rate G3BGM also was told that especially here in the
states that pair would be a problem, and it was taken to the European
Amateur radio conference where the frequencies were decided upon. I
realized long ago that the doppler shift would bring it into
interference with both, and it does.. there is little hope. there is a
possibility they may try another pair, but slim. 73 DAVE

Subject: MIR info..

Dave, try 145.200 + 600 voice, 145.800 simplex paket,
437950 - 2200 pl 141.3 repeater, and 437.925 for a recorded
greeting from Mir. Good luck, and have fun.

Subject: new mir freq for 1997

Hello all ,
Just had a nice short contact with John KC5TZQ at 16:07 30-12-96
. It must be said that John is a very good operator as he worked several
stations over Europe , He also informed us that as of the first of
January 1997 they will change freq on 2meters as follows .

mir tx 145.800
mir rx 145.200

ie the reverse of now !!.
73 de Dave EI4HT and Jim EI3DP .

From: tkelso@afit.af.mil (TS Kelso)
Subject: NORAD Two-Line Orbital Element Sets (TLE922)

The most current orbital elements from the NORAD two-line element sets are
carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are
also available on this system.

Element sets (also updated daily) and some documentation and software are
available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the
directory pub/space.

As a service to the satellite user community, the most current of these
elements are uploaded weekly to sci.space.news and rec.radio.amateur.space.
This week's elements are provided below.

From: Susan Driggers <Insight@cris.com>
Subject: Total Newbie Looking for help

I am totally new to satellite communications and am looking for some
advice on the bare minimum needed to get started. I am operating on a very
restricted budget so anything that could be homebrewed would be
appreciated.
I currently have a HT 202 that I am dedicating to sattelite. Everything
else I will need advice on. THanks !

Subject: Please Read!

Fellow Amateurs: Please read the first two paragraphs!

CLAWSON@TELEGRAFIX.COM (PAT CLAWSON) said to ALL in comp.bbs.misc:

Boardwatch may have abandoned the BBS sysop, but TeleGrafix is still standing strong with them. However, we think that BBS systems must become Internet-connected if they are to survive in a Webbed world.

First, we need to quit calling these online systems by the moniker "BBS." The term has come to reflect something on the order of ham radio -- low-rent communications run by amateurs. That may accurately reflect some BBS systems, but we've found that many sysops run very professional online businesses.

Second, we need to start emphasizing the Power of Telnet and talk about Telnet Sites, not BBS systems. A telnettable BBS or legacy system can do many things the Web can't. Most of the computer industry and public has been Web-washed (brainwashed) by all the press hype. They think the Web is all there is to the Internet/online experience. Just a couple of days ago, I was talking to the Internet reporter for one of America's most prestigious newspapers. He had never even heard of Telnet, didn't have a clue what it was -- and his news reports influence literally millions of Americans. BBS sysops and BBS system manufacturers need to refocus their efforts, and begin producing tools and content that take advantage of the Power of Telnet.

Third, Telnet Site operators (such as BBS sysops) must professionalize the look and feel of their systems. Most sysops make little investment in quality graphics for their systems. In a glitzy Web world, it is little wonder that the public is turned off by ANSI BBS systems no matter how if the content on them is of high quality. We constantly hear BBS sysops complain about having to pay what are very modest sums of money for RIPscrip graphics -- but the people running Web sites don't think twice about investing thousands of dollars for a fabulous look.

Despite all the flack we take from BBS sysops, we continue to support their efforts -- and we always will. But BBS sysops have to change with the times, and they have to be willing to invest to upgrade their systems to compete with (or complement) the Web.

On Christmas, TeleGrafix released the first multimedia Telnet browsers. RIPtel Visual Telnet is available now from our Web site at www.telegrafix.com. This is a huge step forward for the Internet, and it represents a salvation for BBS sysops by placing Telnet graphically on a higher level than the Web.

The serious professional operators will get on board the Visual Telnet
train, and they will live to see a brighter day.

From: dwittich@concentric.net (Doug Wittich)
Subject: MIR

>Well Amsat Journal is RIGHT but the MIR station decided
>after the fact to change.
>
>We have two large repeaters in Dallas on 145.190 and 145.210
>and that makes it a problem to catch the voice downlink.

And with nationwide APRS activity on 145.79, that's a problem for many, as well. Folks in Indianapolis want APRS to move from it's coordinated frequency. Seems like MIR could have researched a bit and tried to coordinate before they moved.

73

Doug

From: "Paul E. Traufler" <wintrak@traveller.com>
Subject: WinTrak Pro Release

WinTrak Pro New Release!

WinTrak Pro Version 4.5 has added and improved many areas in the program. The Rendered views have been improved along with several new views available also. This is just a small list of the many improvements made to the program. Remember this program is a full 32-bit version, do not accept any substitutions! Do not let those other programs fool you with the old, "It works under Win95", but in reality it is a Windows 3.1 16-bit program. Its your money, demand the best!

New Items:

Visible now satellites can be any of the 4 satellite groups.
Satellite elements statistics, such as oldest, newest and average age of elements.
Zoom in on the Render views.
Added plot the next 2 passes option to render views.
Automatic LF to CR-LF text file detection and correction. (UNIX to DOS Text conversion)
Mercator map added to the Rendered maps options.
Added Multi-Satellite 3D and Mercator maps Rendered views.
Added satellite labels to Rendered views.
Added option to set Sun terminator on the Render views.
Added satellite Rise/Set alarms, can play user recorded Wave files or provided Wave files.
Greatly improved help file with printed manual options included in help file.
Lowered the minimum satellite altitude to 90 km from the past 160 km.
This version works with Windows NT 4.0 now also.

The "players" ie Dave Larson N6JLH alias N6CO alias K6MIR and Miles
Mann WF1F were told well in advance that this was going to be a
problem with not only APRS, but also the Repeaters, they in turn I
would assume notified their contacts at AMSAT and ARRL and NASA and
SOUP, at any rate G3BGM also was told that especially here in the
states that pair would be a problem, and it was taken to the European
Amateur radio conference where the frequencies were decided upon. I
realized long ago that the doppler shift would bring it into
interference with both, and it does.. there is little hope. there is a
possibility they may try another pair, but slim. 73 DAVE

Subject: MIR info..

Dave, try 145.200 + 600 voice, 145.800 simplex paket,
437950 - 2200 pl 141.3 repeater, and 437.925 for a recorded
greeting from Mir. Good luck, and have fun.

From: jim ryan <sigma4@iol.ie>
Subject: new mir freq for 1997

Hello all ,
Just had a nice short contact with John KC5TZQ at 16:07 30-12-96
. It must be said that John is a very good operator as he worked several
stations over Europe , He also informed us that as of the first of
January 1997 they will change freq on 2meters as follows .

mir tx 145.800
mir rx 145.200

ie the reverse of now !!.
73 de Dave EI4HT and Jim EI3DP .

From: tkelso@afit.af.mil (TS Kelso)
Subject: NORAD Two-Line Orbital Element Sets (TLE922)

The most current orbital elements from the NORAD two-line element sets are
carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are
also available on this system.

Element sets (also updated daily) and some documentation and software are
available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the
directory pub/space.

As a service to the satellite user community, the most current of these
elements are uploaded weekly to sci.space.news and rec.radio.amateur.space.
This week's elements are provided below.

From: Susan Driggers <Insight@cris.com>
Subject: Total Newbie Looking for help

I am totally new to satellite communications and am looking for some
advice on the bare minimum needed to get started. I am operating on a very
restricted budget so anything that could be homebrewed would be
appreciated.
I currently have a HT 202 that I am dedicating to sattelite. Everything
else I will need advice on. THanks !

Yeah, I have the same problem with my IC-T7a. I can receive below 440, but
there's no way to transmit below 440Mhz. Arrgh.

Fellow Amateurs: Please read the first two paragraphs!

CLAWSON@TELEGRAFIX.COM (PAT CLAWSON) said to ALL in comp.bbs.misc:

Boardwatch may have abandoned the BBS sysop, but TeleGrafix is still standing strong with them. However, we think that BBS systems must become Internet-connected if they are to survive in a Webbed world.

First, we need to quit calling these online systems by the moniker "BBS." The term has come to reflect something on the order of ham radio -- low-rent communications run by amateurs. That may accurately reflect some BBS systems, but we've found that many sysops run very professional online businesses.

Second, we need to start emphasizing the Power of Telnet and talk about Telnet Sites, not BBS systems. A telnettable BBS or legacy system can do many things the Web can't. Most of the computer industry and public has been Web-washed (brainwashed) by all the press hype. They think the Web is all there is to the Internet/online experience. Just a couple of days ago, I was talking to the Internet reporter for one of America's most prestigious newspapers. He had never even heard of Telnet, didn't have a clue what it was -- and his news reports influence literally millions of Americans. BBS sysops and BBS system manufacturers need to refocus their efforts, and begin producing tools and content that take advantage of the Power of Telnet.

Third, Telnet Site operators (such as BBS sysops) must professionalize the look and feel of their systems. Most sysops make little investment in quality graphics for their systems. In a glitzy Web world, it is little wonder that the public is turned off by ANSI BBS systems no matter how if the content on them is of high quality. We constantly hear BBS sysops complain about having to pay what are very modest sums of money for RIPscrip graphics -- but the people running Web sites don't think twice about investing thousands of dollars for a fabulous look.

Despite all the flack we take from BBS sysops, we continue to support their efforts -- and we always will. But BBS sysops have to change with the times, and they have to be willing to invest to upgrade their systems to compete with (or complement) the Web.

On Christmas, TeleGrafix released the first multimedia Telnet browsers. RIPtel Visual Telnet is available now from our Web site at www.telegrafix.com. This is a huge step forward for the Internet, and it represents a salvation for BBS sysops by placing Telnet graphically on a higher level than the Web.

The serious professional operators will get on board the Visual Telnet
train, and they will live to see a brighter day.

Subject: MIR

>Well Amsat Journal is RIGHT but the MIR station decided
>after the fact to change.
>
>We have two large repeaters in Dallas on 145.190 and 145.210
>and that makes it a problem to catch the voice downlink.

And with nationwide APRS activity on 145.79, that's a problem for
many, as well. Folks in Indianapolis want APRS to move from it's
coordinated frequency. Seems like MIR could have researched a bit
and tried to coordinate before they moved.

From: "Paul E. Traufler" <wintrak@traveller.com>
Subject: WinTrak Pro Release

WinTrak Pro New Release!

WinTrak Pro Version 4.5 has added and improved many areas in the program.
The Rendered views have been improved along with several new views
available also. This is just a small list of the many improvements made to
the program. Remember this program is a full 32-bit version, do not accept
any substitutions! Do not let those other programs fool you with the old,
"It works under Win95", but in reality it is a Windows 3.1 16-bit program.
Its your money, demand the best!

New Items:

Visible now satellites can be any of the 4 satellite groups.
Satellite elements statistics, such as oldest, newest and average age of
elements.
Zoom in on the Render views.
Added plot the next 2 passes option to render views.
Automatic LF to CR-LF text file detection and correction. (UNIX to DOS
Text conversion)
Mercator map added to the Rendered maps options.
Added Multi-Satellite 3D and Mercator maps Rendered views.
Added satellite labels to Rendered views.
Added option to set Sun terminator on the Render views.
Added satellite Rise/Set alarms, can play user recorded Wave files or
provided Wave files.
Greatly improved help file with printed manual options included in help
file.
Lowered the minimum satellite altitude to 90 km from the past 160 km.
This version works with Windows NT 4.0 now also.

The "players" ie Dave Larson N6JLH alias N6CO alias K6MIR and Miles
Mann WF1F were told well in advance that this was going to be a
problem with not only APRS, but also the Repeaters, they in turn I
would assume notified their contacts at AMSAT and ARRL and NASA and
SOUP, at any rate G3BGM also was told that especially here in the
states that pair would be a problem, and it was taken to the European
Amateur radio conference where the frequencies were decided upon. I
realized long ago that the doppler shift would bring it into
interference with both, and it does.. there is little hope. there is a
possibility they may try another pair, but slim. 73 DAVE

Subject: new mir freq for 1997

Hello all ,
Just had a nice short contact with John KC5TZQ at 16:07 30-12-96
. It must be said that John is a very good operator as he worked several
stations over Europe , He also informed us that as of the first of
January 1997 they will change freq on 2meters as follows .

mir tx 145.800
mir rx 145.200

ie the reverse of now !!.
73 de Dave EI4HT and Jim EI3DP .

From: tkelso@afit.af.mil (TS Kelso)
Subject: NORAD Two-Line Orbital Element Sets (TLE922)

The most current orbital elements from the NORAD two-line element sets are
carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are
also available on this system.

Element sets (also updated daily) and some documentation and software are
available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the
directory pub/space.

As a service to the satellite user community, the most current of these
elements are uploaded weekly to sci.space.news and rec.radio.amateur.space.
This week's elements are provided below.

From: Susan Driggers <Insight@cris.com>
Subject: Total Newbie Looking for help

I am totally new to satellite communications and am looking for some
advice on the bare minimum needed to get started. I am operating on a very
restricted budget so anything that could be homebrewed would be
appreciated.
I currently have a HT 202 that I am dedicating to sattelite. Everything
else I will need advice on. THanks !

Yeah, I have the same problem with my IC-T7a. I can receive below 440, but
there's no way to transmit below 440Mhz. Arrgh.

Fellow Amateurs: Please read the first two paragraphs!

CLAWSON@TELEGRAFIX.COM (PAT CLAWSON) said to ALL in comp.bbs.misc:

Boardwatch may have abandoned the BBS sysop, but TeleGrafix is still standing
strong with them. However, we think that BBS systems must become
Internet-connected if they are to survive in a Webbed world.

First, we need to quit calling these online systems by the moniker "BBS."
The term has come to reflect something on the order of ham radio -- low-rent
communications run by amateurs. That may accurately reflect some BBS
systems, but we've found that many sysops run very professional online
businesses.

Second, we need to start emphasizing the Power of Telnet and talk about
Telnet Sites, not BBS systems. A telnettable BBS or legacy system can do
many things the Web can't. Most of the computer industry and public has
been Web-washed (brainwashed) by all the press hype. They think the Web
is all there is to the Internet/online experience. Just a couple of days
ago, I was talking to the Internet reporter for one of America's most
prestigious newspapers. He had never even heard of Telnet, didn't have a
clue what it was -- and his news reports influence literally millions of
Americans. BBS sysops and BBS system manufacturers need to refocus their
efforts, and begin producing tools and content that take advantage of the
Power of Telnet.

Third, Telnet Site operators (such as BBS sysops) must professionalize the
look and feel of their systems. Most sysops make little investment in
quality graphics for their systems. In a glitzy Web world, it is little
wonder that the public is turned off by ANSI BBS systems no matter how if

the content on them is of high quality. We constantly hear BBS sysops complain about having to pay what are very modest sums of money for RIPscrip graphics -- but the people running Web sites don't think twice about investing thousands of dollars for a fabulous look.

Despite all the flack we take from BBS sysops, we continue to support their efforts -- and we always will. But BBS sysops have to change with the times, and they have to be willing to invest to upgrade their systems to compete with (or complement) the Web.

On Christmas, TeleGrafix released the first multimedia Telnet browsers. RIPtel Visual Telnet is available now from our Web site at www.telegrafix.com. This is a huge step forward for the Internet, and it represents a salvation for BBS sysops by placing Telnet graphically on a higher level than the Web.

The serious professional operators will get on board the Visual Telnet train, and they will live to see a brighter day.

>Well Amsat Journal is RIGHT but the MIR station decided
>after the fact to change.
>
>We have two large repeaters in Dallas on 145.190 and 145.210
>and that makes it a problem to catch the voice downlink.

And with nationwide APRS activity on 145.79, that's a problem for
many, as well. Folks in Indianapolis want APRS to move from it's
coordinated frequency. Seems like MIR could have researched a bit
and tried to coordinate before they moved.

From: "Paul E. Traufler" <wintrak@traveller.com>
Subject: WinTrak Pro Release

WinTrak Pro New Release!

WinTrak Pro Version 4.5 has added and improved many areas in the program.
The Rendered views have been improved along with several new views
available also. This is just a small list of the many improvements made to
the program. Remember this program is a full 32-bit version, do not accept
any substitutions! Do not let those other programs fool you with the old,
"It works under Win95", but in reality it is a Windows 3.1 16-bit program.
Its your money, demand the best!

New Items:

Visible now satellites can be any of the 4 satellite groups.
Satellite elements statistics, such as oldest, newest and average age of
elements.
Zoom in on the Render views.
Added plot the next 2 passes option to render views.
Automatic LF to CR-LF text file detection and correction. (UNIX to DOS
Text conversion)

Mercator map added to the Rendered maps options.
Added Multi-Satellite 3D and Mercator maps Rendered views.
Added satellite labels to Rendered views.
Added option to set Sun terminator on the Render views.
Added satellite Rise/Set alarms, can play user recorded Wave files or
provided Wave files.
Greatly improved help file with printed manual options included in help
file.
Lowered the minimum satellite altitude to 90 km from the past 160 km.
This version works with Windows NT 4.0 now also.

The "players" ie Dave Larson N6JLH alias N6CO alias K6MIR and Miles
Mann WF1F were told well in advance that this was going to be a
problem with not only APRS, but also the Repeaters, they in turn I
would assume notified their contacts at AMSAT and ARRL and NASA and
SOUP, at any rate G3BGM also was told that especially here in the
states that pair would be a problem, and it was taken to the European
Amateur radio conference where the frequencies were decided upon. I
realized long ago that the doppler shift would bring it into
interference with both, and it does.. there is little hope. there is a
possibility they may try another pair, but slim. 73 DAVE

Subject: NORAD Two-Line Orbital Element Sets (TLE922)

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

****

Subject: Total Newbie Looking for help
```

I am totally new to satellite communications and am looking for some
advice on the bare minimum needed to get started. I am operating on a very
restricted budget so anything that could be homebrewed would be
appreciated.
I currently have a HT 202 that I am dedicating to sattelite. Everything
else I will need advice on. THanks !

2872. ICOM CT-17 (CI-V) Interface programs out there?

Newsgroup: rec.radio.amateur.space
Date: 1996-12-31 00:00:00 UTC
From: Tom Valenti <valenti@eskimo.com>
Message-ID: <32C95D6A.4EC@eskimo.com>
Source record: 20449
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.space

Happy New Year from Seattle,

I am looking for bare bones, or better, shareware programs used by us to tie our rigs to the PC. My shack will be automating an IC-R7000, IC-735, IC-275H, and a IC-475H. If you have a program (BOTH binary and source code) I would love to download it. Just let me know where to get it. Anybody really close by, I'll buy lunch for the first few! I work near Boeing Field. 73

2874. NORAD Two-Line Orbital Element Set Format

Newsgroup: rec.radio.amateur.space
Date: 1996-12-31 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <5abv68$f6l@blackbird.afit.af.mil>
Source record: 20451

As a service to the satellite user community, the following description of the NORAD two-line orbital element set format is uploaded to sci.space.news and rec.radio.amateur.space on a monthly basis. The most current orbital elements from the NORAD two-line element sets are carried on the *NEW* Celestial WWW,

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. In addition, element sets (updated daily) and some documentation and software are also available via anonymous ftp from

archive.afit.af.mil (129.92.1.66)

in the directory pub/space.

==========

Data for each satellite consists of three lines in the following format:

```
AAAAAAAAAAAAAAAAAAAAA
1 NNNNNU NNNNNAAA NNNNN.NNNNNNNN +.NNNNNNNN +NNNNN-N +NNNNN-N N NNNNN
2 NNNNN NNN.NNNN NNN.NNNN NNNNNNN NNN.NNNN NNN.NNNN NN.NNNNNNNNNNNNN
```

Line 0 is a twenty-two-character name (this change is being made to be consistent with the name length in the NORAD SATCAT).

Lines 1 and 2 are the standard Two-Line Orbital Element Set Format identical to that used by NORAD and NASA. The format description is:

```
Line 1
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
10-11 International Designator (Last two digits of launch year)
12-14 International Designator (Launch number of the year)
15-17 International Designator (Piece of launch)
19-20 Epoch Year (Last two digits of year)
21-32 Epoch (Julian Day and fractional portion of the day)
34-43 First Time Derivative of the Mean Motion
or Ballistic Coefficient (Depending on ephemeris type)
45-52 Second Time Derivative of Mean Motion (decimal point assumed;
blank if N/A)
54-61 BSTAR drag term if GP4 general perturbation theory was used.
Otherwise, radiation pressure coefficient. (Decimal point assumed)
63-63 Ephemeris type
65-68 Element number
69-69 Check Sum (Modulo 10)
```

(Letters, blanks, periods, plus signs = 0; minus signs = 1)

Line 2
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
09-16 Inclination [Degrees]
18-25 Right Ascension of the Ascending Node [Degrees]
27-33 Eccentricity (decimal point assumed)
35-42 Argument of Perigee [Degrees]
44-51 Mean Anomaly [Degrees]
53-63 Mean Motion [Revs per day]
64-68 Revolution number at epoch [Revs]
69-69 Check Sum (Modulo 10)

All other columns are blank or fixed.

Example:

NOAA 6
1 11416U 86 50.28438588 0.00000140 67960-4 0 5293
2 11416 98.5105 69.3305 0012788 63.2828 296.9658 14.24899292346978

Yeah, I have the same problem with my IC-T7a. I can receive below 440, but
there's no way to transmit below 440Mhz. Arrgh.

Subject: Please Read!

Fellow Amateurs: Please read the first two paragraphs!

CLAWSON@TELEGRAFIX.COM (PAT CLAWSON) said to ALL in comp.bbs.misc:

Boardwatch may have abandoned the BBS sysop, but TeleGrafix is still standing
strong with them. However, we think that BBS systems must become
Internet-connected if they are to survive in a Webbed world.

First, we need to quit calling these online systems by the moniker "BBS."
The term has come to reflect something on the order of ham radio -- low-rent
communications run by amateurs. That may accurately reflect some BBS
systems, but we've found that many sysops run very professional online
businesses.

Second, we need to start emphasizing the Power of Telnet and talk about
Telnet Sites, not BBS systems. A telnettable BBS or legacy system can do
many things the Web can't. Most of the computer industry and public has
been Web-washed (brainwashed) by all the press hype. They think the Web
is all there is to the Internet/online experience. Just a couple of days
ago, I was talking to the Internet reporter for one of America's most
prestigious newspapers. He had never even heard of Telnet, didn't have a
clue what it was -- and his news reports influence literally millions of
Americans. BBS sysops and BBS system manufacturers need to refocus their
efforts, and begin producing tools and content that take advantage of the
Power of Telnet.

Third, Telnet Site operators (such as BBS sysops) must professionalize the
look and feel of their systems. Most sysops make little investment in
quality graphics for their systems. In a glitzy Web world, it is little
wonder that the public is turned off by ANSI BBS systems no matter how if
the content on them is of high quality. We constantly hear BBS sysops
complain about having to pay what are very modest sums of money for
RIPscrip graphics -- but the people running Web sites don't think twice

about investing thousands of dollars for a fabulous look.

Despite all the flack we take from BBS sysops, we continue to support
their efforts -- and we always will. But BBS sysops have to change with
the times, and they have to be willing to invest to upgrade their systems
to compete with (or complement) the Web.

On Christmas, TeleGrafix released the first multimedia Telnet browsers.
RIPtel Visual Telnet is available now from our Web site at
www.telegrafix.com. This is a huge step forward for the Internet, and it
represents a salvation for BBS sysops by placing Telnet graphically on a
higher level than the Web.

The serious professional operators will get on board the Visual Telnet
train, and they will live to see a brighter day.

>Well Amsat Journal is RIGHT but the MIR station decided
>after the fact to change.
>
>We have two large repeaters in Dallas on 145.190 and 145.210
>and that makes it a problem to catch the voice downlink.

And with nationwide APRS activity on 145.79, that's a problem for
many, as well. Folks in Indianapolis want APRS to move from it's
coordinated frequency. Seems like MIR could have researched a bit
and tried to coordinate before they moved.

From: "Paul E. Traufler" <wintrak@traveller.com>
Subject: WinTrak Pro Release

WinTrak Pro New Release!

WinTrak Pro Version 4.5 has added and improved many areas in the program.
The Rendered views have been improved along with several new views
available also. This is just a small list of the many improvements made to
the program. Remember this program is a full 32-bit version, do not accept
any substitutions! Do not let those other programs fool you with the old,
"It works under Win95", but in reality it is a Windows 3.1 16-bit program.
Its your money, demand the best!

New Items:

Visible now satellites can be any of the 4 satellite groups.
Satellite elements statistics, such as oldest, newest and average age of
elements.
Zoom in on the Render views.
Added plot the next 2 passes option to render views.
Automatic LF to CR-LF text file detection and correction. (UNIX to DOS
Text conversion)
Mercator map added to the Rendered maps options.
Added Multi-Satellite 3D and Mercator maps Rendered views.
Added satellite labels to Rendered views.
Added option to set Sun terminator on the Render views.
Added satellite Rise/Set alarms, can play user recorded Wave files or

provided Wave files.
Greatly improved help file with printed manual options included in help
file.
Lowered the minimum satellite altitude to 90 km from the past 160 km.
This version works with Windows NT 4.0 now also.

The "players" ie Dave Larson N6JLH alias N6CO alias K6MIR and Miles
Mann WF1F were told well in advance that this was going to be a
problem with not only APRS, but also the Repeaters, they in turn I
would assume notified their contacts at AMSAT and ARRL and NASA and
SOUP, at any rate G3BGM also was told that especially here in the
states that pair would be a problem, and it was taken to the European
Amateur radio conference where the frequencies were decided upon. I
realized long ago that the doppler shift would bring it into
interference with both, and it does.. there is little hope. there is a
possibility they may try another pair, but slim. 73 DAVE

Subject: MIR info..

Dave, try 145.200 + 600 voice, 145.800 simplex paket,
437950 - 2200 pl 141.3 repeater, and 437.925 for a recorded
greeting from Mir. Good luck, and have fun.

From: jim ryan <sigma4@iol.ie>
Subject: new mir freq for 1997

Hello all ,
Just had a nice short contact with John KC5TZQ at 16:07 30-12-96
. It must be said that John is a very good operator as he worked several
stations over Europe , He also informed us that as of the first of
January 1997 they will change freq on 2meters as follows .

mir tx 145.800
mir rx 145.200

ie the reverse of now !!.
73 de Dave EI4HT and Jim EI3DP .

From: tkelso@afit.af.mil (TS Kelso)
Subject: NORAD Two-Line Orbital Element Sets (TLE922)

The most current orbital elements from the NORAD two-line element sets are
carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

From: Susan Driggers <Insight@cris.com>
Subject: Total Newbie Looking for help

I am totally new to satellite communications and am looking for some
advice on the bare minimum needed to get started. I am operating on a very
restricted budget so anything that could be homebrewed would be
```

appreciated.
I currently have a HT 202 that I am dedicating to sattelite. Everything
else I will need advice on. THanks !

2877. Long Delayed Echo mysteries...

Long Delayed Echo mysteries...

Hi,
I'm doing some research for a documentary about anomalies. One of the subjects I'm interested in is that of LDE's. I have done some reading on the subject and noted a few experiments - however, I'm looking for new information & experiences which may help to throw more light on the matter.

Of especial interest is the geographic "preferences" of LDEs. I noted for example that some evidence pointed to LDEs being more prevalent in the Polar regions. Do LDE's have any other preferences? Also, I'm interested in the various characteristics of the LDEs. I noted some saying that it tends to occur when "opening up" a frequency.

If you have had any experiences, or know of further literature or people I can consult - I would very much appreciate it.

I have posted this in several newsgroups since I wasn't quite sure which is the best place to go, so if this is out of place - I apologise.

If you can help in any way, kindly reply by e-mail. Thanks.

Cheers, Jan...
* Ignorant people think it's the noise which fighting cats make that is aggravating, but it ain't so; it's the sickening grammar they use. (Mark Twain)
* No one's life, liberty or property is safe while the legislature is in session. (Mark Twain)
* What do politicians and porn stars have in common? They're both experts at changing positions in front of the camera.
